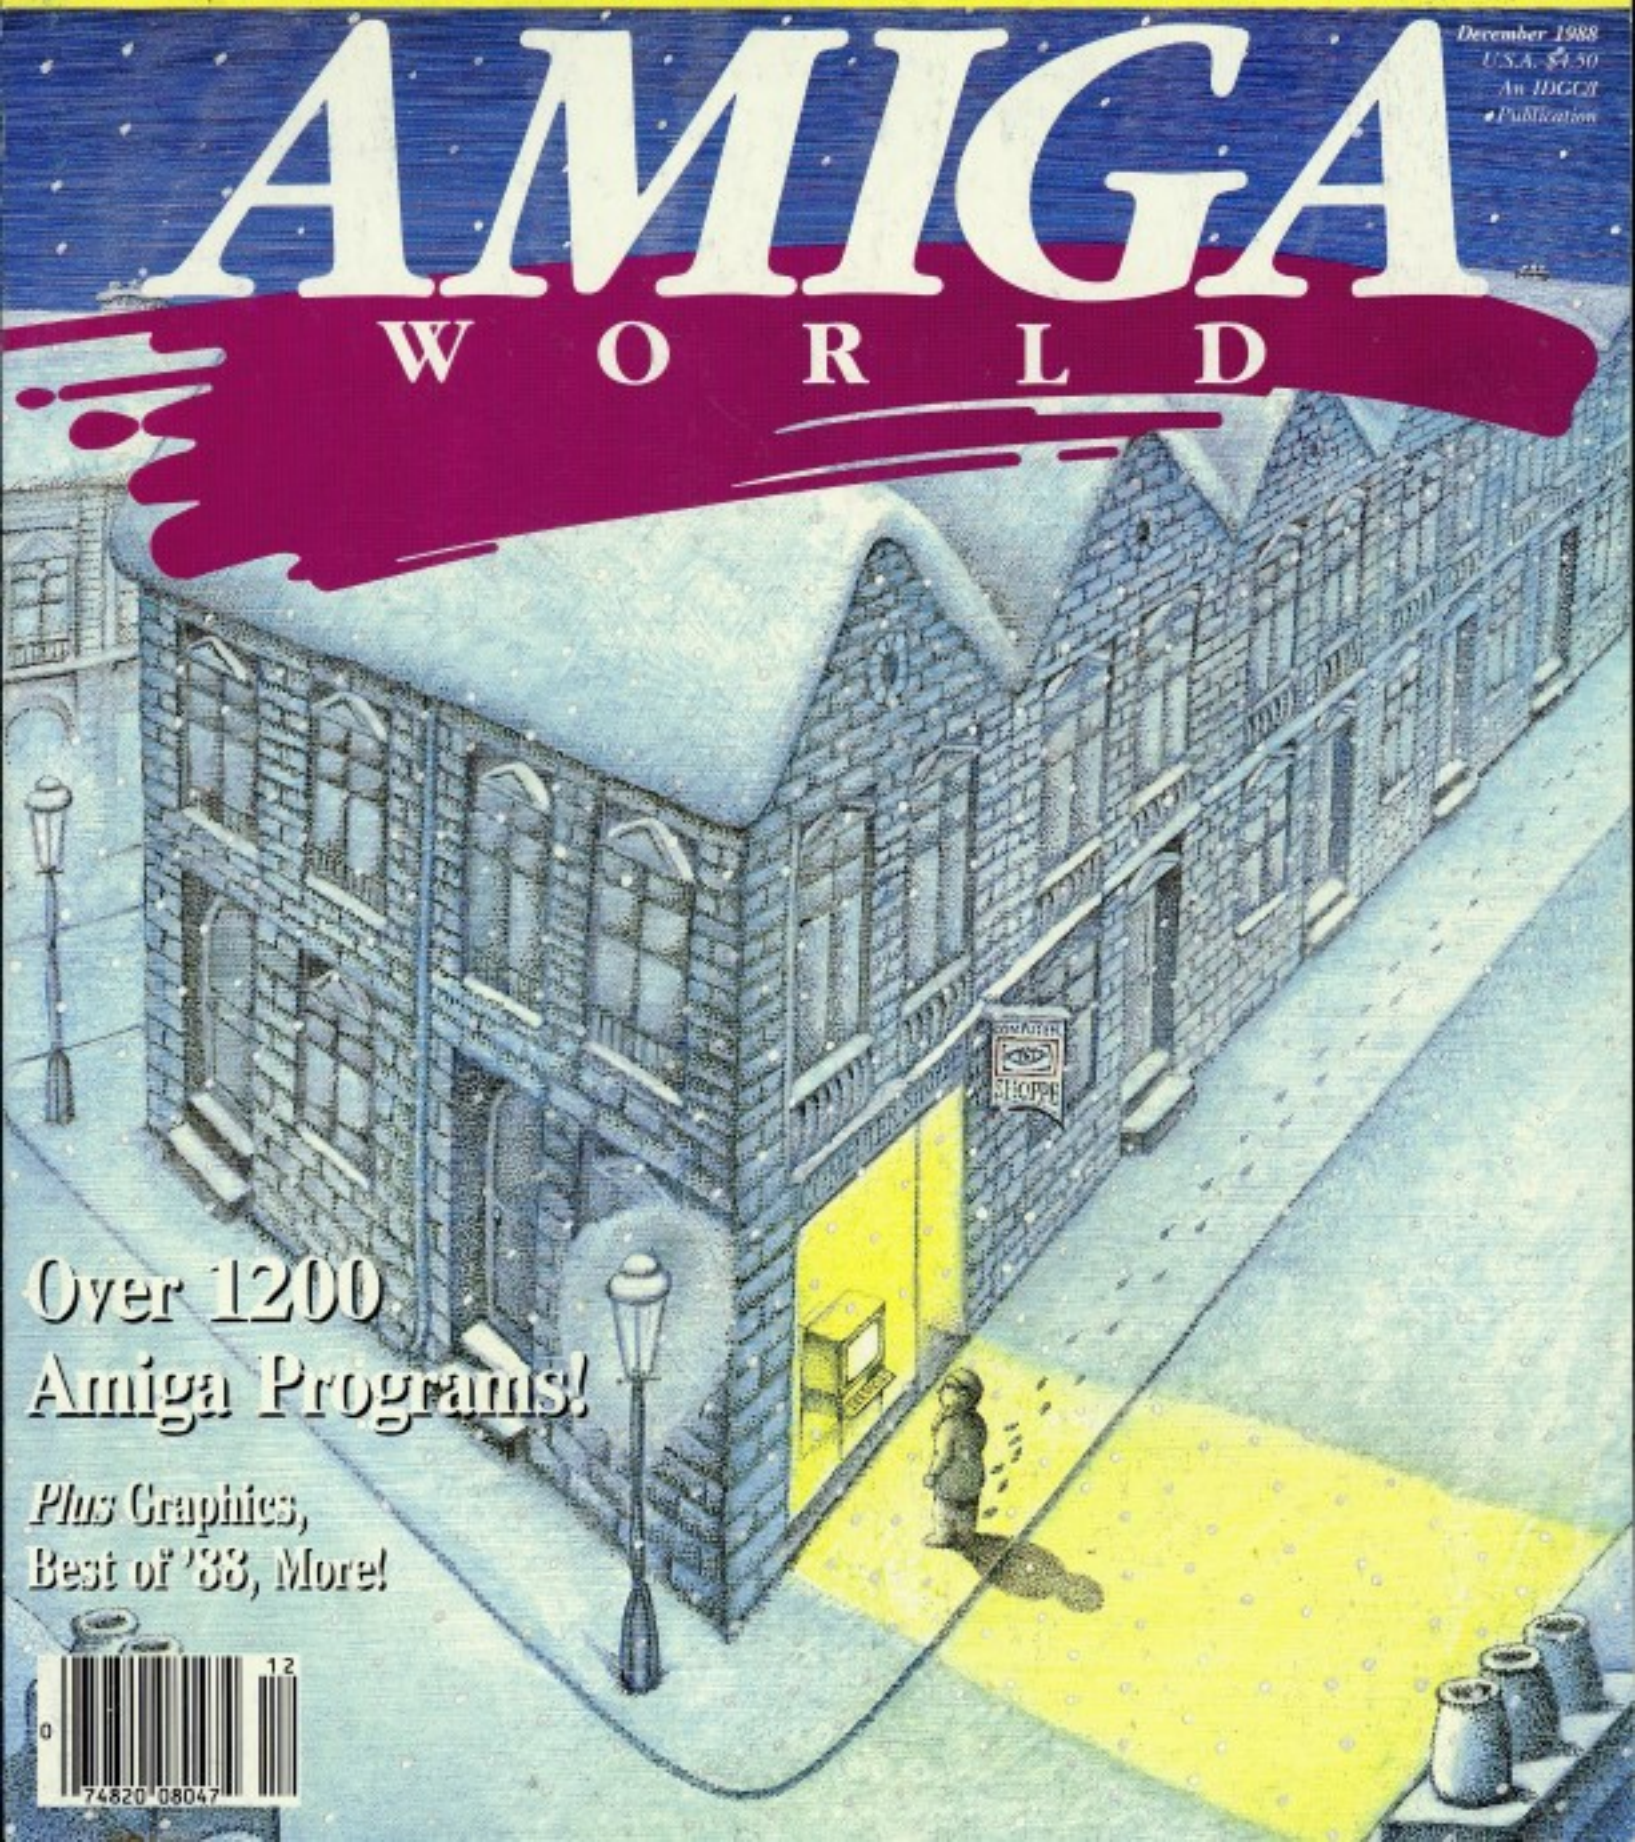
An IDG/I
Publication



Over 1200 Amiga Programs!

Plus Graphics, Best of '88, More!

0 74820 08047 12

The Ultimate Publishing Tool.

Gold Disk's Professional Page is, quite simply, the ultimate desktop publishing program for the Amiga. But don't take our word for it. Listen to what the experts have to say:

AmigaWorld, May 1988
"Professional Page decimates its Amiga competition...[it will] take us to entirely new realms in desktop publishing."

Electronic Composition & Imaging, April 1988
"Innovative... Professional Page can hold its head up in the company of such heavy hitters as Ventura Publisher and PageMaker...the program is fast, its features are well integrated."

Personal Publishing, September 1988
"Professional Page is the flagship of the Amiga Desktop Publishing world."

Vellum Print & Graphic
"After years of preparing black and white camera-ready art for color printing, we can now design and compose in color and produce plate-ready film."

J. K. Steele, Freelance Graphic Designer.
"Professional Page is opening doors for graphic designers and artists... especially freelancers like me. It cuts down layout time, keeps me out of the typeshop, and allows me to show my clients a greater variety of design options without costing a fortune."

Circle 150 on Reader Service card.

So why not use the best? Call Gold Disk, today, at 1-800-387-8192 and order your copy of Professional Page for $395.00, or stop in to see your local Amiga dealer.

This entire ad was created and color separated using Professional Page.

Professional Draw

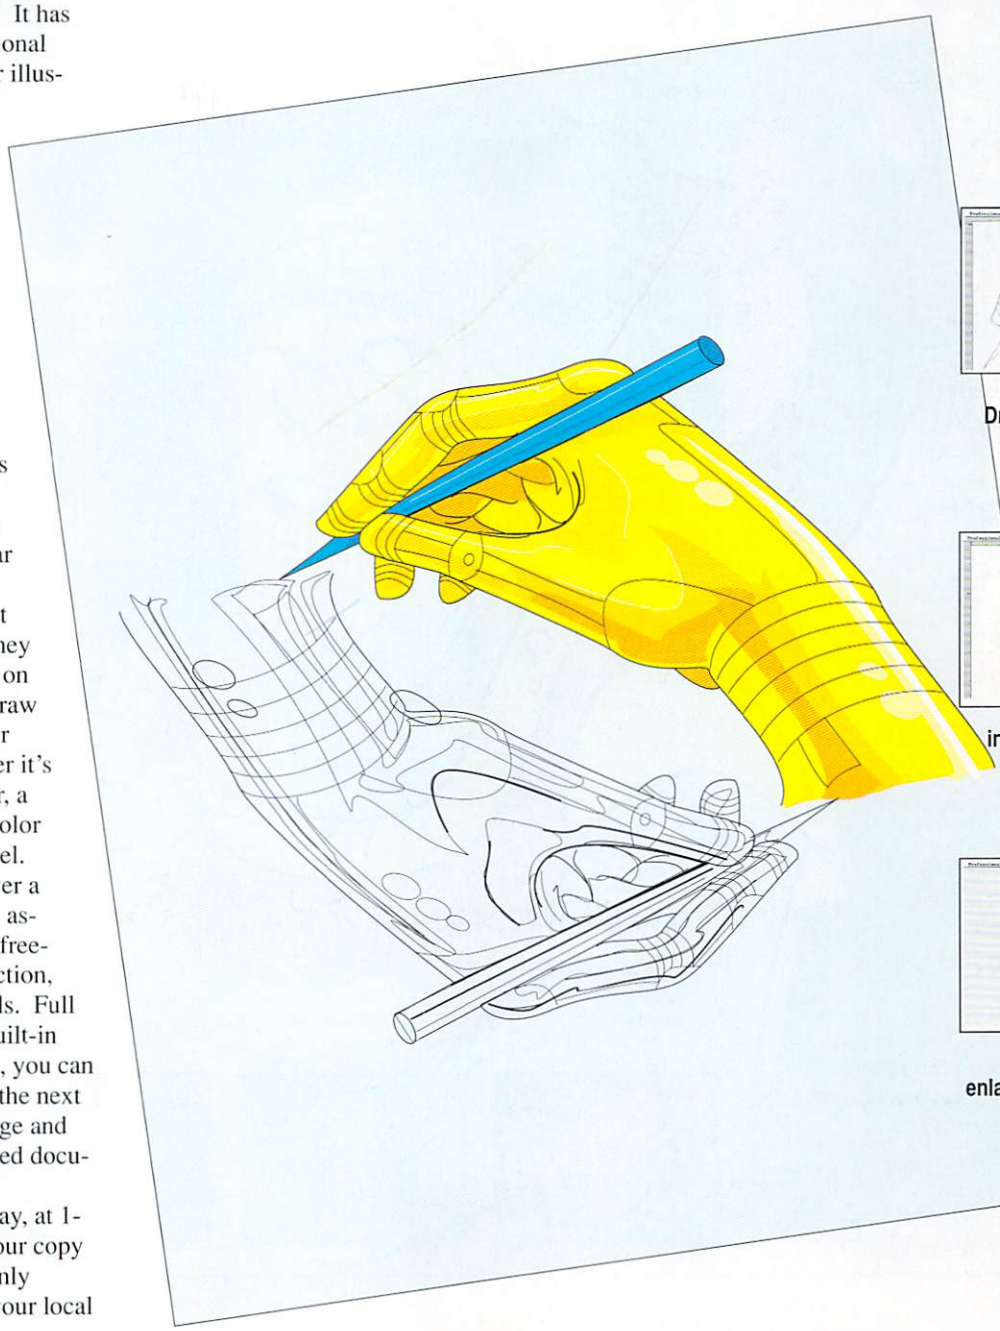
The Ultimate Drawing Tool.

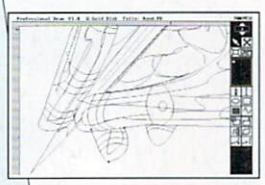
Gold Disk introduces the first serious illustration program for the Amiga: Professional Draw. It has opened the door to professional quality, camera-ready color illustration on the Amiga. And it is redrawing the boundaries of Amiga generated graphic art and design.

That's because until now, Amiga artists have had to settle for bit-mapped painting programs that leave you with jagged circles and "stairstep" diagonal lines. Not Professional Draw. It's a *structured* graphics program that smoothes out the "jaggies", no matter how far you enlarge your pictures. So now your graphics don't just look good on screen, they look good where it counts: on paper. And Professional Draw takes full advantage of your printer's resolution, whether it's a 2400 DPI phototypesetter, a PostScript laser printer, a color inkjet, or a dot-matrix model.

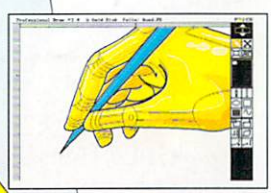
You'll get access to over a million colors. A powerful assortment of geometric and free-hand drawing tools. Reflection, rotation, and distortion tools. Full text capabilities. Even a built-in color separator. Best of all, you can import your drawings into the next upgrade of Professional Page and bring your desktop published documents to life.

So call Gold Disk, today, at 1-800-387-8192 and order your copy of Professional Draw for only $199.95, or stop in to see your local Amiga dealer.

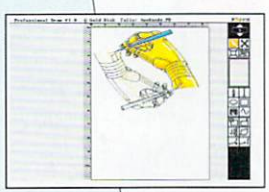




Draw in wireframe, or...



in full color WYSIWYG



clone, rotate, and enlarge...With no "jaggies".

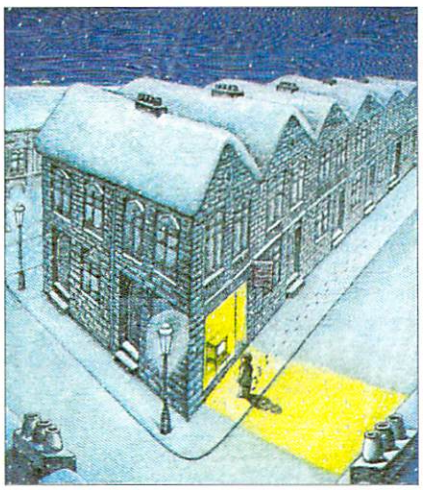
VOLUME 4, NUMBER 12 DECEMBER 1988

CONTENTS



When we put together last year's Great Software Buyer's Guide, we were impressed with the fact that there were over 650 individual programs for the Amiga—a far cry from the 1985-86 days when there was virtually no third-party support for the system. But now, just one year later, we've come up with an astonishing figure of over 1200 programs. What's been happening over the past 12 months? It would appear that the Amiga market has gone from growing to booming—and that's good news for everyone!

FEATURES

THE GREAT SOFTWARE BUYER'S GUIDE *Compiled by Barbara Gefvert and Jan Jackson* . . . 19
The *ultimate* Amiga software reference. Our buyer's guide gives you the what, where, who, and how much for every program available for the Amiga—from business tools to education to games to graphics to programming aids to esoteric utilities (and a whole lot more). This year's guide makes *War and Peace* look like a short story, with over 1200 programs and a complete list of all Amiga software manufacturers and distributors.

ARTICLES

LEARNING FROM A "PRO" *By Bill Catchings and Mark L. Van Name* 76
This tutorial for the BASIC amateur presents Superbase Professional's powerful DML: a BASIC-derived programming language that allows you to perform a decathlon of data-management tasks.

ACCENT ON GRAPHICS *By Joel Hagen* 90
We begin an occasional series of tips and techniques from a well-known Amiga graphics artist who will help you create richer, more imaginative images with your Amiga. Part 1: Airbrush Painting.

1988 *AMIGAWORLD* READERS' CHOICE AWARDS 102
Find out what the most discerning critics in the world—your fellow Amiga users and *AmigaWorld* readers—feel are the best and the brightest in seven broad categories of Amiga products.

COLUMNS

ZEITGEIST 6
It seems the editor is trying to demonstrate the relationship between our massive software buyer's guide and the mainstream of Judeo-Christian tradition along with the linguistic heritage of the entire Indo-European language family. . . hey, after all, it's *his* column!

INFO.PHILE *By Mark L. Van Name and Bill Catchings* 94
Our AmigaDOS experts wrap up their five-part "mini-series" on the new features of the 1.3 operating sytem with a look at 1.3's new recoverable-RAM disk called RAD:.

NOTE: Because of the length of the Software Buyer's Guide, BASIC BY THE NUMBERS will not run this month. Watch for Bob in the next issue.

DEPARTMENTS

REPARTEE 8
Seasonal greetings and grousings from the readers.

NOTEPAD 10
More news on the Treasure Hunt (with a list of consolation winners), plus an Amiga news report from the UK.

HORS D'OEUVRES 12
Tasty Holiday morsels of tips and techniques from *AmigaWorld* readers.

REVIEWS 14
Deluxe PhotoLab / EXP-1000 / X-Specs 3D / WordPerfect Library / Ultra DOS Utilities and DiskMaster. **Games**: Death Sword / Ports of Call.

WHAT'S NEW? 122
On special delivery from the North Pole comes a sack of new Amiga products for Holiday shoppers.

HELP KEY 128
St. Nicholou Wallace has been down a lot of chimneys this month battling the grinches who've been fouling up your equipment.

COVER ILLUSTRATION BY PETER SIS

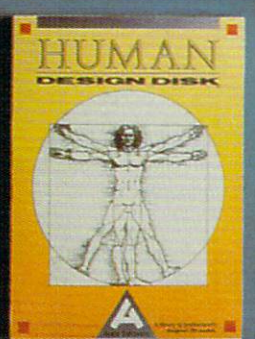
Don't Start from Scratch

Use 3D Design Disks!

A collection of professionally designed 3D models and components for use with Videoscape 3D*, Modeler 3D*, Sculpt 3D* or Sculpt-Animate 3D*.

Architectural Design™
Create 3D renderings of your dream house or build an entire 3D city from the ground up. Visualize and render real-world architecture. Component parts include: doors, windows, arches, roofs, walls, stairways and a variety of architectural constructs.

Future Design™
Get a fast start on your 3D explorations with this modular construction set of three dimensional objects that include everything you need to build spacecraft, space stations, bases, vehicles, robots and androids to create your future 3D world.



Human Design™
Populate your 3D universe! This disk includes complete male and female prototypes in skeletal form with complex head and hand structures for startling realism and detail. Modify figures to create the infinite variety of the human form.

Microbot Design™
Advanced robotic designs and component parts are featured on this disk for a variety of 3D applications. Use these detailed, surrealistic modules to create humanoid and alien cyborgs. Comes complete with blueprints, models and design tips.

We Feel It Is Unfair Of The Major Software Companies To Avoid The AMIGA.

Publishing Partner Professional,™ designed to be better than the desktop publishing "standard."

Publishing Partner Professional	Pagemaker
• We think desktop publishing should be enjoyable. Our user interface reflects this — have fun! And, if you need help, look in the manual, it even has an index!	• There are books written on how to use it.
• Your text will flow automatically around any irregular-shaped graphics giving a very professional look quickly.	• A picture tells a thousand words — so who needs words?
• Create crisp-looking, readable paragraphs. You can, with our auto-hyphenation, auto kerning, user definable kerning pairs, and auto-leading control all in increments down to 1/3600th of an inch!	• They knew these functions are essential but leading only down to 1/2 a point?
• Import those beautiful Amiga graphics from virtually any art program and print them in color or shades of gray. Or you can draw them as you go with our complete graphics toolbox.	• Amiga graphics?
• And, if you spell something wrong, the spell checking feature will find it for you, saving you time and perhaps embarrassment.	• Hopefully you are a good speller.
• Import from most all word processors including those with ASCII or IFF text formatting or have them running in the background.	• It is vitally important to support word processors and they knew this.
• We include drivers for virtually every printer, dot matrix or laser at no extra charge. So, now, you can create beautiful documents using the printer you already own.	• They also realized that if the printer support is weak, why bother?
• Need to change a word in one place or throughout the document? Our search and replace feature will make it quick and easy for you.	• Do it right the first time.
• It will always look great quickly, using our premade style sheets. Or, do it yourself with the tag and master page system.	• It would sell better if they did.
• You are very precise and you need flexibility, so our font point size range is from 1/50th of a point to 1.310 points in 1/50th of a point increments! And, we use scalable fonts so no jaggies!	• If you are average, the range of 4 to 127 points one point at a time should suffice.
• You can view your document in 50%, full width, full page, multiple page, actual size, or 200%, or set your own between 15 and 999%!	• You can view your document in only the five different ways they have picked for you.
• We don't copy protect.	• They too, know that professionals don't cheat.
• You can open multiple windows with different documents or different pages and go from one to the other editing as you go.	• Facing pages only please.

Publishing Partner Professional™ — the new standard. Aggressively priced at only $199.95.

ATTENTION PageSetter OWNERS! We think you will like ours better. We are so sure, that for only $50 we will send it to you. Call (314) 894-8608 or send your program disk and $50 plus $5 for shipping to Soft Logik. This is a limited-time offer.

SOFT LOGIK™

ZEITGEIST

Ho. That's enough Xmas rambling for now.

On to the good stuff.

"Think of this as our holiday offering."

IN THIS OVERSTUFFED issue you will find the ultimate, definitive, all encompassing, once-a-year, mundo-macho software buyers guide! If it runs on an Amiga, it is in here somewhere, and if it isn't listed in these pages, then either you don't need it, the company never told us about it, or we made a mistake (highly unlikely, but stranger things have happened).

We spent a lot of effort pulling together this list of software. We created a database of every known company on the face of the planet, sent it off to our team of psychics who then divined which companies have people working for them who have heard the word "Amiga." That list was promptly shredded.

We then translated the word "guide" into many diverse and archaic languages (not Swahili, though) and determined the pancultural impact that tongue twisters have had on preschool teachers in the $15–25,000 income range. Those results we threw away as soon as they were generated (so that it didn't effect the overall random skewing of the guide compilation).

In the instances where exhaustive statistical analysis revealed a correlation between fingernail biting and penumbral eclipses falling in odd years, we used a highly sophisticated and somewhat arbitrary AI (artificial ignorance) program to select the companies we actually called. If they answered on the third ring, we hung up; if they answered on the fifth ring, they usually hung up, and if they didn't answer at all, then we just guessed what they were doing.

Occasionally, we ended up in communication with a manufacturer who was actually producing Amiga software (this kind of thing is almost unavoidable when you are in this business). If they couldn't be put off with a barrage of insulting remarks and insisted on telling us about their product, then we asked a series of yes-or-no questions to determine the exact nature of the software. "Are you drinking coffee at this moment?," "Do you believe in trans-channeling?," "What color is the rug in your office?" These and other marginally relevant queries were usually enough to discourage even the most exuberant marketing person.

Despite our indifference (some might say incompetence), lists just seemed to appear. Perhaps it was fate, or Karma, or the hand of some unseen force. I believe the real reason we did this guide was that a simple list was much easier to put together than a bunch of articles with illustrations, topics, and all those different words. Whatever the reason, we somehow managed to finish it, so here it is.

The *AmigaWorld* Software Buyers Guide. Like Speigel, Sears, and whatever the name of that catalog is that has all the chocolate logs and cheeze balls that everyone gets but never remembers to order from even though they were only going to order something for themselves anyway, all rolled into one.

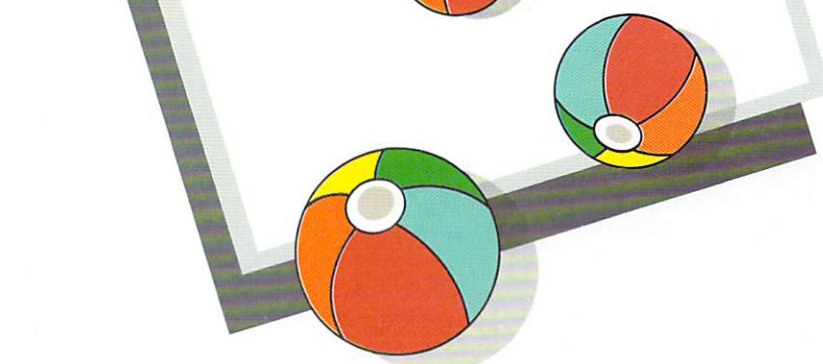
Think of this as our holiday offering. A bit of cranberry and some gravy on a turkey TV dinner. A few new buttered kernels strung on an aluminum tree. A wreath stolen from your door. A white plastic Santa leaning, flashing, waving to no one in your yard. Something new to read when the re-re-run Xmas specials on television have you on the verge of Santacide. More than just another tie or pocket calculator. Beyond the Grinch and Burley Ives, the Comos and the Scrooges. This is the real thing. The true spirit of giving. Just have your credit card ready and happy, happy ho.

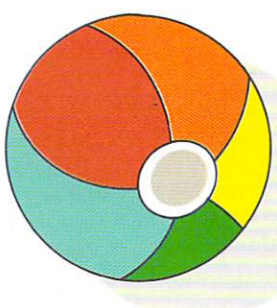
Guy Wright

simply the best!

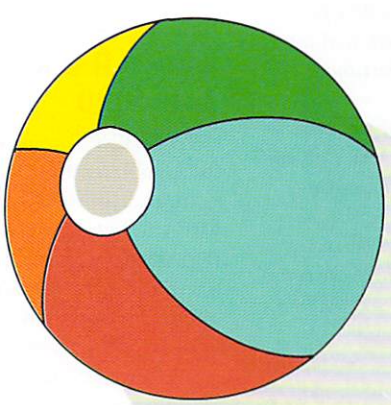
PAGE flipper™ PLUS F/X

PAGEflipper™ PLUS F/X
Powerful Cel Animation Editor





- smooth, fast animation in any resolution
- powerful compression
- easy to add/edit static or dynamic backgrounds and foregrounds
- library of preset effects (transitions)
- create your own transitions easily
- interactive context-sensitive editor makes changes simple
- compact player program allows you to distribute your animations



Animates ALL IFF Images. Particularly Productive 3D Animation with PageRender 3D.

WHAT THEY SAY

Media: "This definitely looks like a very hot new animation package..."

Users: "PFX is wonderful!!!"

"This is an excellent program. The user interface is transparent, as it should be".

"The manual is well written... this is a truly great program, easy to use, friendly, and sophisticated perfect for our production needs".

"PFX is a great program".

"This is the first program I have found that will allow true cel animation".

REPARTEE

Comments, complaints, and concerns

from AmigaWorld *readers.*

AND THE WINNER (FINALLY) IS. . .

EDITOR'S NOTE: We apologize to all our readers who have been following AmigaWorld's *Summer '88 Treasure Hunt over the past several issues. It must have been an unpleasant shock to read in last month's Contest Results article (Nov. '88, p. 76) that where the winner's name was to appear, the following line was printed: "That lucky person's name / and hometown."*

Because we wanted our readers to be informed of the complete contest results as quickly as possible after the September 16 drawing, we made arrangements with our printer to patch in the winner's name as a last-minute change just before the issue went to press. Through circumstances beyond our control, the printer failed to execute our wishes. We are well aware of the enormous amount of time and effort so many readers put into solving the contest, and we deeply regret this unfortunate omission.

We did indeed have a Treasure Hunt winner—Dick Newell of Billings, Montana—whom we contacted immediately following the Grand Prize drawing. For more about Dick, and a list of the consolation prize winners, see "Notepad," p. 10, in this issue.

Again, our apologies for the disappointment this omission may have caused, and our warm appreciation for the support and enthusiasm shown for the contest.

DEAR SANTA. . .

I'M WRITING TO you early, Santa, to give you time to prepare for December 25th.

In my A2000, I'd like a 68030 with a 25 Mhz coprocessor, MMU and 4 megs of 32-bit SRAM. Please, Santa, don't make me wait till the next decade for such a board to be available for less than the price of my A2000.

Oh! And Santa, another thing, let's not play IBM's planned obsolescence game. The next chip RAM plateau must be two megs. And I'd like it next week—I can't wait till Christmas.

This is the computer business Santa, and there are Mac IIs out there to contend with.

My chimney's the third one down on the left.

Rob Thomas
Forest Hills, NY

BRING BACK THE 1000

I HAVE BEEN reading about the problems that Fred Kuhlman and John Payne have had with the Fat Agnus chips in their Amiga 500s ["Fat Agnus on the Loose," Repartee, May '88, p. 10, and "Another Lemon," Repartee, Sept. '88, p. 8]. Boy do I like the Amiga 1000! I have had the A1000 for about three years, and I have not had one glitch due to the computer.

Commodore should start manufacturing the Amiga 1000 again. They should also improve (I guess I should say repair) the A500. If the bugs in the A500 can't be fixed, then the Amiga 1000 should be the obvious answer.

Marc Hoffman
Julesburg, CO

I FULLY AGREE with Rick Jones ["New Motherboard," Repartee, August '88, p. 8]. I have owned an Amiga 1000 for almost two years and I wouldn't trade it for any of the new Amiga models. I think Commodore made a big mistake by discontinuing the A1000. The gap between the 500 and the 2000 is too large.

Let them make a new A1000, a computer for the more serious hobbyist and artist. It should be specially designed for graphics, desktop publishing, animation, CAD, music, desktop video, etc. And with enough internal memory to cope with all this and the possibility for internal RAM expansion.

Luc Stynen
Berchem, Belgium

RAM-DISK SUPPORT FOR GAMES

I HAVE AN Amiga 1000 with two megs and I like to play games on my machine as well as do real work. I would like to see the companies who develop entertainment software recognize the existence of machines with more than 512K. Simply, use a RAM disk for disk-intensive games, such as Destroyer by Epyx. This could make play much more enjoyable, as well as faster. I would not mind paying a small extra fee to receive a version with RAM-disk support, or the command sequence required to alter the program myself.

E. Paul Austin
APO, NY

ONE MORE BUTTON

I ENJOY PLAYING games on my Amiga 500, but there are times when I look back to my Apple II days wistfully. Usually it's because the Amiga lacks a two-button analog joystick. One more button would add a new dimension to many games.

Isn't there anybody out there willing to make a few bucks by selling a two-button joystick? If one is made and sold for $10–$15, I'd buy a couple, and I'm sure there are thousands of others who would do likewise. Once the hardware is out there in quantity, the software will follow to take advantage of it.

Jason Chung

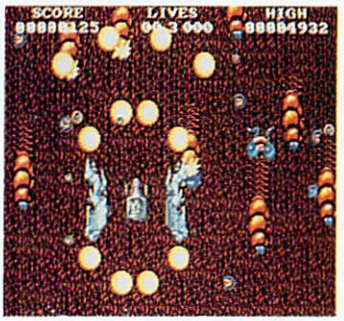
NOTEPAD

Compiled by Linda Barrett



Treasure Hunt consolation winners received Discovery's Hybris.

O Consolo Mio!

EVEN THOUGH WE failed to publish his name in time to appear last month (see "Repartee," p. 8, in this issue), and despite having to contend with such well-known headline grabbers this fall as George Bush and Mike Dukakis, Dick Newell still managed to become a household name throughout America. You probably caught the Billings, Montana resident on the Carson show or chatting with Ted Koppel, or perhaps you saw him on the cover of *Time*, and immediately recognized him as the winner of *AmigaWorld*'s Summer '88 Treasure Hunt. (Actually, in next month's column you *will* be seeing Dick and his wife Carolyn collecting their new Amiga 2000 at the Mark Hopkins Hotel in San Francisco.)

Right here, however, we wanted to turn the spotlight on some of the lesser-known Treasure Hunt winners. Because the response to the contest was so strong, we decided to draw 12 consolation winners from the remaining correct entries.

The 12 people named below will receive a copy of the new arcade shoot-'em-up *Hybris*. Discovery Software of Annapolis, Maryland, has generously donated the 12 copies, plus an additional three to the people whose names appear at the end of the list as consolation winners for their "special" contributions to the contest as described last month.

Linda Kirpes Beltsville, MD	Dorothy Paschall Independence, MO	Mike Sutherland Gulfport, MS
Paul Walker San Anselmo, CA	Marcus Miller Colorado Springs, CO	Bryant W. Scott Virginia Beach, VA
Mr. & Mrs. C. Erickson Greeley, CO	Bill Burton Hazelwood, MO	Don Boose Freeport, NY
Fuad Aziz Winter Park, FL	Robbie Vasilinda Eugene, OR	Allen Kinzey Wrentham, MA
Joe Vasquez Globe, AZ	John Andre Greenwood, IN	Adam Kortepeter Skillman, NJ

We hope you enjoy your prizes, and we thank you—and all the others who played—for participating in the Treasure Hunt. Also rest assured: We will indeed have another contest next year—most likely not a treasure hunt, but nonetheless a comparable test of imagination and resourcefulness. It may even be trickier and more complicated, so stay tuned. . .and we even promise to let you know who won next time!

—DS

Shows and Games in the UK

THE PERSONAL COMPUTER SHOW, held at London's Earl's Court, is the UK and Europe's launching pad for new hardware and software, and this fall's show was no exception.

For a change, Commodore UK representatives were smiling. The company's marketing has taken a major leap forward recently, with the Amiga 500 aiming for the top of the sales charts by Christmas. Commodore also changed its A2000 marketing strategy—selling the machine within "complete solution packages" for such areas as CAD and desktop publishing. The company promised all sorts of new peripherals, and there were encouraging reports about a working *Transputer board*.

With machine sales on the upswing, developers at the show made a large, but lighthearted, push for their new games. Rainbird (UK: 01-631-5373, US: 415/322-0900) hopes to make a big Christmas splash with *Fish* and *Corruption*. Following the success of its *Batman* game, Ocean Software (UK: 061-832-6633) promises a follow-up that is just as corny as the comics and films. Other Ocean releases are *Operation Wolf* (handled in the US by Taito, 604/984-3344), *WEC Le Mans*, *Typhoon*, and *Victory Road*.

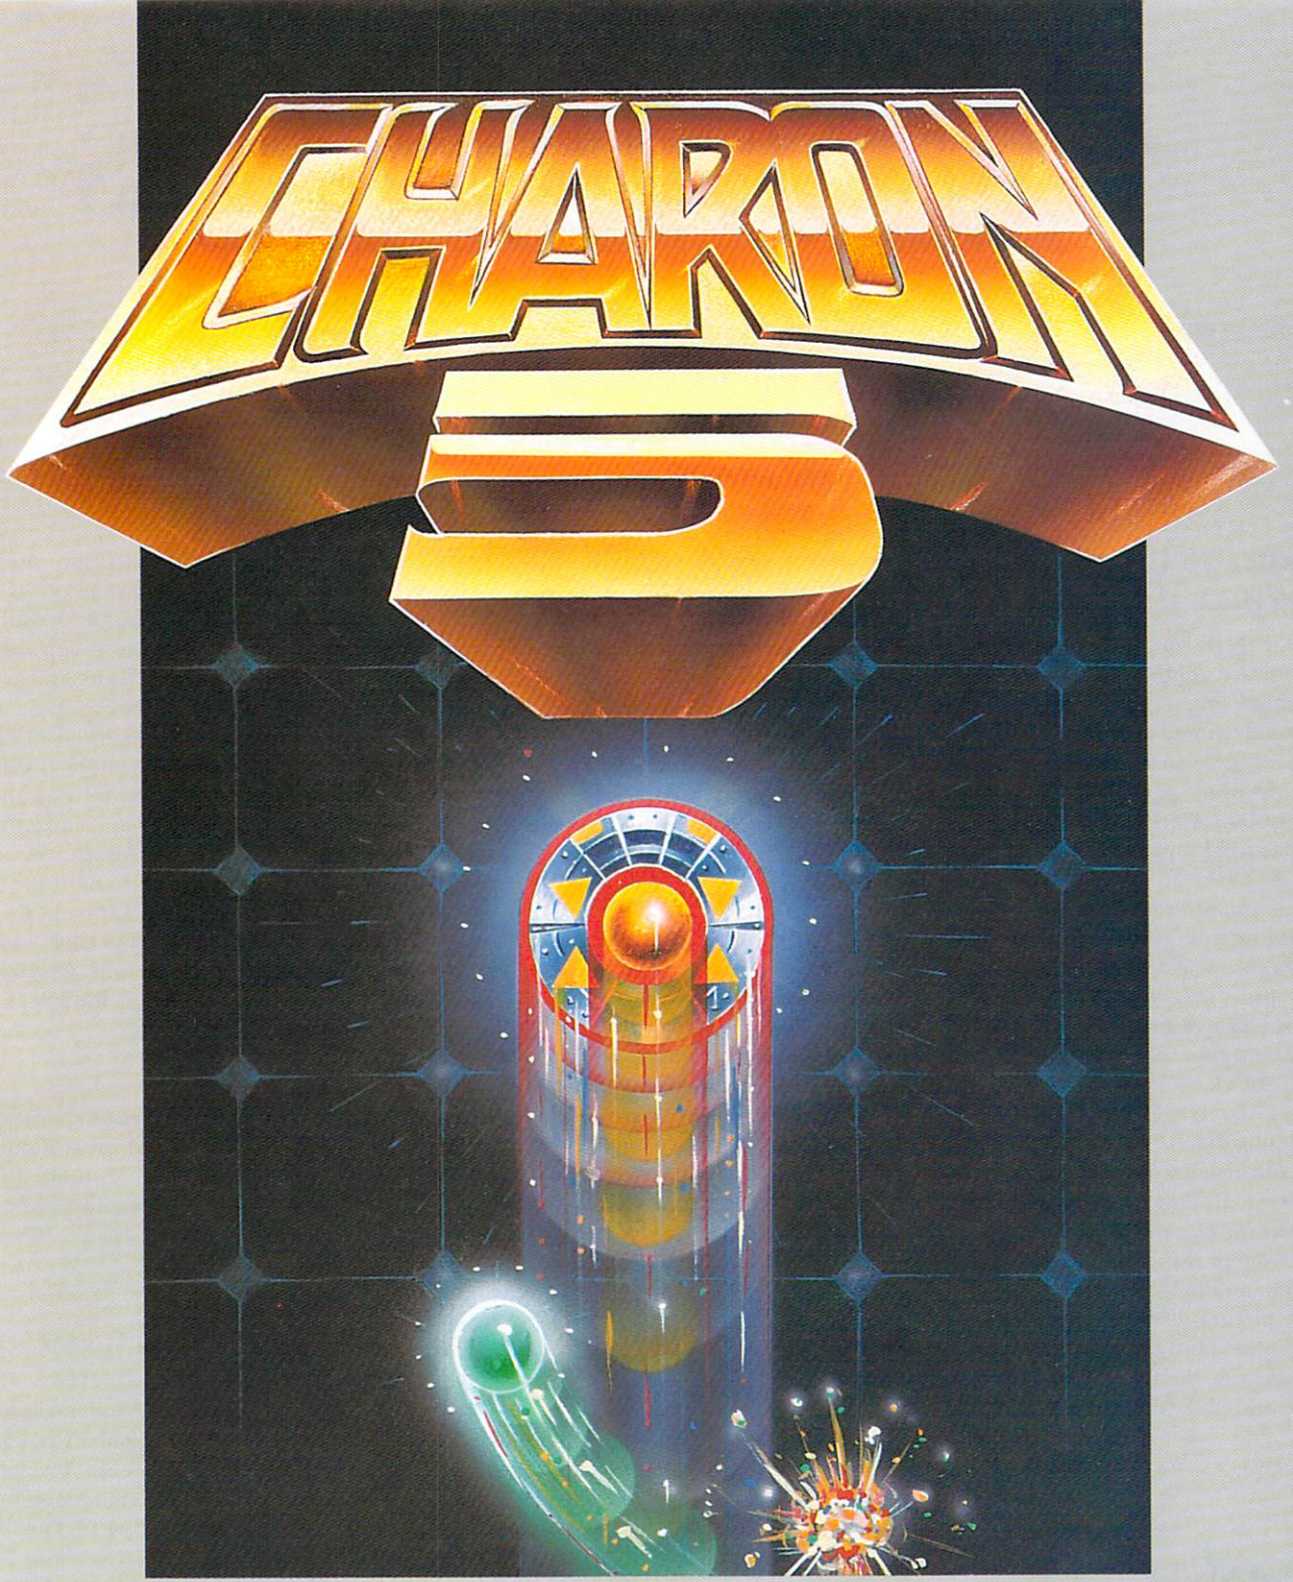
US Gold (UK: 021-356-3388), usually associated with marketing American products in the UK, is also offering arcade games programmed in the UK—*Out Run* (handled in the US by Mindscape, 312/480-7667) and *Thunderblade*.

Psygnosis (UK: 051-236-8818, US distributor: Computer Software Services, 800/422-4912) lengthened its string of games with a shoot-'em-up called Menace.

Outerspace will be crowded. After landing Starglider II, author Jez San began the Amiga version of *Afterburner* for Mediagenic (UK: 01-431-1101, US: 415/329-0800). Domark (UK: 01-947-5622) is launching the sequel to Star Wars (handled in the US by Broderbund, 415/492-3200), *The Empire Strikes Back*. *The Return of the Jedi* will follow.

Closer to home, Domark presented the *1989 Computer Maniac's Diary*. It's software full of trivia, information, and puzzles, not a pocket diary, but as far as gimmick value goes, it can't be beaten.

—Stu Menges
Middlesex, England ■



Charon 5 is an unparalleled design concept that combines strategy with Arcade action to produce a game of epic proportions. The action takes place on over 5,400 full color screens spread throughout 11 action packed levels. The game is further enhanced by the use of exceptional true stereo sound and music.

You must exhibit skill, have concentration, possess good reflexes and not be faint of heart in order to be successful on your mission against Charon 5.

HORS D'OEUVRES

Hints, tips, and techniques

from your fellow Amiga users.

OKIMATE 20 BLACK AND WHITE

MOST OF THE colors on my Okimate 20 printer are good. However, I found a way to make one of them excellent. Plain black usually comes out dark navy blue if you are using a color ribbon, or light black with white speckles if you are using a black ribbon. Here are two ways to make it as solid and pure as magazine print.

First, if you are printing an all black-and-white picture, just set your preferences graphic select to color, but use a black ribbon. This way it will make three passes of black instead of one yellow, one red, and one blue, which results in navy-blue-black.

Second, if you are printing a color picture, go ahead and print it with a color ribbon, but mark your spot on the paper. Change all the colors in the color menu (except black, that is) to white, change your preferences settings to black and white, and then go back and print over the picture a second time using a black ribbon. This will make one pass of true black over the navy-blue-black color printing and give you a nice sharp result.

2000 GENLOCK

WHEN I BOUGHT my Amiga 2000, I was upset to hear that I couldn't use my Genlock 1300 that I had been using for my A1000. After many calls around town, I was happy to find out that a cable could be made to allow me to hook up the 1300 to my 2000, but I couldn't manage to get a cable or find the parts to make one myself. After looking at the 2000 and the 1300, I realized that I wouldn't need a special cable. All I had to do was elevate my 2000 about 1 ¾ inches off the desk. I tried it with a thick book, and voila! It worked like a charm. I am now setting out to construct a stand that will support my 2000 a bit better, which will be cheaper than any cable or buying a new genlock.

ANIMATION REFERENCE

IF YOU'RE EXPERIMENTING with animation and you don't know how long to time an action in frames, then you are lost. I found a $40 book from England called *Timing for Animation* that is very helpful. Few stores carry it, but you can order it if you are serious enough. The ISBN number is 0-240-50871-8. Copyright 1981, Focal Press Ltd. Library of Congress #80-41303. This book has everything for timing actions in an animation.

Glendale, CA

BASIC SEARCH AND REPLACE

AMIGA BASIC HAS one of the best editors around, but it does lack a few features. It would be nice to have a find function, for instance, for those times when you wish to locate all occurrences of a variable. Well, it turns out that this is not impossible—you simply use a different editor that you already own.

Save your BASIC program as an ASCII file by using the ",A" option of the SAVE command. Example:

```
SAVE "Myprogram.btx",A
```

I add .btx at the end to indicate that the program is in ASCII format when I later look at a directory listing. This ASCII listing can then be loaded into the ED editor from the CLI, and all of ED's functions, including Find and Find with Replace, can be used on it. You can then load the program back into Amiga Basic and run it as normal. No special commands are needed to load the ASCII version. Just treat it as any other BASIC program. When you resave it again, you restore it to its normal (tokenized) form on the disk. Since the Amiga can multitask, you can just drop behind the Amiga Basic window and run ED from there without disturbing Amiga Basic one bit.

For those unfamiliar with ED's Find option, you simply press the ESC key, then type:

```
f /word/
```

(where "word" is the set of characters you want to locate) and press Return. Using CTRL-G after finding the first instance will find the next, and so on.

8520 CHIP REPLACEMENT

FOR THOSE EXPERIMENTERS who have blown an 8520 Peripheral Interface Adapter (PIA), the equivalent replacement is the MOS 6526 chip. I've heard rumors of certain dealers charging $70 for an 8520. That's a rip-off! The 6526 is available by mail order for about $12.50 from Kasara Microsystems, 33 Murray Hill Drive, Spring Valley, NY 10977, 914/362-3131.

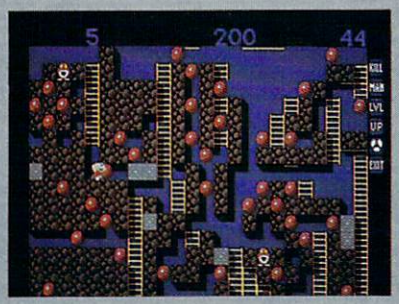
If you have an idea you'd like to share with our readers, send it to Hors d'oeuvres, AmigaWorld *Editorial, 80 Elm St., Peterborough, NH 03458. If your idea gets published, you'll receive an* AmigaWorld *surprise gift.* ■

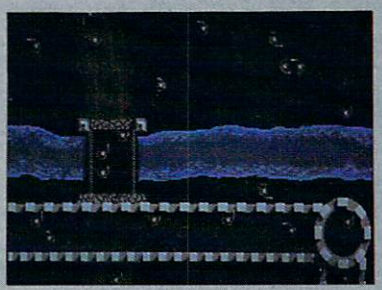


Targis
Amiga Version

Targis

Spies have stolen valuable parts from a secret laboratory and have hidden them in their cavernous hideout. Targis, our best agent, has followed the spies into their lair and must retrieve the parts. Equipped only with a "safe" blaster, he must journey through the many levels of the cave hideout and GET THOSE PARTS!

Over one hundred randomly selectable levels. A screen editor allows you to create new mazes to explore and share with your friends. An infinite number of levels are possible and allow unlimited hours of playtime. Share the danger and the honor of helping Targis save the free world.



Kingdoms of England
Amiga Version

Kingdoms of England

Enter into a land of long ago, where Kings and Knights kept the peace and honor of England. Reunite the lands of England and bring happiness to your subjects.

Kingdoms of England features a full size map of England. Battles and special occurrences have full size representations of the area and allow full control over hand to hand combat between the opposing armies.

A huge playing map, takes you through thousands of possible scenarios and screens on your quest for the Crown of England. One or Two player support!

Snake Pit
Amiga Version

Snake Pit

The evil Melator does not like snakes. In fact he thinks that snakes have no right to live. But, he is a fair man and so he has put forth a challenge to your kind; survive his dungeon and he will allow your race to survive.

But be careful, the levels are full of tricks, along the levels of his dungeon the evil Melator has placed food. Some food helps you to grow, some makes you smaller. Finding secret walls and passages may help you on your quest to rid your race of the doom looming over it.

Snake Pit features over 100 levels of play. Levels too difficult for you?? Well, make some easier ones using Snake Pit's level editor. Or if you think you're so good and this quest is too easy for you, design your own deviously complicated levels and share them with your friends. Unlimited number of levels makes for endless hours of enjoyment.

REVIEWS

DELUXE PHOTOLAB

A graphics triple threat that lets you put all your baskets in one egg.

By Roger Goode

ANOTHER ADDITION TO Electronic Arts' Deluxe Creativity Series, Deluxe PhotoLab combines paint, image-processing, and graphics-printing programs on one disk. The result is a well-integrated package that will interest artists, photographers, and those who dabble in arcane computer imagery.

The three programs, Paint, Colors, and Posters, make up a professional-graphics-applications workbench on which the Amiga artist can hammer out almost any problem to his or her satisfaction. While none of these programs offers anything completely new to the crowded Amiga graphics market (although each does have its share of neat little tricks), the intelligence of their design and the convenience of finding them "all under one roof" should appeal to both professionals and amatuer artist/photographers alike.

The first (unofficial) test I give to any new software package is the "Damn the manual. . .pop it in the computer" trial; while not very scientific, it will show you a great deal about a program. PhotoLab passed the test quite nicely. Although I was not able to master all the finer points of each program (especially Colors), I found them intuitive enough, or familiar enough from the use of other graphics programs, that I could start using them effectively without referring to the manual.

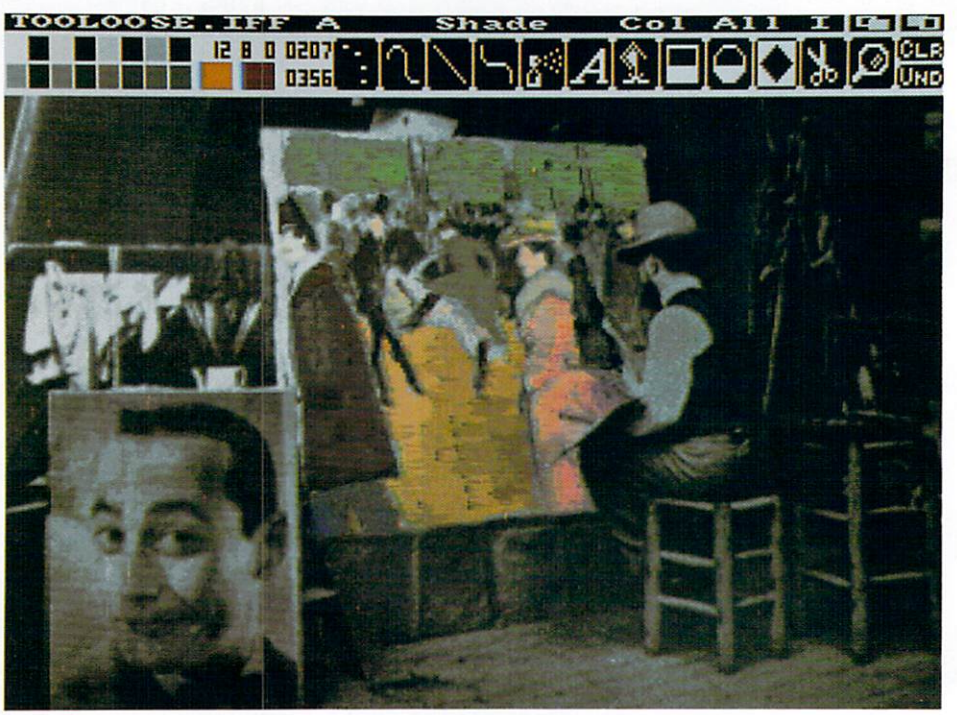
The manual itself is well written and thorough. It is laid out so that you can read as much as you need to get into the program, and use the rest as reference material. For those with less operational background, the manual is concise and easy to understand. Although I don't expect to see it made into a movie or a prime-time mini-series, it can be read cover to cover with no permanent side effects. Each program has its own section with a short guided tour through the more important features, followed by a set of tutorials and then a complete reference section that briefly details every function and menu entry.

PAINT

Like the other programs on Deluxe PhotoLab, Paint is equally at home in any of the eight screen formats available on the Amiga. PhotoLab supports low and high resolutions, Extra_HalfBrite, and Hold and Modify. Each of these modes may be interlaced or non-interlaced. As you load the program, a requester box asks you to choose a screen format. It also asks you to determine the number of bit-planes to be used (limited, of course, by which format you have already chosen) and whether you wish to use a full or three-quarter screen.

Provided you have enough memory, you can open a second screen that sits behind the first. The unusual thing about this is that the two screens may be in different display modes. You can swap the two screens back and forth and work on both at the same time.

The Paint toolbox and menu bar run across the top of the screen, and together take up only about one inch of space. While the toolbox looks rather ►



A portrait of the artist: The canvas is colorized with Paint Mode menu options.

Aussie JOKER POKER

$200,000 JACKPOT

The latest multi-player multi-format PC game from Australia is different to all forms of Poker.

Aussie JOKER POKER features 90 player capacity, open-ended discard ability, selectable deck size and hands per player, password controlled gambling system with automatic accounts – and **5 free entry forms for the $200,000 Aussie JOKER POKER Contest.**

Each month December 1988 through April 1989 winners of 240 JOKER SOFTWARE games and 4 finalists will be randomly drawn from all entries received that month.

With a guest, the **20** Finalists will be flown to Las Vegas to play **Aussie JOKER POKER** for a **first prize of $100,000 in cash** at the **Golden Nugget.**

AMIGA™

GOLDEN NUGGET

1,220 Prizes Value $200,000

1,200 Joker PC software games at $29.95 to $49.95 dependent on disk format. Game prizes at sole discretion of sponsor.	$60,000

Cash Prizes for Aussie JOKER POKER Contest Grand Final:

Highest Scorer:	$100,000
Second Highest Scorer:	$5,000
Third Highest Scorer:	$2,500
Lowest Scorer:	$1,500
16 Consolation Prizes of $1,000 each to eliminated Finalists	$16,000
Prize includes air travel for Finalists and their guests from the major airport to Las Vegas with two days and two nights accommodation at the Golden Nugget (approx. retail value $750 each subject to departure points).	$15,000

All taxes and other expenses not specified herein are sole responsibility of winners. All winners will be notified in writing.

Aussie JOKER POKER is available for SIX major PC's

If your PC has a mouse or keyboard, a mono or color monitor and a 512K minimum ram (except Apple II and C64/128 use 64K and keyboard only) you and your family can practise at home for the Las Vegas final of the **Aussie JOKER POKER contest.**

Suggested retail prices:

IBM & compatibles (CGA Board required)	**$39.95**
Amiga & Atari ST	**$49.95**
Macintosh (mono only)	**$49.95**
Apple II	**$39.95**
C64/128	**$29.95**

If ordering by telephone add $3 shipping & handling and check that your PC meets the minimum hardware requirements as no cash refunds apply. Warranty is limited to free replacement of faulty products returned by prepaid post.

Aussie JOKER POKER
A Gambling Game of Skill & Chance

Another Wonder from Down Under

Aussie JOKER POKER Contest Rules

1. No purchase necessary to enter.
2. Void where prohibited by state or federal law.
3. To enter, simply complete and return the the official entry form.
4. Limit five entries per family or household. Five free entry forms and full contest rules are included with "Aussie Joker Poker" or may be obtained by sending a stamped self-addressed envelope larger than 5½" × 7½" with a hand written request to: Aussie Joker Poker Contest Entry Forms, P.O. Box 22381, Gilroy, CA 95021-2381. Mail-in requests limited to one per name, household or family and must be received no later than 3/31/89. WA & VT residents need not include return postage. Full rules also available from participating Mindscape retailers.
5. Monthly entries must be received no later than the last day of the month in which a drawing will take place in order to participate in the month's drawing. Drawings will be held from December, 1988 through April 1989, inclusive. Final entries must be received by 4/30/89.
6. Contest open to legal residents of the U.S.A. and Canada (other than Quebec).
7. Odds of winning depend on number of eligible entries received.
8. Contest subject to complete official rules.

JP31A

sparse, its features are comparable to other paint programs. The small, space-saving on-screen palette is backed up by a full 4096-color palette on a separate screen that resides behind the active painting screen. The palette screen features the 16–32 register palette from the toolbox, plus a series of sixteen large squares that make up a permanent display of all 4096 colors and a paint set of four rows with 32 colors each. You can use the paint set to create experimental color spreads and mixtures, and then copy them to the register palette for use in lo-res, hi-res, and HalfBrite mode pictures. With HAM pictures, colors can be mixed in the paint set and then used directly in the painting. Most of the more familiar palette functions are found here: color spreads, copy color, RGB and HSV sliders for adjusting colors, and ranges that can be created for use with special gradient fills.

Most of the basic painting tools are represented in the on-screen toolbox display. For the great majority of these, and for many menu items, there are keyboard equivalents which Electronic Arts has made as logical as possible (p for Palette, u for Undo, and so on). The basic tools are: Dotted freehand, Continuous freehand, Straight line, Curve line, Airbrush, Text, Fill, Filled and Unfilled rectangle, Filled and Unfilled ellipse, Freeform shape, Brush selector, and Magnify/Zoom.

All of these tools work in any of the display modes, and many have special functions. The Curve tool, for example, uses four points to make a curve, rather than the usual three, to allow for an added degree of finesse in creating smooth curved lines. Normally you would have to patch two curves together, to create a flowing "S" for aFrench curve, but this tool lets you do it in one operation. Another nice innovation is the use of the Shift key to constrain rectangles and ellipses into squares and circles, respectively. It's not headline stuff, but good smart design. The Oval tool provides the option to either draw the oval from the center out, or to fit a rectangle defined on screen.

There are also a couple of nice touches added to the Custom-Brush menu. One is Resize Draw, which allows you to take any custom brush attached to the mouse and resize it and paint it in one operation (simply by defining a rectangle—regular or irregular—around the space you want the brush to print). This can be done with a brush of rectangular or irregular shape. Another useful item is Grab Last, which will pick up the last thing drawn to the screen. If you depress the Shift key while selecting Grab Last, you can pick up a brush from under any custom shape last drawn to the screen (for instance, you can pick up a custom brush inside an ellipse).

The paint-mode menu contains a complete array of selections for effects that can be created using the custom brushes or paint tools. These include: Solid, Mix, Low Mix, Average, Blend, Shade, Sub Pict, Scale, Add, Max, Min, Or, Xor, And, Hlf, B&W, and Sub. Some of these are self-exlpanatory, like B&W, which converts any pixel it affects to a gray-scale equivalent. Others are more esoteric and reflect some of the more exciting things going on recently in Amiga graphics. Xor, for instance, will lean colors either toward gray or to their complement on the color wheel. For further enlightenment on these effects, do as the manual says and experiment. One point of interest about Paint, and the other two programs is that each is able to handle picture files that are limited, effectively, only by the amount of memory in your computer.

Colors

The Colors segment of PhotoLab an image-processing program that will add a whole new level of control to the images you work on. It is straightforward and easy to use. The Colors command screen takes up about three-quarters of the screen, allowing you to load and view a picture over the top as you manipulate it. If you need to see more of the picture, you can pull the command screen down or push it behind the picture with one keystroke.

The top section of the command screen is the color-statistics display. In this area you can see at a glance the exact RGB (Red, Green, Blue), HSV (Hue Saturation Value), or MCY (Magenta, Cyan, Yellow) values of any color in your picture. The statistics display will also give the Pixel Population count and Percentage of any color on screen. That means you can find out exactly how many pixels in the currently-loaded picture are of a given color, and what percentage of all the pixels in your picture are using that particular color. Finding the Pixel Population might be the first step in deciding whether a color register can be cleared for other use or eliminated altogether to reduce the number of bit-planes in a picture.

Beneath the statistics display is the Register Graph, which shows the relative content of a single color component in each of the 16 color registers. For example, if you select red, then each bar (representing one of the color registers) will show how much red is being used for that color register, relative to the other registers. This value can be displayed for each of the color component's RGB and HSV.

The registers can be locked against changes, sorted out by color component or population, and then altered by degree so that the color content, say, more red or less green, can be adjusted to refine the overall tone of your picture. This powerful tool will add a new dimension to the quality of your work. The real beauty of it is how intuitive it becomes after a little practice.

Other Colors functions include Match Palette, which allows you to change the palette of one picture to that of another, while preserving the picture's original appearance so that parts of each may then be used together. A function called Separate allows you to make color separations of a picture into its red, green, blue, magenta, cyan, yellow, and black components. Make B/W will do just that—make a black-and-white image from a full-color picture. Negative will make a reverse, or negative, image of your picture.

If you're not happy with the results of any of these changes, you can select Revert to reload your last picture file without having to go through the whole loading procedure.

Probably one of the most valuable functions of Colors is its ability to change the display mode of a picture. With the Set To option you can change pictures from any display mode to any other display mode. Change low resolution to HAM, or change HAM to Extra_HalfBrite. You can also select Resize to change the size of any picture to anything you want within your memory limitations. ►

The Great Software Buyer's Guide

AMIGA PROGRAMS are like rabbits—lock a few in a room together for a year, and you will come back to find the room filled to bursting. Since last year's software buyer's guide, the program population has doubled. The Games were extremely prolific, practically tripling. The Graphics/Video family had plenty of new additions; fonts begat more fonts, and video effects were quite fruitful. A number of editor/librarian programs were created from the ribs of synthesizers, while composition programs created a number of riffs. The Music category swelled with new arrivals.

Before a program could be included in the buyer's guide, we needed a permission slip from its parent company. Our FAX and telephone lines are still vibrating from all the checking, rechecking, and re-rechecking of prices, descriptions, company names, and product names. Despite the exhaustive (exhaustion being our current state) confirmation process, you may find some discrepancies between our listings and your dealer's shelves. Prices, product names, and release dates are subject to change. Additions to and deletions from the market occur daily. We have tried to ease your frustration by listing only programs that will be available by the start of 1989. (Watch our new products column, What's New?, for future releases.) If a company had decided on a release date, but not a price, we listed NA (Not Available) in the Price column.

Spelling Checker.

Mailmerge.

Multiple Windows.

Resizable Graphics.

Fast Printing.

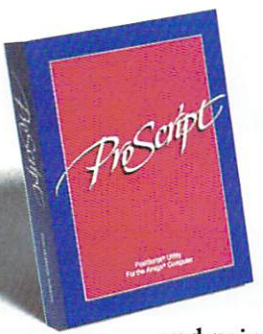
WYSIWYG.

No Other Word Processor For Amiga® Stacks Up To ProWrite™ 2.0.

Word is out. ProWrite 2.0 allows you to expand your Amiga word processing to new horizons. Use it to generate proposals with impressive bar charts. Create letters and reports with snappy graphics. Generate television storyboards. Even dash out newsletters with spot illustrations.

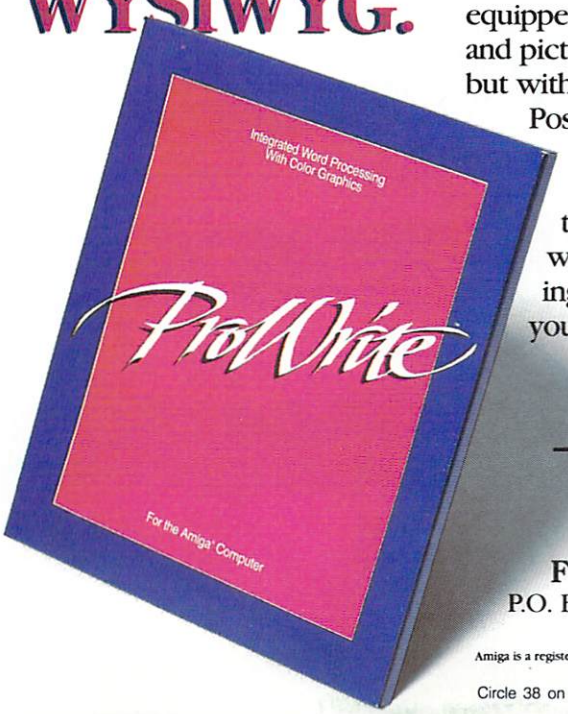
And of course, ProWrite 2.0 has all the other features you expect: a spelling checker with 95,000 word dictionary. Mailmerge. And fast graphics printing. Best of all, it works with our font packages, ProFonts I and II, giving you a broad range of professional and decorative fonts.

All this, plus ProWrite's powerful editing capabilities and ease-of-use combine to make ProWrite the best word processor for the Amiga computer.



ProScript: Perfection In Print For The Amiga.

ProScript is the new PostScript utility from New Horizons Software that gives you the professional look of typeset copy. ProScript reads ProWrite files and prints them on any PostScript equipped printer, giving you the same multiple font and picture capabilities you expect from ProWrite, but with the typeset quality of PostScript printing.



ProWrite 2.0 and ProScript. A powerful new team that puts a new world of word processing and printing at your fingertips.

SPOTLIGHT ON MUSIC

MIDI Magic

Developed By Circum Design

Remember your first tune on the kazoo? Or your recital after countless piano lessons? Could they have used some fine tuning?

Welcome to the exciting world of MIDI recording. Now you can blend all kinds of synthesized, sampled and live sounds into one magnificent composition. Beethoven, watch out!

MIDI Magic is a ***MIDI sequencer***; it helps you record, playback, edit, and organize the MIDI data generated by your playing. When you strike a key on the synthesizer, it is recorded, When you turn a dial, it is recorded. When you slide a slider, that's right — it is recorded. Want to change tempo? Add a melody? Switch keys? It's a breeze.

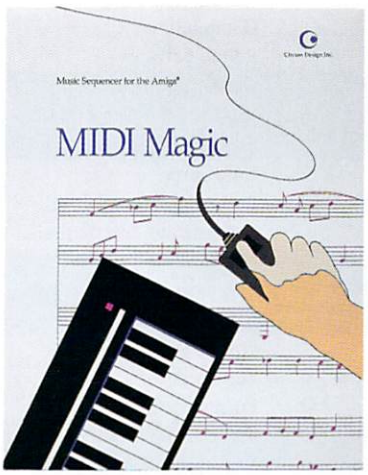
MIDI Magic provides a basic studio setup without complexity and extra expense. It excels in four areas — sound quality, features, Amiga utilization, and user interface.

Uninterrupted Music

To ensure uninterrupted music output, **MIDI Magic** gives top priority to the music. No matter what you are doing on the screen or with other multitasking applications, your music will always be rock steady.

Impressive Features

One sequencer cannot be all things to all musicians, however, **MIDI Magic**'s impressive list of features will provide a good, usable MIDI environment. Key features include multichannel simultaneous recording, 480 PPQN resolution, 4-mode quantization,



multiple time signatures, as well as realtime, modular or step modes. You can record any type of MIDI data onto 16 tracks with up to 26 sequences!

Truly Amiga

With color, windows, gadgets and pull-down menus, **MIDI Magic** looks and feels like an Amiga sequencer. You can use the mouse or keyboard for control. Screen resolution can be changed from medium to high, on the fly, if you want to show more windows on the same screen. And guess what — the HELP key actually brings up help screens for any function!

Outstanding Interface

Most importantly, **MIDI Magic**'s user interface is outstanding. It works just like a tape recorder, with Play, Record, Pause, Rewind and Fast Forward controls. If you've used a tape deck, you can start using MIDI Magic almost immediately. There are lots of extra touches, too. Like the "Don't Panic" gadget which will kill a stuck note on the MIDI device. Or the memory fuel gauge which will warn you of memory shortage. Then there's the colorful metronome which moves across the menu bar in time with the beat. Best of all, the Magic Wand mouse pointer bestows upon you creative power!

Take a close look at **MIDI Magic**. Watch it improve your creative music making. Go ahead, have some fun.

ORDER TODAY **30 Day Guarantee!**

YES! I want Midi Magic with a 30 day guarantee! I've enclosed $149.95 plus $5. for shipping & handling. (California residents add sales tax.) Send this order form with check or credit card information to Brown-Wagh. For immediate order call 800-451-0900 (in CA call 408-395-3838).

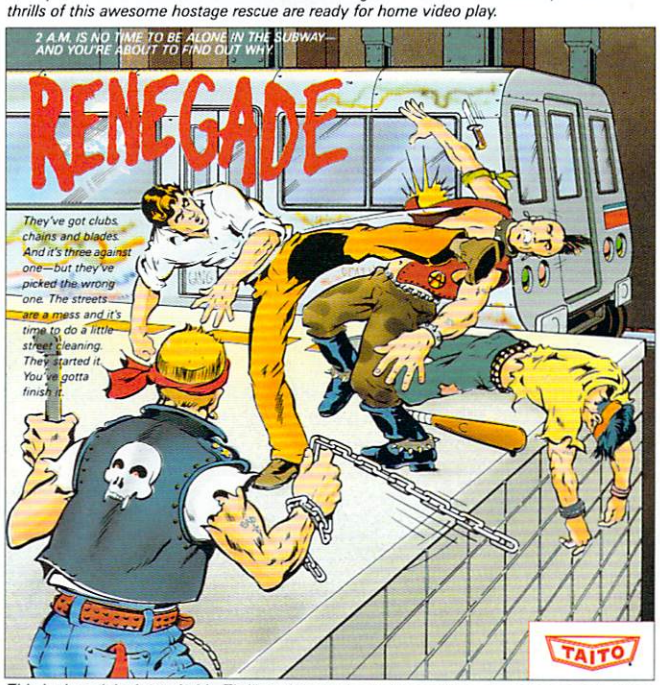
FOUR WAYS TO MAKE YOUR AMIGA SCREAM

Now you can take the world's number one arcade game home! All the action-packed arcade thrills of this awesome hostage rescue are ready for home video play.

The #1 game in Europe for over 3 months. Scramble through 100 screens of laughs as your brontosaurus buddies, Bub and Bob, drive you crazy with non-stop action.



This is the original arcade hit. Thrill to the arcade quality graphics of this fast-paced, street-style karate brawl. Find out what real action is all about!

Now you can thrill to one of the biggest-ever coin-op hits on your home computer. Rastan's mind-blowing graphics take you to a magical land of adventure and excitement.

If you want to make your Amiga explode with action you've got to give it dynamite games. These are the world famous original arcade screamers. Operation Wolf,™ Bubble Bobble,™ Renegade™ and Rastan™ will make your Amiga Computer scream with arcade quality graphics and stereo sound.

Everyone knows that arcade games are the benchmark for all other video games and Taito has been an arcade leader since 1953. Since then we've made over 1,000 classics for arcade and home play. Count on Taito to bring the heat of the arcade to your home computer.

Buy Taito products at leading stores everywhere. Visa/Mastercard holders can order direct anywhere in the U.S. by calling 1-800-663-8067.

THE ONLY GAME IN TOWN.™

WHAT MAKES A MEGA-HIT? Intensity. You've seen arcade games evolve, and you demand state-of-the-art gaming. HYBRIS is so bold, so new, so incredibly filled with arcade action, it qualifies as the vertical shoot-em up game that will power you into the 21st century. HYBRIS marks the beginning of a completely new era of mega-hits. You do more than just play HYBRIS. You immerse yourself in action!

HYBRIS
Face attacks from 24 different alien ships as you blast your way through three long playing levels, unparalleled in graphics and animation.
Strike special targets to give your cruiser added dimensions—unbelievable fire power, extra missles, an invincible mode and more . . .
Experience fighter action from the command center of 11 different ships—mechanized for mega-blasting!
HYBRIS . . .
We're assuming you're brave.
Now you must prove it.

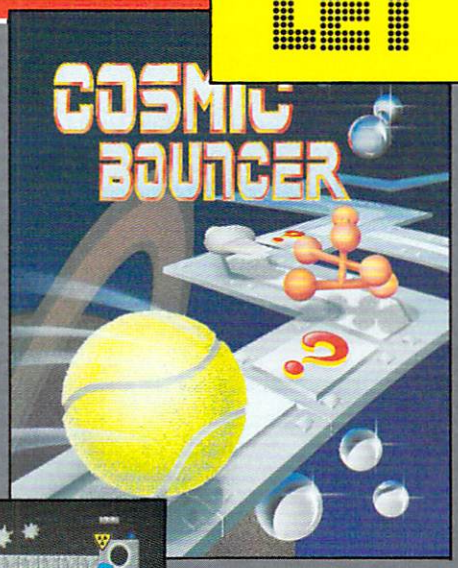
LET THE GAMES BEGIN!

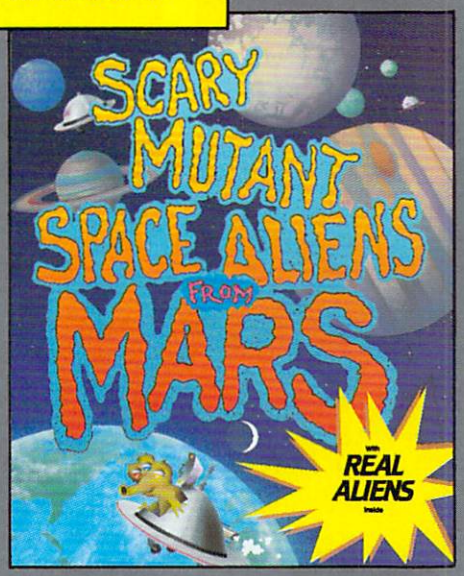


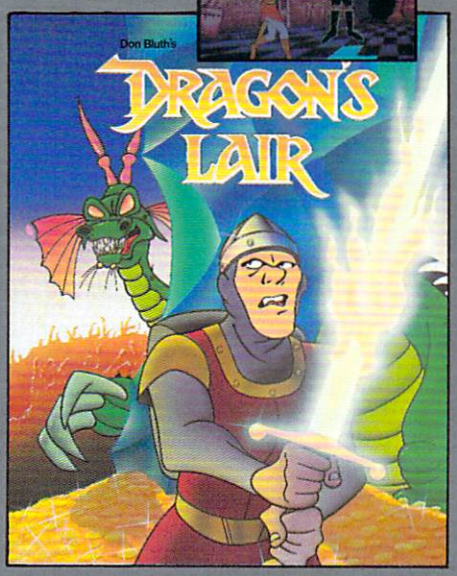
Cosmic Bouncer

A freak computer mishap momentarily fired a genetic space-beam giving you, a lonely tennis ball, new life. Bounce your way over the ever changing path, but beware: the death squares, mystery tiles, disappearing floors and super-bouncers will require everything you've got! Complete over 20 scrolling levels to earn the title of Cosmic Bouncer! An addictive game for only $29.95.

Scary Mutant Space Aliens From Mars

Pack your bags and catch the next shuttle to Venus before the Scary Mutant Space Aliens From Mars invade Earth! S.M.S.A.s From Mars is a new multi-tasking, illustrated text-adventure with a comic twist. Features include: digitized graphics and sound, superbly animated fighting sequences, instant maps, programmable function keys, quick-click controls, and humorous yet challenging puzzles. $39.95.





Don Bluth's Dragon's Lair

Dragon's Lair, the laser disk game that revolutionized the arcade industry comes to the Amiga! Featuring high quality real-time cartoon animation packed onto six disks, Dragon's Lair pushes the Amiga's graphics capabilities to the limit. You control Dirk the Daring, a knight on a quest to rescue the fair Princess Daphne from the clutches of Singe the Dragon. Your quest awaits for $59.95. (Requires one MB RAM.)

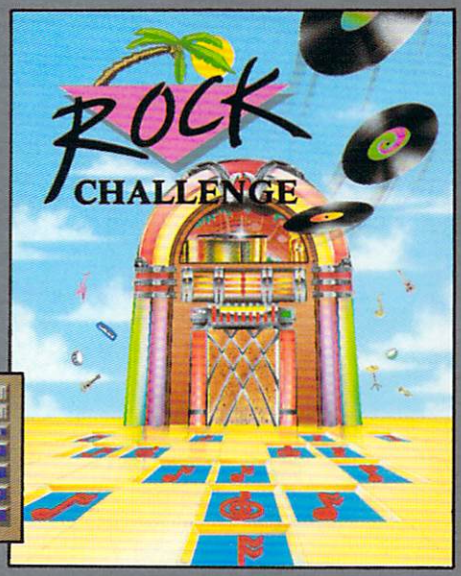
4 NEW AMIGA™ GAMES FROM

ReadySoft Inc.



Rock Challenge

So you think you know a lot about Rock music? Then let Rock Challenge put you to the test! The thousands of interesting trivia questions cover music from the 50's to present day. Match wits against family and friends in any of 5 categories, or increase your own knowledge of rock. $39.95.

Ganymed

Keep your finger on the fire button as you maneuver your ship through the enemy hordes on Ganymed in an attempt to win back your planet. $29.95.

Bomb Busters

As the leader of the crack bomb squad, Bomb Busters, you must defuse bombs through 100 levels of play on two disks and save the world from an evil group of terrorists. $29.95.

The 64 Emulator 2

Upgrading to an Amiga has never been easier with The 64 Emulator 2. Run most productivity software, transfer data to Amiga disks, use Commodore 64 printers directly from Amiga software.
Without Serial Interface $39.95
With Serial Interface. $59.95

WE'VE CAST A NEW LIGHT ON THE GAME OF CHESS.

Battle Chess™

The challenge and intensity of chess is now heightened by three dimensional combat. The chessmen are alive, reacting to your every move—Battle Chess, the exciting alternative to a board game with emotionless magnetic pieces.

With Interplay's new creation, Battle Chess, every strategic, calculated move you make is a dramatic one-"knight sallies forth and slays the foul foot soldier."

Battle Chess combines chess' logic system with color, action, excitement, and character. Complete with sound effects, this game brings life and action to the game.

To assure constant playing challenge, Battle Chess includes:

- Ten levels of difficulty
- Play against the computer or your friends, or let the computer play against itself
- Modem capability to link players in remote locations
- Over 4 megabytes of animation
- Opening library of 30,000 moves
- Over 200K of digitized sound effects

With Battle Chess, technology keeps pace with adventure.

Interplay™

If you can't find BATTLE CHESS at a local dealer you can order direct at 1-800-227-6900.

Pro Video Plus Fonts Library	JDK Images	$ 129.95	3 sets for Pro Video Plus only; PAL avail.

Aztec C's NEW Source Debugger Takes The Work Out Of Debugging!

Stop entering print statements and re-compiling over and over. Stop spending your time looking at assembly language and hex dumps. Stop agonizing over features you need but can't find . . . Start using Aztec C's NEW Source Debugger (SDB). It has all the features you expect and more!

SDB FEATURES

- Multiple task debugging
- Debug your code at the Source Level
- Set Breakpoints and Single Step by Source Line
- Access all Global and Local Variables by Name
- Evaluate and Print the Value of Any C Expression
- Displays all Structure Element Names and Values
- Assembly Language Debugger for intermixed routines
- Debug drivers
- User Control of Color-background and text
- Separate Color Windows for Source, Data and Commands
- Supports 1.2 and 1.3 Amiga resident libraries
- Supports 68010, 68020 and 68881 processors
- Re-usable command macros and procedures enables you to customize the debugging environment

And with Aztec C you get optimized C, support for scatter loaded and segmented programs, support for all floating point formats, and the clean, fast and compact code you need.

SDB Special through December 31, 1988

30 Day Satisfaction Guaranteed

Source Debugger (Reg $125.)	**ONLY $ 75.**

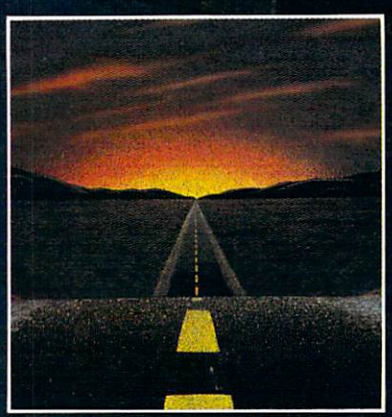
From Origin, source of the classic, award-winning Ultima™ series, comes

AUTODUEL

A futuristic, fast-paced strategy role-playing game by Lord British and Chuckles. Based on the award-winning Car Wars® board game by Steve Jackson.



Drive the freeways of the future where the right of way goes to the biggest gun. Somewhere within the 16 cities and outlaw-infested highways are the clues you will need to complete the ultimate mission.

Step into the arena on Amateur Night and earn the right to custom-build your combat vehicles.

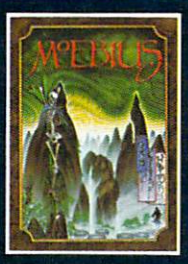
The AADA will offer you courier missions. The FBI and the underworld will vie for favors. But watch out! To survive you'll need road experience, the ability to decipher clues, gambling skills, money, a super car—even a clone.

The final gauntlet will test your tactical skills and hair trigger reactions to the limit. But with triumph comes honor, and entry into the elite circle of AutoDuellists. The challenge of AutoDuel® awaits you. Are you ready?

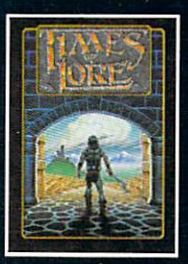
ORIGIN™ 136-B HARVEY ROAD, LONDONDERRY, NH 03053 (603) 644-3360

Ultima® V
The latest in the award-winning Ultima saga. **$59.95***

Ultima® IV
The first part of the Avatar's fantastic tale. **$59.95***



Moebius™
Exotic fantasy featuring 3-D martial arts combat. **$39.95***



Times of Lore™
A unique blend of role-playing and arcade action. **$39.95***

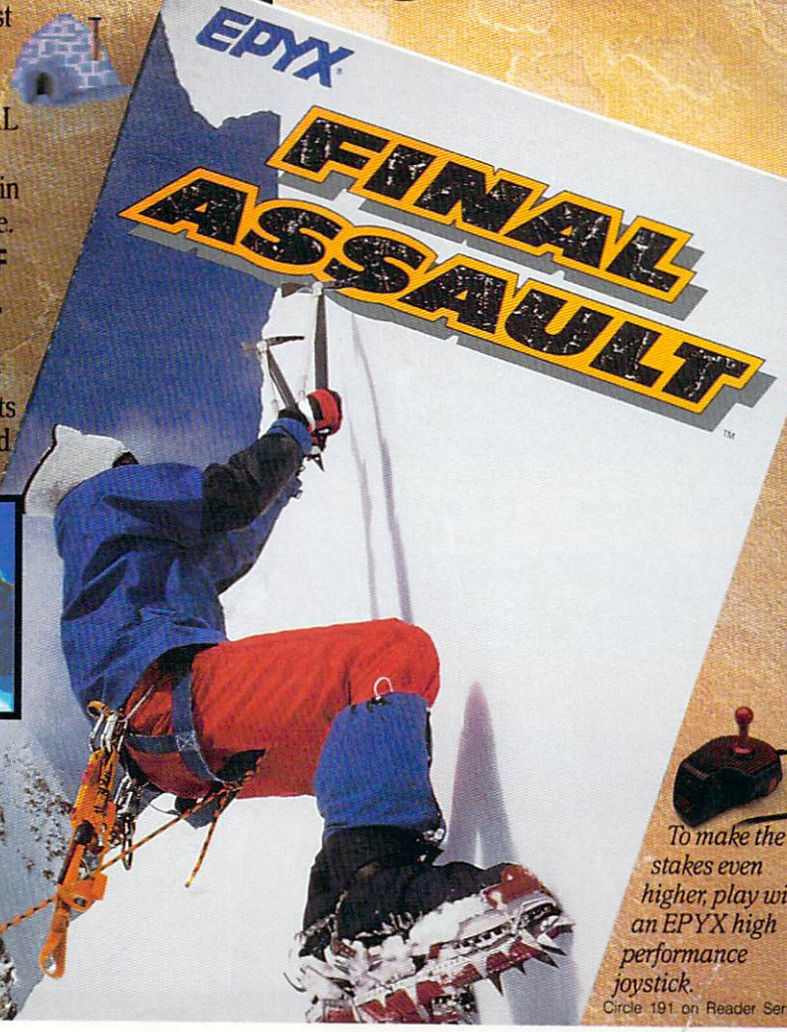
ONE MISTAKE AND IT'S THE BIG PANCAKE.

You're at the foot of one of the world's highest mountains. And you're not snapping pictures. Because this is the FINAL ASSAULT. The only mountain climbing game in the Alps or anywhere else.

IF YOU'RE AFRAID OF HEIGHTS, FORGET IT.

You'll experience the terror and elation of one of the most grueling sports ever. And you'll be tested every step of the way.



Did you pick the right course? (There are six treacherous possibilities.)

What about supplies? If you run out of soup, you'll be stuck with snow sandwiches.

Forget your spikes or ice picks? You could end up a permanent part of the scenery.

If you have nerves of steel, even when you're dangling 40 feet off a cliff, you might just be one of the lucky few to plant your flag at the peak.

SPOTLIGHT ON GRAPHICS

Express Paint 3.0

Developed By Professional Automation Resources, Inc.

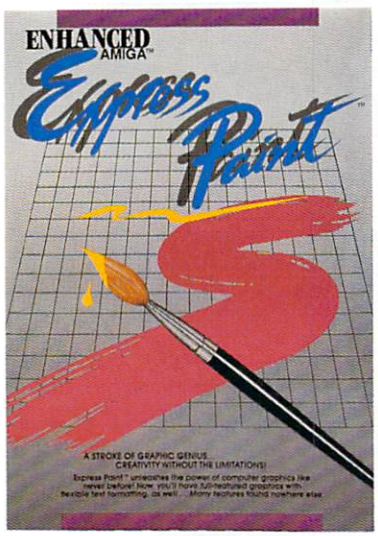
"New Contender For Heavyweight Title Of The Paint Programs."

That's what the press wrote about Express Paint's initial release. When version 2.0 shipped, it became the only paint program with PostScript and poster-size printing. Now version 3.0, with a whole new set of capabilities, deserves still another look.

Virtually Unlimited

Start with Express Paint's ***virtual page***. This lets you create a picture of any size and any number of colors, without running out of chip memory. Want to work on several pictures at the same time? Need some spare screens? Cut and paste from one picture to another? No problem.

Then look at the ***undo*** feature. While some programs let you undo your very last change, Express Paint lets you undo any number of changes. Experimentation gets a lot easier, doesn't it? Express Paint can also redo what you've undone. In other words, you can undo many steps, make a few adjustments, and then step forward again, automatically redo-ing what you've undone. It's wild!



New Special Effects

Once you stop experimenting with the virtual page or unlimited undo-ing and redo-ing, you"ll find a rich collection of special-effects tools. First there is the ***3-D perspective*** which transforms any 2-D brush into a 3-D creation. Then there are tinting and gradient fill tools. Since Express Paint lets you use many brushes in memory at the same time, you now can rotate, distort, stretch, mirror and fill them with text.

Speaking of text; no other paint program offers as much control. Express Paint lets you import text and place it anywhere — inside images or around irregular objects. Fontstyles, size, justification, margins and line spacing can all be adjusted.

This version of Express Paint has so many features, you owe it to yourself to give it a look. For a limited time, PAR Software will also include a FREE Clip Art Disk ($29.95 value) containing hundreds of color images.

ORDER TODAY *30 Day Guarantee!*

YES! I want Express Paint 3.0 with a 30 day guarantee. I've enclosed $139.95 plus $5. for shipping & handling. California residents add sales tax. Send this order form with check or credit card information to Brown-Wagh. For immediate order call 800-451-0900 (in CA call 408-395-3838).

PRO•SOUND Designer

Gold Edition™

At last, a *crystal clear* sound sampling system for the Amiga™! The advanced user interface makes capture, manipulation and playback of real sounds surprisingly easy. Complete editing and processing facilities for *clean sounding professional results!*

Pro•Sound Designer gives you a multitude of tools to record and manipulate mono and stereo samples.

- Automatic Gain Control for hassle-free digitizing.
- Plays as many as four samples at once.
- Advanced editing functions with Cut, Paste Overlay and Dynamic Buffering.
- 1 - 32 kHz Response for top-quality sampling.
- Change octaves and freqencies of any sample in memory.
- Auto-Record and Auto-Play triggers.
- Looping
- "Gender-bender" included for use on all Amiga models A-500, A-1000 and A-2000

And That's not ALL....

MIDI-Plus software (included) allows you to take samples recorded with ***Pro•Sound Designer*** *and play them back via the Amiga or a MIDI keyboard as an instrument voice. Up to* ***10 samples can be in memory at once*** *and full control is given over the part of the sample to be played and how it is to be played. For* ***fun*** *or* ***professional*** *use.*

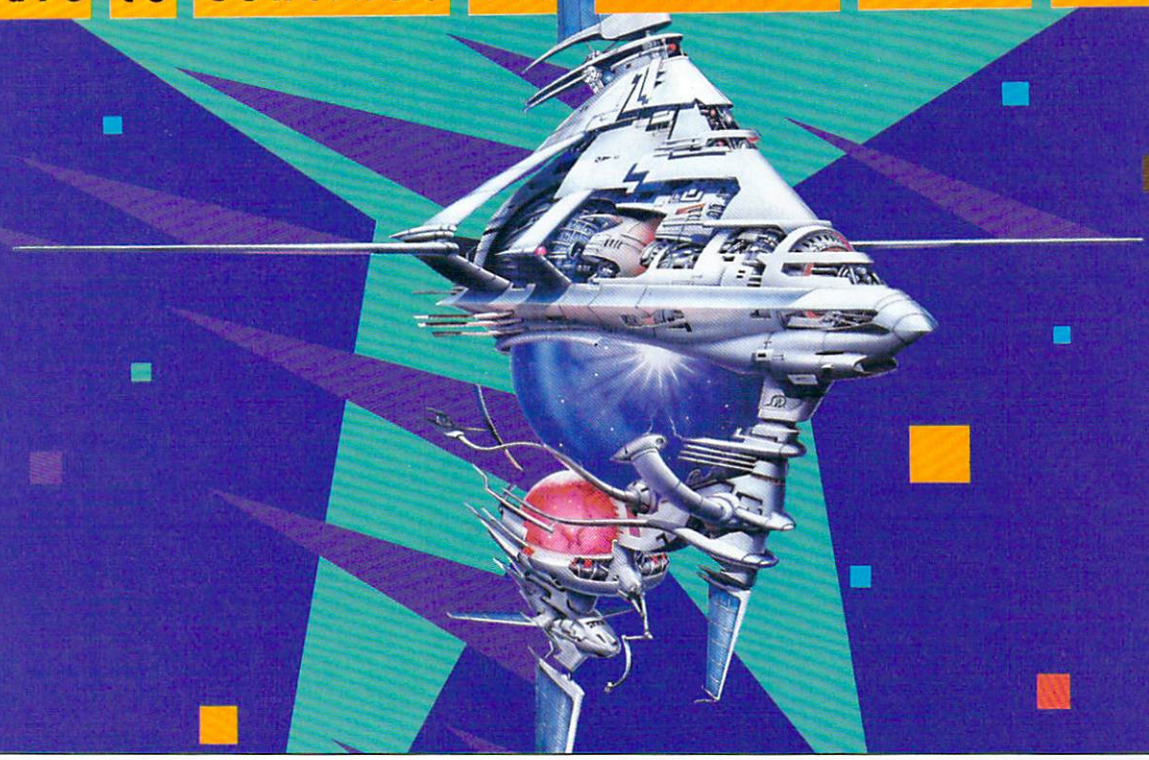
UTILITIES

PRODUCT	COMPANY	PRICE	DESCRIPTION
64 Emulator 2 with Cable, The	ReadySoft	$ 59.95	emulator with cable for C-64 peripherals
64 Emulator 2, The	ReadySoft	$ 39.95	emulates the Commodore C-64
Amiga Companion Series, The	Omega Star Software	$ 29.95	Intuition-based interactive help system
Amiga Editor	TDI Software Inc.	$ 49.95	text editor and source code
Amiga Multi-User Software	Conceptual Computing	$ 120.00	serve multiple terminals with multiple windows
Amiga PostCode	FBN Software	NA	pop-up index to over 12,000 Australian postal codes
Amiga SmartKey	FBN Software	NA	create memory-resident keyboard macros
AmigaDOS Express	Bantam Software	$ 29.95	disk-based AmigaDOS manual; covers through 1.2
AmigaTalk	Inspired Interfaces	$ 225.00	Intuition/CLI/application access with speech
ATI-Link	Lightning Publishing	$ 50.00	IFF to Targa conversion
BAD	MV Micro	$ 39.95	Blitz-A-Disk; disk optimizer
BOBshop	Revolution Software	$ 49.95	create and edit GELs
CLImate	Progressive Peripherals	$ 39.95	access AmigaDOS from Workbench
Comhair	Bernd und Torsten Keller	NA	match hair styles with your face on screen
CS-30 Interface	ACDA Corp.	NA	use the Ricoh color scanner with the Amiga
CygnusEd Professional	CygnusSoft Software	$ 99.95	word processing/programming editor
DeluxeHelp for Calligrapher	RGB Video Creations	$ 44.95	on-line interactive tutorial runs with Calligrapher
DeluxeHelp for DeluxePaint	RGB Video Creations	$ 24.95	on-line interactive tutorial runs with DeluxePaint
DeluxeHelp for DeluxePaint II	RGB Video Creations	$ 34.95	on-line tutorial runs with DeluxePaint II
DeluxeHelp for Digi-Paint	RGB Video Creations	$ 34.95	on-line interactive tutorial runs with Digi-Paint
DeluxeHelp for PageSetter	RGB Video Creations	$ 34.95	on-line interactive tutorial runs with PageSetter
DeluxeHelp for Photon Paint	RGB Video Creations	$ 34.95	on-line interactive tutorial runs with Photon Paint
Demonstrator, The	Meridian Software Inc.	$ 39.95	automate Amiga demos
Descartes!	DTM Werbug & EDV GmbH	$ 39.95	function-graphing tool; IFF-compatible output
DigiScope	ACDA Corp.	$ 79.95	digital oscilloscope emulation
Dimmer!	PAR Software	$ 19.95	dim your screen
Disk 2 Disk	Central Coast Software	$ 49.95	file transfer, C64/128 to Amiga
Disk Library	ClassicCompu	$ 49.95	disk-organization utility
Disk Mechanic	Lake Forest Logic	$ 89.95	collection of utilities
DiskMaster	Progressive Peripherals	$ 49.95	access AmigaDOS from Workbench, ARC files
DisKwik 2.0	Tigress	$ 49.95	disk editor and repair utility
Dos 2 Dos	Central Coast Software	$ 55.00	file transfer MS DOS and Atari ST to and from Amiga
Doug's Color Commander	Seven Seas Software	$ 29.95	clone Doug's interface to other programs
Encore	Elipsys	$ 69.95	record and replay mouse movement and keystrokes
EQPlot	Scientific Software	$ 35.00	equation plotter
ES-5C Programmable Sci Calculator	Emusoft Corp.	$ 19.95	similar to HP-15C
Expert System Kit	Interactive Analytic Node	$ 69.95	toolkit, interface with other OS
EZ-Backup	EZ-Soft	$ 49.95	file-backup utility manages data on backup disk
FACC II	ASDG	$ 34.95	disk performance enhancer
Flipside!	Micro-Systems Software	$ 29.95	prints spreadsheets sideways
Flow	New Horizons Software	$ 99.95	outline processor
Font-Works	Associated Computer Ser.	$ 99.95	scans IFF images to produce fonts
Fruit 2 Friend	Top Disk Software	$ 59.95	enhanced Apple II ProDOS/DOS 3.3 file maintenance
Fruit to Friend	Top Disk Software	$ 49.95	read and write to Apple IIe ProDOS and DOS 3.3 disks
Gizmoz	Digital Creations	$ 69.95	desk accessories
GOMF 3.0	Hypertek/Silicon Springs	$ 34.95	error-handler lets you see data after a crash
HexDump	Northwest Mach. Specialties	$ 19.95	hex dump utility
Holmes!	DTM Werbung & EDV GmbH	$ 44.95	disk and file-repair utility
I.C.E.	King Publishing	$ 89.95	calculator construction and function plotting
ICONizer	Royal Software	$ 29.95	create custom icons
Jet Set	C Ltd.	$ 49.95	driver and utilities for HP LaserJet Plus
KickWork	Amigo Bus. Computers	$ 39.95	one disk Kickstart/Workbench
LaserUp! Utilities 1	S. Anthony Studios	$ 39.95	IFF to PostScript
LaserUp! Plot	S. Anthony Studios	$ 49.95	Aegis Draw files to PostScript

Starglider II

Dare to Continue the Ultimate Space Fight



The time is the distant future, in a remote corner of the universe. A hostile horde of creatures from the planet Egron is back to capture your home planet, Novenia. You climb into the cockpit to destroy—once and for all—this alien race. Are you ready for the ultimate space fight? Starglider II, the eagerly awaited sequel to Starglider, streaks onto the screen with more astonishing graphics than ever imagined! With a 3D instrument panel and fast, furious, futuristic weapon system...it's the most extraordinary cross between flight simulator and shoot 'em up arcade game created!

LANDMARK TECHNOLOGY—ONE STEP FURTHER! Superfast solid 3D graphics give you an incredibly realistic feeling of flight.

SPECTACULAR SOUND EFFECTS add to the game's startling effects.

MULTIPLE CONTROLS, FAST-PACED ACTION with an amazing array of flying creatures and crafts—all aimed at you!

LONG AWAITED SEQUEL to the highly acclaimed Starglider. Now, Starglider II brings you even more technological breakthroughs.

TV SPORTS™

FOOTBALL

Strap on your helmet and get ready for a pro football simulation that looks exactly like a Sunday network broadcast. *TV SPORTS: Football* features amazing graphics and animation; real arcade action on offense and defense; individual and team statistics; and a 28 team, 16 game schedule with post season playoffs! Included at no extra charge are these TV SPORTS exclusives: Broadcasters, cheerleaders, fans in the stands and a halftime show!

"SO REAL IT...SWEATS!"

- Create a league with up to 28 human controlled franchises
- All teams have different offensive and defensive tendencies
- Play it as an arcade game or coach from the sidelines
- Play alone, against a friend, or with a friend against the computer
- Includes "pushbutton statistics" to view the top performers in the league

Screen photos represent the Amiga version only. Others may vary. Cinemaware, TV Sports and TV Sports: Football are trademarks of Cinemaware Corporation.

To order direct call 800-527-4391 (in Ca. 805-495-6515) or send your Visa/MC number and expiration date, check or money order for $49.95 (C64 is $34.95) plus $3. handling to Cinemaware Corp., P.O. Box 5083, Westlake, CA., 91359. Ca. residents add 6% sales tax. Allow 3-5 weeks for delivery.

CompuServe Now Available at Radio Shack®

Make Amigos With Other Amigas.

The largest group of Amiga® users in the world shares its problems and solutions online every day in CompuServe's Amiga Forums. And you can join them.

Whether you're an Amiga novice or a professional user in broadcasting, film special effects, animation, or music production, you'll find support from thousands of Amiga users and nearly every third-party Amiga software and hardware vendor.

Looking for a solid CAD program? Want to make the most of your Amiga's multitasking capabilities? Ask somebody who's been through it all. There's no better way to get more out of your Amiga.

To join CompuServe, see your computer dealer. To order direct or for more information, call 800 848-8199. In Ohio and Canada, call 614 457-0802. If you're already a member, type GO AMIGA at any ! prompt.

Amiga Makes It Possible . . .

SuperGen Makes it Happen!

Desktop Video.

Studio quality video production on a desktop. The Amiga makes it possible. The **SuperGen Genlock** makes it happen!

Video Professionals understand the power the Amiga Computer brings to the industry and the potential it has for enhancing their work. With its revolutionary hi-resolution graphics and processing power, the Amiga represents a sophisticated video production solution.

The SuperGen Genlock and overlay device is the link between the Amiga's video potential and your own video productions. SuperGen allows you to create and produce **professional broadcast quality video** with special effect graphics and titles created on your Amiga.

Some SuperGen™ features:

True Broadcast quality video output.
Real RS-170A. No ifs, ands or buts! Accurately locks to non-time base corrected signals such as VCR output. Very accurate RGB encoder for true Amiga graphic colors.

Two independent fade controls.
For external video through background and external video through graphics. Slider or software controllable.

Selectable Auto-Fade mode.
Amiga graphics black level fade. The black level of the Amiga graphics determine the fade level.

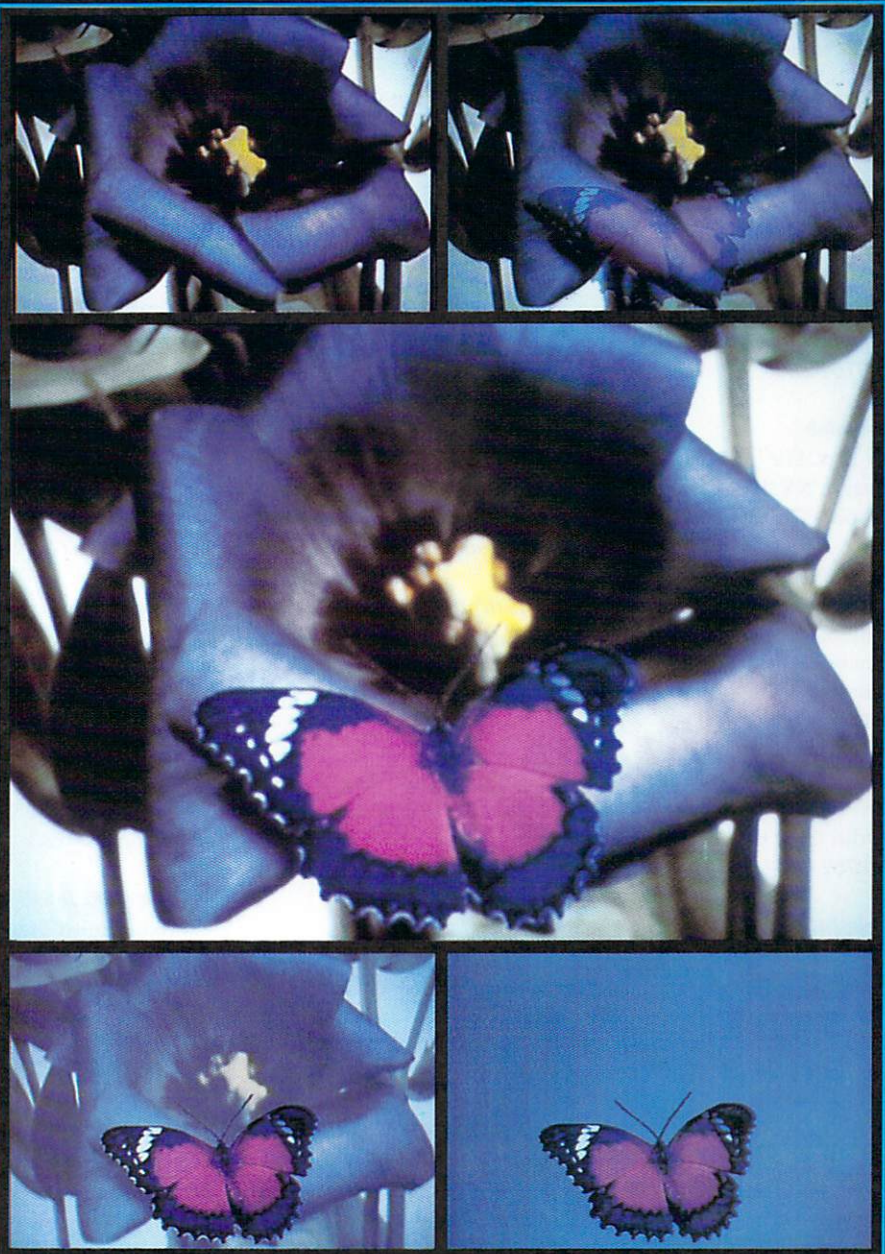
Switchable 3.58Mhz Notch filter.
helps eliminate chroma artifacts.

Selectable blanking.
Internal or external.

BNC Connectors.

A500, 1000, and 2000 compatable.

SuperGen™ $749.95
Professional Genlock
by Progressive Image Technology



Actual un-retouched photographs of composite video screens.
The flower is live video, the Butterfly is created on the Amiga.
SuperGen is overlaying the Butterfly onto the flower.
The top sequence shows Amiga graphics fading in.
The bottom sequence shows the Amiga background fading in.

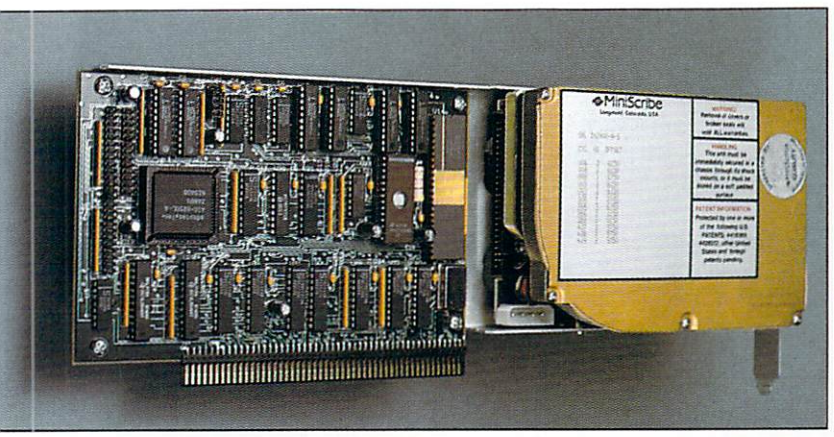
HardFrame/2000

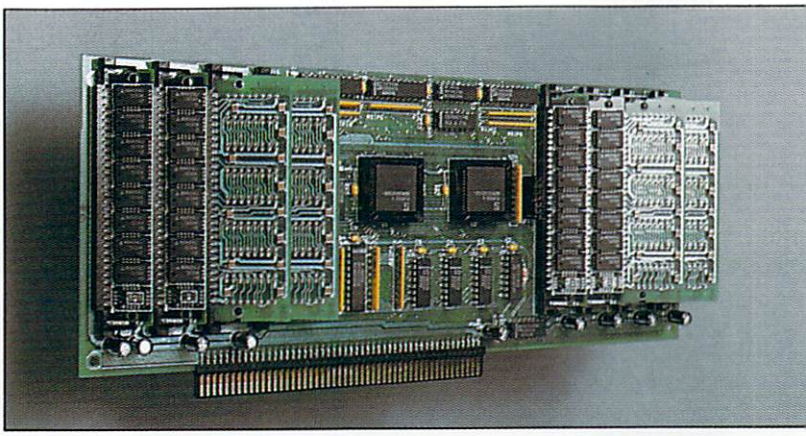
The Super-speed, DMA, SCSI Hard Disk Interface with 1.3 Autobooting



How fast is fast? **HardFrame/2000** transfers data at Amiga bus speeds! It's actually faster than the hard disk mechanism itself! And even more important in the Amiga's multitasking environment, **HardFrame/2000** has extremely efficient DMA circuitry to get on and off the bus in almost no time at all: 280ns to get on; 200ns to get off. **HardFrame/2000** autoboots under AmigaDOS™ 1.3 and is fully compatible with the new Fast File System. The core of any DMA SCSI interface is its SCSI protocol chip and DMA chip. MicroBotics has chosen the new, high performance Adaptec AIC-6250 SCSI chip, capable of up to 5 megabytes per second raw transfer speed, and the Signetics 68430 DMA chip running at 12.5 megahertz. Then we added additional FIFO buffering and enabled 16-bit wide data transfers for maximum throughput. The sophisticated design of **HardFrame/2000** provides for automatic SCSI arbitration, selection and reselection. The hardware supports either synchronous or asynchronous data transfer. **HardFrame/2000** can function as either the SCSI bus initiator or the target and can reside in a multiple master environment. Physically, **HardFrame/2000** is optimally flexible: the compact, half-size card comes attached to a full length, plated aluminum frame. The frame has mounting holes positioned to accept standard, 3.5" SCSI hard disk units such as those manufactured by MiniScribe, Seagate, Rodime, and others (hard disk mechanisms must be supplied by the user or his dealer as a separate purchase item). Alternatively, you can cable-connect to a SCSI drive mounted in your Amiga's disk bay or in an external chassis. As many as seven hard disks may be connected to a single HardFrame. There is no size limit on each disk. **HardFrame/2000** includes a 50-pin SCSI cable and header connectors for either 50-pin or 25-pin cable connection. Also included is a current tap to power frame-mounted drives directly from the slot itself. **HardFrame/2000** comes complete with driver, installation, and diagnostic software. Available September 1988. Suggested list price, $329 (hard disk not included).

The HardFrame/2000 photo shows the product with a MiniScribe 20 megabyte hard disk installed. Hard disks are not included in the purchase price of HardFrame. Note that if placed in the first slot, HardFrame uses only one slot.

8-UP! The Eight Megabyte Memory Card with Amiga™-specific DRAM Controller Logic



All the memory space you and your Amiga 2000 need –in a modern, highly integrated FastRAM expansion board. In **8-UP!**, MicroBotics went all the way to provide you with a truly Amiga-specific memory design to meet the special demands of the Amiga's high speed multitasking environment: The heart of any memory expansion is its *DRAM controller circuitry*. Rather than compromising with off-the-shelf parts, MicroBotics developed its own, custom controller design and built it into high-speed, *Programmable Macro Logic* chips (Signetics PLHS501). These new, super chips (each **8-UP!** uses two PML's) permit MicroBotics to employ *sparse refresh* technology to assure that your **8-UP!** is a truly zero wait-state/minimal-refresh-collision memory design. If you're putting eight megabytes in only one slot, that means that you probably have plans for your other A2000 slots. **8-UP!** gives you new freedom to do that planning since, unlike other ram peripherals, it is an extremely low-power memory card– a single, fully-loaded, 8-megabyte **8-UP!** draws an astoundingly efficient 800 milliamps! That's less than *two-fifths* of the power "budget" for a single slot! Low power draw also means that the card is cool-running for reliability and long life (not to mention a cooler Amiga!). **8-UP!** offers you maximum flexibility in memory configuration: it is organized into two separate *PIC's* (Amiga-speak for autoconfiguring peripherals). Each **8-UP!** PIC consists of four SIMM module sockets; these sockets accept either 256k-byte or 1 megabyte *SIMM's* (Single Inline Memory Modules). You can also purchase optional *PopSIMM* boards from MicroBotics; fill them with conventional RAM ; then use PopSIMM's to fill your **8-UP!** The card can run with as little as 512k of memory or as much as eight megs –with many intermediate configurations possible (particularly the six megabyte configuration, most desirable for use with a BridgeCard™). **8-UP!** is speedy, efficient, custom memory technology for your Amiga 2000 –and it's available now! 8-UP! suggested list price is $199 (0k installed). Optional **PopSIMM's** are $49.95 per pair.

The 8-UP! photo shows the card half populated with conventional SIMM modules and half with MicroBotics PopSIMM's. PopSIMM's (without DRAM installed) are available as separate purchase items.

ONLY DIGI PAINT CAN DO ALL THIS

Digi-Paint gives you the best Amiga graphics possible — using all 4,096 colors at once! Unleash your creativity with powerful tools and dozens of special effects, including blend, shade, tint and mirror. Digi-Paint is the perfect way to manipulate pictures digitized with NewTek's Digi-View Gold. Create images for printouts, presentation or desktop publishing with the award winning Digi-Paint.

Here's what people are saying about Digi-Paint . . .

"We were very impressed with the power of Digi-Paint. We found lots of potential for creativity and enjoyment."
AMIGA WORLD

"We've been blown away by the effects and the tools that Digi-Paint supplies. The results can be spectacular."
INFO

"Digi-Paint is the first paint program that makes it feel as if you're actually painting. Digi-Paint gives you unlimited freedom."
COMPUTE!

"We have personally seen $40,000 computer graphic terminals that couldn't come close to Digi-Paint's power."
COMPUTER SHOPPER

"Digi-Paint is remarkable."
BYTE

"Digi-Paint is a $60 wonder. Using the dizzying menu of features, the results can be startlingly realistic."
VIDEO MAGAZINE

"Digi-Paint is a new generation paint program with exciting and unique features you will simply not find anywhere else. It is extremely powerful, and at its price, it's a steal."
AMAZING COMPUTING

Digi-Paint is available now at your local Amiga dealer or call 1-800-843-8934.

ONLY $59.95

Grab A Piece Of The Action With Perfect Vision

Competition* + VCR =

Tiger captured in 10 seconds from a playing VCR.

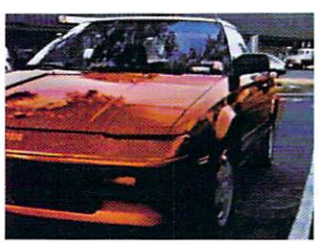
PERFECT VISION + VCR =

Tiger captured in 1/30th of a second from a playing VCR.

When you need to transfer images from a VCR to your Amiga, we have an edge over the competition.

Our on-board memory and flash converter let you capture pictures from a playing VCR while the competition, featured above, uses "slow scan" methods that just don't work with most VCRs.

If you want to digitize color pictures, Perfect Vision has the tools you need. With Perfect Vision and a camera, color pictures are captured using traditional color filters.



Also available for Perfect Vision is our Color Splitter, which allows you to capture color images from a VCR, camcorder or any other NTSC color video source without having to use color filters.

Perfect Vision creates IFF pictures that work with most Amiga video, paint and desktop publishing programs.

Perfect Vision is backed by full technical support and a one-year limited warranty on all parts and labor.

Find out why Amiga World said Perfect Vision's "forte is freezing images in motion". Visit your local Amiga dealer or call (409) 846-1311 for a free information packet.

The Perfect Vision system, including hardware and software, is priced at $249.95.

WE TOP' EM HANDS DOWN!

Top value for your dollar and true integration from a company who prides itself on excellence! You can't top that. **The Works! Platinum Edition** has 5 programs using a common interface, 1 box, 1 easy-to-use manual, and 3 non-copy protected disks. Take **The Works! Platinum Edition** home when you buy any Amiga® computer and have instant operation. Within minutes, you'll be able to write a letter, balance your checkbook, call a local bulletin board system, create a mailing list, and print any spreadsheet sideways. You owe yourself the Platinum experience!

1 **Wordprocessing Module** is the most popular Amiga® wordprocessor available • It has a 104,000+ word spelling checker with scientific and technical dictionary supplements • 470,000+ word thesaurus • prints IFF graphics • supports mail merge • allows **Bold**, Underline, and *Italics* • clip board compatible and much, much more!

2 **Spreadsheet Module** is the fastest Amiga® spreadsheet available • It contains 68881 math coprocessor support • imports and exports Lotus™ .wks files • 8 graph types in 8 vibrant colors hot linked to spreadsheet • complete macro language • allows **Bold**, Underline, and *Italics* • clipboard compatible and much, much more!

3 **Database Module** is a flat file database. It contains extensive mathematical functions • offers 4.2 billion possible records with 128 fields • compatible with dBase III™ file structures • clipboard compatible and much, much more!

4 **Telecommunications Module** is the most popular program of its kind available • It has WX, X, Y, and Z modem, Kermit, 2 way file and chat protocol and Compuserve® B protocols • 300-19,200 baud operation • 20 user programmable macro-keys • complete auto and redial capabilities • supports 8 colors (IBM/ANSI compatible) and much, much more!

5 **Sideways Print Utility** is the only Amiga® program of its kind available • rotates IFF graphics or ASCII files 90 degrees • performs automatic cut and paste for unlimited columns and much, much more!

The Works! Platinum Edition is integration . . . *Refined!*

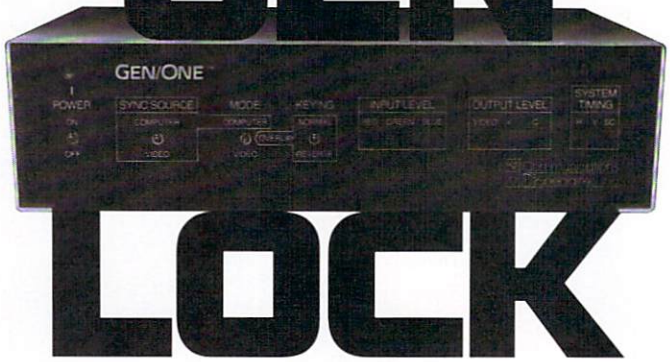
Attention AMIGA Users!

GEN LOCK



GEN/ONE™: Professional Quality Genlocking For All Amiga Computers
Specially designed for compatibility with the Amiga® line of computers, GEN/ONE is the premier genlocking encoder.
If you're serious about your video graphics, this interactive desktop accessory is a no-nonsense component. And to back our commitment to quality and customer support, we give the best warranty in the business.
GEN/ONE from CSI...Quality. With the commitment to match.sm

GEN/ONE's Advanced Features Include:
USER CONTROL
- Separate RGB and Video Gain
- H, V, Subcarrier Timing
- Computer or Video Sync Source Selection
- Separate Y/C and Video Gain
- 3 Modes of Operation

SPECIAL FEATURES
- Super-VHS Compatible Y/C Output
- Comb Filtering In Luminance Channel
- Separate Power Supply
- Convenient RGB Computer Output

$895.00
with 1 year warranty

zo·ë·trope (zō´ə trōp)

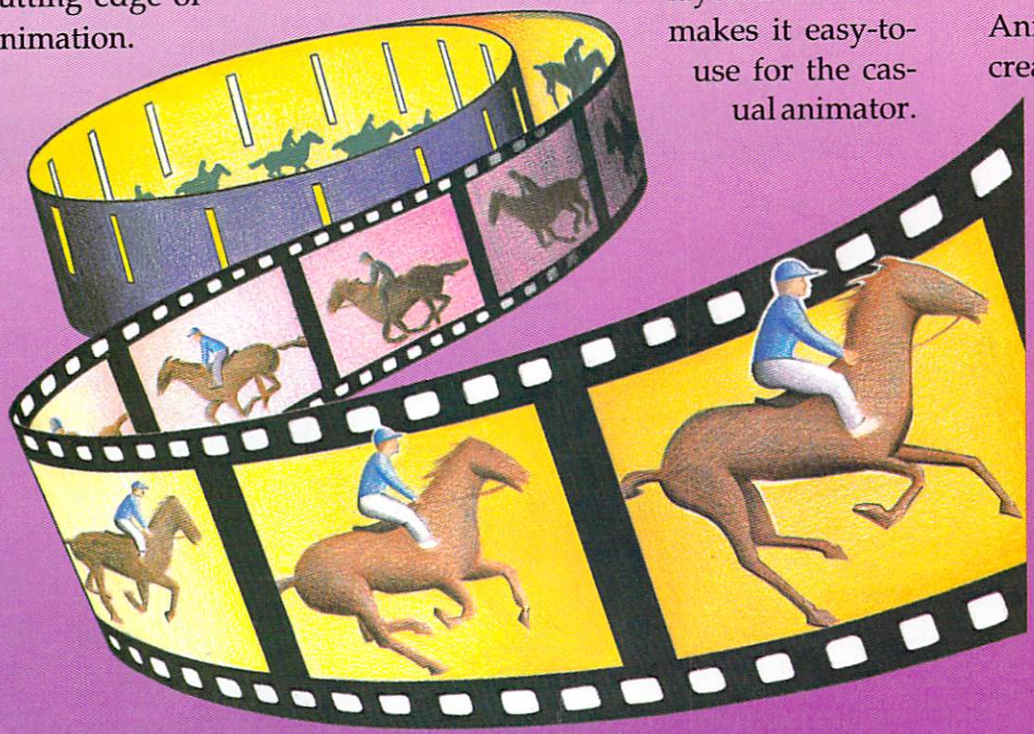
n. [irreg. f. Gr. *zoe-*, life + *tropos*, turning] 1. a device that gave static images an illusion of motion. Known as the "wheel of life", the zoetrope brought the magic of animation to the parlours of the mid-1800's. **2. a new state-of-the-art advanced animation system for the Amiga® computer from Antic Software.**

Now! The program you've been hearing so much about... Zoetrope puts you right on the cutting edge of animation.

Its high end features satisfy even the most demanding of professional users. Its unique layered structure makes it easy-to-use for the casual animator.

Bring your imagination to life with Zoetrope: the faster way to animate.

Now with Zoetrope, The Animation System™, *you* can create magical motion.



Here are just a few of Zoetrope's exciting, advanced features:

- Spin and swoop titles and images through 3D space.
- Apply computer power to classic "cel" animation.
- Overlay and underlay (compositing) your favorite pictures or animations.

Taking animation into the 21st Century

By Jim Kent, the creator of Aegis Animator*

ZOETROPE

THE ANIMATION SYSTEM™

Another great Cyber Graphics product.

LEARNING FROM A "PRO"

With Superbase Professional's powerful DML, you can still retain your amateur status in BASIC while learning to run, jump, and throw like a pro when it comes to sophisticated database programming.

Here's a simple tutorial to help get you over the first hurdle.

By Bill Catchings and Mark L. Van Name

To make use of Precision Incorporated's sophisticated data-management system, Superbase Professional, you need not do any programming at all. Many of its powerful features and numerous options are available to you straight off the shelf. Superbase does, however, contain its own BASIC-derived programming language, DML (Data Management Language). With some rudimentary knowledge of BASIC, you can use the DML to tailor customized database applications to your own special business or personal needs.

To introduce you to Superbase programming, we have devised a simple "telephone contact" application through which we can take you on a quick guided tour of Superbase's DML. We assume that you are familiar with the Amiga, a little bit of BASIC, and the basics of using Superbase Professional forms and reports. If you have never used Superbase, run through its tutorial lessons on forms and reports—they won't take long, and you need only the fundamentals to run our application. We won't show you anywhere near the full power of the DML, but we will cover all the bases in each major area. (For a feature-length review of Superbase Professional, see "Big League Pro," p. 56, in the June '88 issue of *AmigaWorld*.)

Our application is a very simple contact system that allows you to maintain information about telephone conversations. You can keep a little information (first and last name, one address line, and one telephone number) about each person, as well as some brief notation (date, time, and a comment) about each phone conversation. We provide only the skeleton of a full contact application, but you can use that skeleton as a base for your own, improved version.

Into the Starting Blocks

To test this application, select Edit from Superbase's Program menu and type in the listing that accompanies this article (see Listing 1). When you are done, choose Save from the Program menu and save it in a file with a name such as "Contacts." Do not add the Superbase program extension (.sbp); that will be done automatically. Then choose Run from the Program menu.

The application has two menus: Contacts and Calls. The Contacts menu lets you enter information about a person, edit that information, list all of the information about all of the contacts, and exit. The Calls menu lets you enter information about a new call with a person (who need not al- ►

ILLUSTRATED BY MYRON GROSSMAN

ready be in the database), list all of the calls for a person, and list all of the calls in the database. To get the feel of the application, enter several names and calls, and try each of the menu choices.

Superbase, like most interactive application builders, is designed around a few basic application-building tools: database definition, menus, data-entry and update forms, reports, and miscellaneous functions, such as calculations and batch file updates. You can use all of these tools from the DML.

Superbase also contains a powerful form builder, but for the sake of simplicity and space we use only Superbase's default forms.

The core of any application should be the database design. Our contact application lends itself well to two separate files, which Superbase calls databases. In one (Names) we keep information about people, while in the other (Calls) we record the phone calls. We connect the information in these two files relationally, with a matching field in each. We use Superbase's serial number function, SER, to store with each Names record its serial, or record, number. When we enter a call to a person, we store that person's serial number in the Calls record.

Before we walk through the code, we will need to examine a few DML basics. DML is a derivative of BASIC, to which the developers have added many database- and application-definition functions. Because we are assuming some knowledge of BASIC on the reader's part, we will avoid the parts of the DML that come straight from BASIC and concentrate on the new functions.

Yet, even the most experienced BASIC user should be careful: DML is not completely compatible with BASIC. As old-time BASIC programmers, we initially felt right at home, but we stumbled quickly. For example, PRINT does not print to the screen—it sends output to the printer. To display information on the screen, you instead use

DISPLAY <string>

You can also send your output to Superbase's "current output device" by using

? <string>

Any PRINT command makes all subsequent ? functions send their output to the printer, while a DISPLAY command sends their results to the screen. The ? function is a handy way to display reports, because it allows you to see them on the screen during development and to later switch them easily to the printer. You should use DISPLAY with messages so that they will always appear on the screen.

Building on a Solid Foundation

Let's dig into the code. We use many small subroutines, so the easiest way to understand the code is to walk through its highest level and then spiral down into the details.

We begin by displaying a start message. We also use the SET function to force our forms into Superbase's RECORD VIEW format, which is both the default and the easiest to use to edit records. Because it is the default format, this step at first may seem unnecessary. If you run other Superbase forms before you start this application, however, the default would be whatever format you last used. For instance, if you last used a form in its FORM view, our forms would also appear in that format if you did not first use the SET function.

We then open our two files with the OPEN FILE command. Before doing so, however, we use ON ERROR to set an error-handling routine—*nonames* and *nocalls*, respectively. *nonames* tells you that the Names file does not exist and asks if you want to create it. If you do, it calls the *initnames* subroutine to create that file. If you do not want to create the file, *nonames* stops the application. *nocalls* functions similarly for the Calls file, but it uses *initcalls* to create that file.

Before we get into the file-creation subroutines, we should mention a few other important points about programming with Superbase. First, we could not find a list of error numbers anywhere. You can get this list, however, by using the short sample program on page 5-50 of the Forms Editor and Programming Language manual. We recommend that you run that program and save the list.

Second, both of the above subroutines use an important DML function: REQUEST. This function displays an AmigaDOS requester. Its parameters ►

Listing 1. Telephone contact application.

```
REM Begin by telling the user that we are starting our application.
REM Also, set the view format to record.  While it is the default,
REM this statement forces us to use record view format, even if the
REM user left it in another format when he used Superbase previously.

DISPLAY NEWLINE "Starting Contacts application."
SET RECORD

REM Open the contact names file, which Superbase calls a database.
REM IF that file does NOT exist, we get an error and go to nonames.
REM That subroutine prompts the user and creates a new database file.
REM The second ON ERROR statement clears the error handler.

ON ERROR GOTO nonames
OPEN FILE "Names"
ON ERROR

REM Duplicate the same procedure for the file of calls
REM (the CALL database).

ON ERROR GOTO nocalls
OPEN FILE "Calls"
ON ERROR

REM Create a menu for the names portion of the application.
REM Call it the "Contacts" menu.
```

Take a Close Look at the Master-3A

The first thing you notice about the Master 3A is its incredibly small size. But look closer and you'll discover that it's loaded with these great features:

- Fully compatible with the Amiga®
- Full 1 Year Warranty
- Pass through connector lets you easily add additional drives
- Extra long shielded input cable (28″) allows easy placement on either side of the computer
- Extremely quiet operation
- Double sided/double density 880 KB formatted capacity
- Durable metal case eliminates radio frequency interference and drive noise
- Spring loaded door keeps out dust
- Consumes less power
- Smaller, slimmer design (4″w × 1¼″h × 9″d)
- Costs less to buy

For an even closer look at the Amiga compatible Master 3A, phone your nearest dealer:

are two lines of dialog and a type, and three options: a return code, a string variable that can contain a response, and the length of the string box. In these two routines we use *ans%* as the return code variable. It is 1 if you click on OK, 0 if you click CANCEL.

The type field lets you choose from Superbase's 19 different types of requesters. Only the first five of these really matter for most applications. Type 1, which we use in these two routines, offers OK or CANCEL, while type 0 offers only OK. Types 2 and 3 are like 0 and 1, respectively, except that they time out after two seconds. Type 4, which we use in the *getname* subroutine, lets you input a string before you click OK or CANCEL (in *getname* that response goes into the variable *name$*).

Finally, both of these routines stop the program by calling the same termination routine, *exit*, which displays a termination message, closes all of the open files, and then clears the screen so that you can start on your next task with a clean screen.

Back to the file-creation routines. Both *initnames* and *initcalls* follow the standard steps for creating a Superbase database file. *initnames* first displays a file-creation message, and then CREATEs an empty file called Names. We define each of that file's fields with the ADD command. When we are done with the field definition, we use MAKE to save our work, and then we return.

The ADD command offers many options. Its first major part is the actual field definition, a quoted string with several components separated by semicolons. The first component is the field's name. The second is a list of attributes, the most important of which is its data type. Most of the fields in this application are simple text fields (TXT), although some are date (DAT), time (TIM), and number (NUM). You can add other attributes as well, including whether a field is required (REQ), the basis of an index (IDX), a constant (CON), and read-only required (RDQ). (Superbase offers several other attributes as well.)

You then give further information about the field's format. For strings this is simply the length. For numeric fields, such as our *Link* fields, you can give a mask, or pattern. We use 9999 for our *Link* fields, which makes them integers of up to four digits. You can also give a layout pattern for date and time fields, as we did for *CallDate* and *CallTime*. The final attributes in this section are the row and column at which the field will appear when you use Superbase's Form view on those records.

The second major ADD parameter is an optional formula string. The formula string lets you control the value of a field. We use it for the *Link*, *CallDate*, and *CallTime* fields. We use the TODAY and NOW functions to fill in automatically the *CallDate* and *CallTime* fields with the current date and time. We also make them both read-only and constants. This combination of attributes lets us fill them in auto- ►

```
 REM Make it the first menu and give it a choice to exit the
 REM whole application, as well as choices to work on records
 REM in the file of names.  Note the space padding after the
 REM shorter choices to make the menu look neat.

 MENU 1,0,1,"Contacts"
 MENU 1,1,1,"List existing names"
 MENU 1,2,1,"Enter a new name    "
 MENU 1,3,1,"Edit a name         "
 MENU 1,4,1,"Exit application    "

 REM Create a second "Calls" menu for managing calls.

 MENU 2,0,1,"Calls"
 MENU 2,1,1,"List a contact's calls"
 MENU 2,2,1,"List all calls         "
 MENU 2,3,1,"Enter a new call       "

 REM Before we start to wait for the user to enter a menu
 REM choice, we clear the startup message (and, if they
 REM happen, the file creation messages), from the screen.

 CLS

 REM This is the main loop where we wait for the user
 REM to ask us to do something.  We activate our menus
 REM and then loop until we see that the user selected
 REM one of the menus.
 REM We call the appropriate subroutine to handle the
 REM menu that the user selected.

mainloop:
 MENU ON menunum%,itemnum%
 ON menunum% GOSUB contmenu,callmenu
 GOTO mainloop

 REM The contmenu subroutine handles the choice on the Contacts menu
 REM that the user selected.
 REM The order in which the routines appear in the GOSUB statement
 REM must match the numbers of their corresponding choices in the
 REM in the original MENU command.

contmenu:
 ON itemnum% GOSUB listnames,entname,editname,exit
 RETURN

 REM The callmenu subroutine similarly handles the call menu.

callmenu:
 ON itemnum% GOSUB listcall,listallcalls,entcall
 RETURN

 REM The initnames subroutine creates the names database.

initnames:
 DISPLAY "Creating the contact names database"
 CREATE "Names"
 ADD "Firstname;TXT REQ;20;1,10"
 ADD "Lastname;TXT REQ IXD;20;2,10"
 ADD "Address;TXT;80;3,10"
 ADD "Phone;TXT;15;4,10"
 ADD "Link;NUM CON RDQ;9999.;5,10","SER(~Names~)"
 MAKE "Names"
 RETURN

 REM The initcalls subroutine creates the calls database.

initcalls:
 DISPLAY "Creating the contact calls database"
 CREATE "Calls"
 ADD "Link;NUM REQ IXD;9999.;1,10"
```

flickerFixer and **Microway** are trademarks of Microway, Inc.
Amiga is a registered trademark of Commodore.
Multisync is a registered trademark of NEC.

flickerFixer eliminates your Amiga 2000's interlace flicker and visible scan lines. The result: **superior quality color or monochrome graphics and text** — for a full range of demanding applications, including CAD, desktop publishing, graphics, animation, and video.

flickerFixer fits into the Amiga video slot, is fully compatible with all user software, and does not modify the standard Amiga video signals. The board also upgrades the Amiga 2000 with a flicker free 4096 color palette, has an overscan mode that features a screen size of 704 x 470 pixels and drives most of the popular PC Multiscan and VGA monitors, including the NEC Multisync and Mitsubishi XC1429C.

Reviews are impressive: ***Amiga GURU 6/88:*** *"The display is fantastic . . . It is the best display we have ever seen on any computer system."* ***AMIGAWORLD 5/88:*** *"Our writers loved it . . . Compare the difference between night and day!"*

flickerFixer™

Advanced Graphics Adapter For The AMIGA® 2000

flickerFixer is priced at $595. It is made in the USA by Microway, Inc. For more information or to order, call Microway Sales at (508) 746-7341 or your Amiga Dealer.

State of the Art

This standard work (400 pages) to Deluxe Paint II is here presented in its newly revised second edition. PROFESSIONAL RESULTS WITH DELUXE PAINT II joins together basic illustration techniques with the power and capabilities of the most widely acknowledged graphics programme for the Amiga. Crammed full of tips and tricks, even the beginner is shown how to produce the most beautiful pictures!
Perfect colour-cycling, drawing of cartoon characters, transfer of illustrations and photographs to the computer, water colour techniques – all this and much more is lucidly covered within the pages of PROFESSIONAL RESULTS WITH DELUXE PAINT II.
The creation of background pictures for slideshows, and their transfer to video is also demonstrated. Written by a professional, himself fully committed to the wonderful world of computer graphics, PROFESSIONAL RESULTS WITH DELUXE PAINT II opens up to the budding cartoonist the giant spectrum of the Hollywood dream factory!!
More than 200 illustrations accompany the well-written and easy-to-follow text.
From the Contents: ■ Basic Illustration Techniques ■ Portraits and Real Life Drawing ■ Formation of Characters in Two and Three Dimensions ■ Colour Cycling ■ Stenciling – The Technique of Perspective ■ Production of Slides for Advertising ■ Screen Photography and Video Transfer ■ Strip-Comic Painting Workshop ■ Video Backgrounds and the Design of Landscape ■ Hollywood-style Cartoons.
Also available 2 accompanying diskettes to the book.

Distributed Exclusively in North America by SOUTHERN TECHNOLOGIES Dallas, Texas

matically when we create a new record and then stops anyone from changing them later.

The *Link* field in the Names database is also a read-only constant. We use the SER function on the Names file to get the record number of this record. This is a unique number that we use to link the files. We have to use tildes (~) instead of quotes around the file name because we are already inside quotes.

Choosing the Records to Pursue

Once we have defined the files, we use MENU to define our two menus. These are standard Amiga pull-down menus. We list their choices in order, with choice 0 being the menu's title. We pad the length of each choice string in the menu to the length of the longest one, so that the menu will appear uniform and attractive.

Then we sit in a main loop and wait for the user to make a choice. When this occurs, MENU ON gets the numbers of the menu and menu choice selected and then turns off the menus. Note that DML menu access differs from the syntax used in Amiga Basic. You need to be careful about this loop, because it is a busy wait that repeats endlessly, not a good idea in a multitasking environment. We use the ON GOSUB statement to call the first subroutine (*contmenu*) if menu 1 is chosen, or the second subroutine (*callmenu*) if menu 2 is selected. If you choose nothing (a menu value of 0 from MENU ON), ON GOSUB does nothing and we iterate.

contmenu and *callmenu* both use ON GOSUB on the number of the user's choice to call the subroutine to handle that choice.

The *entname* subroutine demonstrates how simple it is to set up a Superbase data entry. Because we opened two files when we started, we first have to make one (here, Names) the current file with the FILE command. Then we create an empty, or BLANK, record and use the ENTER command to get Superbase's default form to prompt you to fill in the fields. When you exit that form, we save the record (STORE) and return.

In *editname* we change this procedure slightly to let you edit a record. Instead of a blank record, we need to bring up the one that you want to edit. We use the *getname* subroutine to ask you which contact person you want. We make that record the current record and then follow the same ENTER/STORE process.

entcall uses still another wrinkle on this basic approach. It also asks you for the name of your contact. That person's Names record becomes the current Names record. Then we use FILE to switch the current file to Calls, and create a blank Calls record. We fill in its *Link* field with the value of the *Link* field from the Names record we just got, thereby linking this new call to the correct person.

getname is the longest subroutine, and one that ►

```
 ADD "CallDate;DAT CON RDQ;mm/dd/yy;2,10","TODAY"
 ADD "CallTime;TIM CON RDQ;hh:mm;3,10","NOW"
 ADD "Note;TXT;255;4,10"
 MAKE "Calls"
 RETURN

 REM The entname subroutine lets the user enter new contact names.
 REM We first make the names file our current file.
 REM Then we bring up an empty names record and let the user fill
 REM it in with SuperBase's built-in forms handler.  It will prompt
 REM the user for the individual fields.
 REM When the user exits the form, we save the record and return.
entname:
 FILE "Names"
 BLANK
 ENTER
 STORE
 RETURN

 REM The editname subroutine asks the user for the name of someone
 REM whose names record he wants to enter.
 REM If he gives a non-existent name, we just return.
 REM Otherwise, we use ENTER to make it the current record and let
 REM the user edit it.
 REM When he is done, we save the record and return.

editname:
 GOSUB getname
 IF retcode% = 0 THEN RETURN
 ENTER
 STORE
 RETURN

 REM The entcall subroutine lets the user enter new calls.
 REM We first prompt the user for the name of the contact.
 REM If no such person is in our database, we return.
 REM Otherwise, we make the calls file the current file, and
 REM then bring up an empty calls record.  Before we let the
 REM user edit that blank record, however, we fill in the correct
 REM link information and use SuperBase's form handler to get the
 REM rest of the information.
 REM Note that the definition of the Calls file causes Superbase
 REM to fill in the CallDate and CallTime fields automatically for
 REM the user.
 REM When the user is done, we save the new record and return.

entcall:
 GOSUB getname
 IF retcode% = 0 THEN RETURN
 FILE "Calls"
 BLANK
 Link.Calls = Link.Names
 ENTER
 STORE
 RETURN

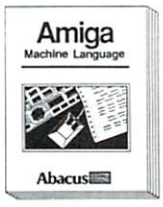
 REM The getname subroutine is a key one that we use throughout
 REM the application.
 REM We ask the user for a name with a Superbase requester that
 REM lets him enter a string.
 REM If at any point the user chooses Cancel (a 0 return code),
 REM we Return.
 REM If he enters a name, we use a SELECT WHERE statement to see
 REM if the name he entered is in our names file.
 REM If it is not, we go to the notfound subroutine.
 REM If it does exist, we then check to see if it is unique.
 REM If it is, we're done.
 REM If it is not unique, we ask the user to enter a first name
 REM so that we can try to find the correct user.
 REM If there is no match now, we again go to the notfound subroutine.

getname:
 REQUEST "Give the name of a contact","",4,retcode%,name$,20
 IF retcode% = 0 THEN RETURN
 FILE "Names"
```

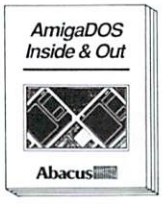
Listing continued on p. 84

Knowledge is Power, Abacus has the Fuel.

Amiga C for Beginners- an introduction to learning the popular C language. Explains the language elements using examples specifically geared to the Amiga. Describes C library routines, how the compiler works and more. $16.95

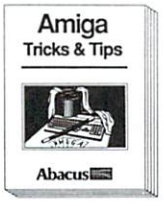


Amiga Machine Language- is a comprehensive introduction to 68000 assembler machine language programming and is THE practical guide for learning to program the Amiga in ultra-fast ML. Also covers 68000 microprocessor address modes and architecture, speech and sound from ML and much more. $19.95



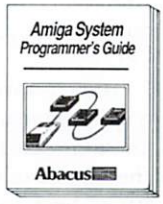
AmigaDOS Inside and Out-covers the insides of AmigaDOS from the internal design up to practical applications. Includes detailed reference section, tasks and handling, DOS editors ED and EDIT, how to create and use batch files, multitasking, and much more. $19.95

Amiga C for Advanced Programmers- contains a wealth of information from the pros: how compilers, assemblers and linkers work, designing and programming user friendly interfaces using Intuition, managing large programming projects, using jump tables and dynamic arrays, coming assembly language and C codes, and more. Includes complete source code for text editor. $24.95

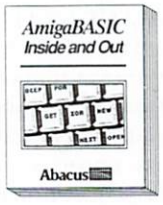


Amiga Tricks and Tips-follows our tradition of other Tricks and Tips books for CBM users. Presents dozens of tips on accessing libraries from BASIC, custom character sets, AmigaDOS, sound, important 68000 memory locations, and much more! $19.95

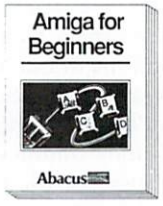
Amiga System Programmer's Guide- comprehensive guide to what goes on inside the Amiga in a single volume. Only a few of the many subjects covered include the EXEC structure, I/O requests, interrupts and resource management, multi-tasking functions and much,much more. $34.95



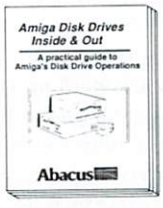
AmigaBASIC Inside and Out- THE definitive step-by-step guide to programming the Amiga in BASIC. Every AmigaBASIC command is fully described and detailed. Topics include charts, windows, pull down menus, files, mouse and speech commands. $24.95

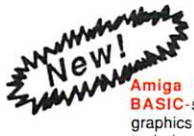


Amiga For Beginners- the first volume in our Amiga series, introduces you to Intuition (Amiga's graphic interface), the mouse, windows, the CLI, and Amiga BASIC and explains every practical aspect of the Amiga in plain English. $16.95

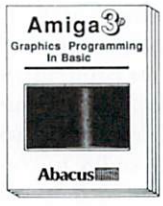


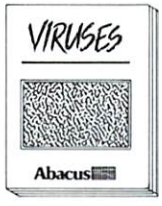
Amiga Disk Drives-Inside & Out- is the most in-depth reference available covering the Amiga's disk drives. Learn how to speed up data transfer, how copy protection works, computer viruses, Workbench and the CLI DOS functions, loading, saving sequential, relative file organization, more. $29.95





Amiga 3-D Graphics Programming in BASIC- shows you how to use the powerful graphics capabilities of the Amiga. Details the techniques and algorithm for writing three-dimensional graphics programs: ray tracing in all resolutions, light sources and shading, saving graphics in IFF format and more. $19.95





Computer Viruses: a high tech disease- describes what a computer virus is, how do viruses work, viruses and batch files, protecting your computer and designing virus proof systems and more. $18.95

Abacus

Circle 124 on Reader Service card.

we use from several places. It has to handle new contacts and contacts with the same last name. We first ask you to enter a last name. We then use the query function, SELECT, to set up a query filter and see if there are any records in the Names file with that name, and then we SELECT the FIRST one that qualifies. We use LIKE rather than = so that the search will ignore case.

If SELECT FIRST returns nothing and leaves us at the end of the file, then no record matched the last name entered. If that happens we call the subroutine *notfound*, which asks you if you want to create that contact; if so, it calls *entname* to let you go ahead.

If SELECT FIRST returns one record, we see if there are any other matches, because two people could have the same last name. If SELECT NEXT leaves us at the end of the file, then there was only one match. We go back to the first record and return it. If SELECT NEXT yields another matching record, we ask you for a first name. Then we define a query filter with both the first and last name. If nothing matches, we once again call *notfound* and give you the chance to create a new record. If there is a match, we return it.

We assume in this procedure that no two records have the same first and last names, an assumption that could be wrong. To make the routine handle that case, add the SELECT NEXT and test logic we used earlier, and then decide how you want to choose from the matching records.

The remaining routines (*listnames*, *listallcalls*, *listcall*) display reports. We use ? in *listallcalls* and *listcall* so that you can easily send their outputs to the printer.

We use the @ operator to control the starting column of each field and text piece, and the & operator to give the column's length on the report. We then use a basic set of building blocks to define the other parts of the reports.

HEADING lets us place text, such as a title or column headings, at the top of each page. UL turns on underlining, while ATTR OFF turns off all special display or print attributes.

The SELECT statement determines both what fields we will print and where they will appear. We again use @ and & to control field placement. SELECT lets you include fields from several linked files, as we do in *listallcalls*.

The WHERE clause lets you enter a query filter to control which records you want. In *listallcalls* we print the records with matching *Link* fields, so that we can list each name with its matching calls. We do not print contacts for whom we have no calls. In *listcall* we first call *getname* and then use WHERE to get only the calls for the single contact name (and, thereby, the *Link* value) that you entered.

We use the ORDER command to sort the records we retrieve. We sort primarily on last name and then on first name. We conclude each SELECT ►

```
 SELECT WHERE Lastname LIKE name$
 SELECT FIRST
 IF EOF ("Names") THEN GOSUB notfound:RETURN
 SELECT NEXT
 IF EOF ("Names") THEN SELECT FIRST :RETURN
 REQUEST "Give the first name of the contact","",4,retcode%,fname$,20
 IF retcode% = 0 THEN RETURN
 SELECT WHERE Lastname LIKE name$ AND Firstname LIKE fname$
 SELECT FIRST
 IF EOF ("Names") THEN GOSUB notfound
 RETURN

 REM The notfound subroutine tells the user that the name he entered
 REM was not in our names file, and then asks him whether he wants
 REM to create a new Names record for that name.
 REM If he says yes, we call the entname subroutine so that he can
 REM enter a new name.

notfound:
 REQUEST "The contact " + name$ + " was not found","Create it?",1,retcode
 IF retcode% <> 0 THEN GOSUB entname
 RETURN

 REM The listnames subroutine displays a report of all of the records
 REM in our Names file.
 REM We make some of the fields display closer together than the
 REM default to make sure that there is enough room across one line to
 REM fit all of the information in the record.
 REM We sort on the contact's last name and then first name.

listnames:
 SELECT @2&10Firstname.Names,&15Lastname.Names,Phone.Names,Address.Names
 ORDER Lastname.Names,Firstname.Names
 END SELECT
 RETURN

 REM The listallcalls subroutine displays a report of all of the
 REM calls for every name that the user has called.
 REM While in the other report we used the default headings, here
 REM we define our own header of column titles.
 REM The report will display a line for every name that has a call,
 REM and the first call for that name will also appear on that line.
 REM All of the remaining calls for that name will appear on
 REM subsequent lines.
 REM We again sort the report by last and first names.

listallcalls:
 HEADING
 ? @25;"Complete Contact Call Listing" NEWLINE
 ? @2; UL ;"Name                          ";@30;"Date    ";@40;"Time  ";
 ? @48"Note                         "; ATTR OFF
 END HEADING
 SELECT ON "Names"@2&10Firstname.Names,&15Lastname.Names, ON "Calls"
 @30CallDate.Calls,@40CallTime.Calls,@48&30Note.Calls
 WHERE Link.Calls = Link.Names
 ORDER Lastname.Names,Firstname.Names
 END SELECT
 RETURN

 REM The listcall subroutine asks the user for a name and then
 REM displays all of the calls for that name.
 REM If we have no Names record for the name the user enters, we return.
 REM It uses the link field to find those calls.
 REM We again define our own header.
 REM This time we sort the calls by date and then time.

listcall:
 GOSUB getname
 IF retcode% = 0 THEN RETURN
 link% = Link.Names
 HEADING

NEW AMNEWS

707-887-9708

3 Full Disks of Music, Art, Entertainment & Programs.

Hello Again !

I'm thrilled to report that the premiere issue of **New AMnews** was, thanks to our fine **AMiga** distributors, retailers--and YOU, a complete sell-out. You've shown us that a first-class disk publication doing things that paper just can't handle is something you've been waiting for, and we're carrying on that tradition with our second issue. Here's a preview of some of the goodies in **New AMnews**' November/December collection:

- Our productivity coverage includes a hands-on working demo of Haitex's HaiCalc spreadsheet built into Part I of Matt Leed's article on the cost of producing software, so that YOU can adjust costs and fiddle with profits; WordPerfect's MacroEditor with real macros that dramatically increase your productivity with WordPerfect; and an Icon Primer with icons and IconLab, a program that lets you handle them painlessly for a change...

- **AMiga** musicians will love the tunes that backup our features as well as our lesson in composing the blues; Artists will adore Louis Markoy's previews of upcoming art products, the comic Harv Laser created with ComicSetter, John Foust's 3D rendering tips, and other sizzling graphics and animations...

- Rob Peck's programming shell demonstrates his concept of multitasking, Denny Atkin's explanation of AREXX makes this powerful tool understandable, and Dan Travison gives CLI users some advanced Workbench 1.3 lessons--with files on disk (like the superbase listings in this issue of AMigaWorld), so you never have a THING to type in...

- We have fun for you, too: The latest news in entertainment software from Bob Lindstrom, a mouse-playable piano, previews of the Disney characters from Roger Rabbit, a playable game, a demo of the hottest game we've seen in a long time and more...

But we'll let you see the rest of it for yourself for only **$14.95** ($19.95 in Canada) -- remember, **New AMnews** features **three FULL disks** of music, art entertainment & programs ! And by popular demand, we've extended our subscription offer to **December 31, 1988:**

Subscribe with us for 1 year (six issues) for $79.95 ($110.95 Canadian), and we'll treat you to a full year's subscription to ANY Amiga paper-based magazine you want that's printed in the United States ! Just name it with your order. We're THAT sure you'll agree that *AMnews travels fast !*

Regards,

Peggy Herrington

with END SELECT, which causes Superbase to output the records it retrieved.

The DML offers much more than the basics that we have covered here, but this is enough to give you an inside track. The best way to learn the DML is to experiment, perhaps by enhancing our application. We wish you success as you work with this powerful database-management and application-development tool. ■

Bill Catchings and Mark L. Van Name are contributing editors to AmigaWorld. *Write to them at 10024 Sycamore Road, Durham, NC 27703.*

```
ORDER CallDate.Calls,CallTime.Calls
END SELECT
RETURN

REM The nonames subroutine handles the case where there is no
REM existing Names file.
REM When that happens, we tell the user and ask him if he would
REM like us to create a new one.
REM If he says to do so, we call initnames to do the work.
REM Otherwise, we stop the program.

nonames:
REQUEST "No contact name database found","Create a new one?",1,ans%
IF ans% = 1 THEN GOSUB initnames ELSE GOSUB exit
RESUME

REM The nocalls subroutine performs the same function for the
REM Calls file.

nocalls:
REQUEST "No contact call database found","Create a new one?",1,ans%
IF ans% = 1 THEN GOSUB initcalls ELSE GOSUB exit
RESUME

REM The exit subroutine is the central exit point.  We always use it
REM to stop the program.
REM We tell the user that we are stopping, close all of the databases,
REM and then clear the screen.

exit:
DISPLAY NEWLINE "Closing the databases"
CLOSE ALL
CLS
END □
```

Amiga 1000 users have waited for quite some time for a hard drive system which will keep up with their computer. Meet the FIP, the only drive which qualifies.

Custom silicon provides one to one sector interleaving, hardware data caching, DMA bursts in excess of 25 mb/second and advanced EDAC (Error Detection And Correction) hardware.

The basic FIP comes complete with a 20 MB drive, power supply and a two slot chassis. Three more ST412 drives may be added externally. The incredible performance of the FIP is backed by a one year warranty from a company that has manufactured performance for over eight years.

Amiga is a trademark of Commodore Business Machines, Inc.

Airbrush Painting

#1

An occasional series of tips, techniques and tricks for creating more imaginative Amiga graphics.

By Joel Hagen

ONE DIFFERENCE BETWEEN painting with a computer and painting with oils or acrylics is line character. The computer brush draws crisp, consistent lines while the "real" brush and paint create more controllable strokes with a certain random, organic quality. One way to approximate this character in the computer is to use the airbrush as a line tool.

The airbrush tools in most paint packages are similar. Although I will use terms specifically relating to DeluxePaint II, it should be easy to translate DPaint terminology to other paint programs. The airbrush simulates a paint spray. The brush you select (any one will work) is randomly stamped onto the screen within a given area at a fairly high rate of speed. Although large brushes may be used, the real power lies in judicious use of brushes consisting of a single pixel or a group of individual pixels. When "sprayed" on a screen, these brushes produce the familiar soft areas of color you associate with an airbrush.

By setting the right-hand mouse button to the screen background color, you can use that button as an eraser while the left button lays down a foreground color. By setting the two buttons to different values of the same color, it is easy to produce subtle gradations by alternating buttons while working on an area. This is an effective way to highlight and shade a form while you are drawing it. Using related colors, such as a blue and a green, for the two buttons allows complex mixing, giving the illusion of more than two colors in an area (1). (Note: Numbered references in the text refer to corresponding sections of the "Inspector" illustration accompanying this article.) Going into that area again with two new colors can build up an even greater illusion of subtle color changes (2). This method characterizes pointillism, an offshoot of the French Impressionist school of painting, and is an excellent way to get more apparent colors from a 16- or 32-color palette. This mixing of color pixels is also referred to as dithering and is used by digitizing software to achieve realistic color in digitized images. Studying these images is a good way to learn effective airbrush color mixing.

For example, you can use Digi-View to digitize an image with the sharpness control set up between five and 10 (there is also a dithering option in the Color control). Capture the image in 16 or 32 colors and load it into a paint program. Magnify different areas of the image to see how the limited palette can produce the illusion of more colors (3).

Specifically relevent to line character is the airbrush's adjustable spray pattern. Selecting the tool with the right-hand mouse button causes a circle to appear on the screen. You can make it larger or smaller by dragging the mouse. Most people use a large pattern, perceiving the airbrush as a broad painting tool. In fact, it can be a powerful line tool by reducing its size to a very small circle and selecting the single pixel for a brush. This makes a line with a rough character, somewhat like charcoal or dry brush (4). The speed of your stroke effects the density of the line, giving you some physical control over it. Drawing in this mode produces richer textures than the more typical solid-color style of computer art.

"ACCENT" LOGO BY CHRIS SPOLLEN

Using your paint program's brushes in airbrush mode can give your work the texture and character of "real" painting.

Try rough sketching with a broad pattern, then doing finished linework with very narrow patterns, remembering the facility to erase with the right-hand mouse button for cleanup. Try three or four closely related values of brown or gray in sketching. To increase line control while painting, set the mouse speed in Preferences down to two or even four.

Form Out of Chaos

The airbrush mode lends itself to a very interesting kind of painting. Often, the most intriguing images come from sessions where the artist has no plan; instead, one searches the image for direction as it unfolds. The artist must seek suggestion of form as he or she works, pulling it out of the chaos, focusing on it, and refining it. Such an approach requires starting a painting with virtually no preconceptions, then gradually applying increasing discipline to raise the image. The accompanying illustration, "Inspector," is an example of this technique.

I find it effective to work with a range of five to ten values of the same color. In the case of "Inspector," eight values of a sepia tone were used, ranging from very dark to fairly light (5). With these values laid out in the palette in sequential order, I selected them as a Range. This allows features of DeluxePaint II such as Blend and Shade to operate on those and only those colors. I set the darkest shade to be the background color and cleared the screen to that color. Selecting mid-range values, and using Color mode, I lightly sprayed a small area of the screen quickly and evenly (6). This organic texture is more interesting than the sterile look of a mechanical gradient fill. Using smaller and smaller patterns, I began lightening and darkening areas of the screen, spraying with the other sepia colors in my palette. Shapes and features soon began to suggest themselves for emphasis. Switching to the Shade mode and line tool, I used a very small brush to begin drawing lighter and darker lines. The left-hand mouse button darkens the area beneath it, while the right-hand button lightens it. The Shade mode makes subtle lines (7), where a solid color drawn across the image stands out crisply (8).

As the picture took shape, I used the background color to cut away large areas, focusing on the face. Final details in the eyes, teeth, and ornaments were drawn with the Blend mode to create contrasting smooth areas.

"Inspector" was done in the hi-res 640 × 400 mode. Painting in this airbrush style, interlace flicker is never noticeable. Setting the menu colors (zero and one) to black and medium gray reduces their relative contrast and virtually eliminates flicker in the menu, as well. ■

Exploring AmigaDOS 1.3*

By Mark L. Van Name and Bill Catchings

Team info.phile concludes its five-part "mini-series" on new and improved commands and features in AmigaDOS 1.3 by exploring RAD:—1.3's innovative recoverable-RAM disk. In this final episode you may not learn who really shot J.R. or whether Krystle is actually Alexis' half sister by the last czar of the Romanov dynasty, but you will discover the secrets of "The RAM Disk That Wouldn't Die."

**Editor's Note: To get the information on version 1.3 to you as quickly as possible, the authors have had to use a "gamma" version of AmigaDOS 1.3. A gamma version is one that Commodore circulates to developers and a few other groups so that those groups can see what's coming and help shake out any bugs. It is supposed to be the last unofficial release before the software hits your dealer's shelves, although Commodore reportedly has released an "omega" version. Most likely, the final version will have the same new CLI commands as this gamma version,* but *Commodore still could make some changes before it releases the final version. To be safe, when you buy a copy of version 1.3, plan to spend a few minutes verifying that everything works as it is described here.*

IN OUR PAST four columns we discussed most of the new features that AmigaDOS 1.3 offers to CLI users. This column finishes our coverage of 1.3 with a look at a particularly useful new addition, a new RAM disk.

A New RAM Disk

Yes, 1.3 includes a driver for a new RAM disk, RAD:. Because AmigaDOS already offered the RAM: RAM disk, this new facility obviously raises several key questions:

First, what was wrong with the old one?

Nothing—well, that's not quite true, as we will discuss in a few paragraphs, but the fact is that RAM: worked reliably for most of us. Fortunately, it's not gone. You can still use RAM: just as you did before. You can even have both RAM disks available at once, if you have enough memory to spare.

So, why bother creating a new one?

The answer comes from the Guru we all hate to see. When your Amiga crashes and the Guru visits, you lose everything in memory at that time—including everything in RAM:. This is RAM:'s big failing; even if you can reboot your system without turning it off, the contents of RAM: are history. When you reboot your system you have to reload everything you put there. If you were unlucky enough to be temporarily storing a program's output there, you will have to run the program all over again. You also lose everything in RAM: any time you manually reboot.

RAD: solves this problem. Unlike RAM:, it is recoverable—meaning that its contents survive manual reboots, even if they follow a Guru visit. Several Amiga software and hardware vendors, notably ASDG, have offered recoverable-RAM disks for some time. Now Commodore has followed suit by including one as part of its standard AmigaDOS 1.3 software.

There are two limits on the ability of ►

MISSION: CON-BAT™

RECONNAISSANCE GAME

Out-Fly, Out-Con, Out-Wit, Out-Rageous! At last, the treaty was signed. They agreed not to build any more missiles. Only a fool would take them at their word.

Your mission, should you choose to accept it, is to fly night reconnaissance, and find out what they're up to. Remember, the best offense is a good defense. You'll shoot film and then shoot home. If you're spotted, they'll shoot you full of holes. Unless, of course, you do some pretty slick flying. Can you survive?

Questrek's exclusive *Time Trak* feature means you never fly the same mission twice! Mouse control gives you ultimate maneuverability! Choose from 4 degrees of difficulty and remember only your highest score... your personal best! It's the ultimate for Amiga users only!

Questrek
562 McCollam Dr.
San Jose, CA 95127

For Dealer Inquiries Call: (408) 923-9294

WARNING: Night flying may be hazardous to your health.

Circle 195 on Reader Service card.

RAD: to recover data after a reboot. First, nothing in main memory survives when you turn off your Amiga's power, including the contents of RAD:. If your Amiga crashes badly enough to force you to turn it off so that you can reboot it, RAD: will be lost as surely as RAM:.

Also, the preliminary Commodore documentation warns that it is possible for a crash to trash the contents of RAD:. Theoretically, this can happen even after a crash that lets you manually reboot your system. This problem, however, is likely to be very rare. We could not get it to happen; we induced crashes and manually rebooted several times, but RAD: survived intact every time. Should you be unlucky enough to encounter one of these rare crashes, don't give up. You can run DISKDOCTOR on RAD:, just as you can on any disk, and it might be able to recover your files.

The fact that you can run DISKDOCTOR on RAD: is a clue to just how much like a real disk Commodore treats it. RAD: differs greatly from RAM:, both in how you set it up and how AmigaDOS manages it.

Getting RAD: Ready to Roll

You have to go through a little more work to set up RAD: than RAM:.

In part this is because RAM: is so extremely easy to establish. Copy a file to RAM:, and it's ready to go. It is always exactly as big as it needs to be to hold its current contents, and no bigger. This means that RAM: never consumes more memory than it has to use to hold its current contents. To see its flexible size in action, copy a file to RAM:, run INFO, copy another file to it, and then run INFO again. You will see that the size of each of your real disks is fixed, while their percentage in use varies with what you put on them. Check RAM: and you will see that its size varies, getting bigger after each file you copy to it, but that it is always 100% full.

RAD: behaves very differently. Basically, it acts like any other disk. You give it a size when you set it up, and it stays that size. No matter how much free memory you have, you cannot put a file into RAD: unless RAD: is big enough to hold it. Also, no matter how little you have in RAD:, it always consumes its size in memory. This stable size makes it easier for AmigaDOS to make RAD: recoverable. The cost to you is that you must make sure that you can spare enough memory at all times to hold the full size of RAD:.

To set up RAD: follow the same procedure you would use to set up any new disk that you attached to your Amiga.

First, put an entry for it in the file DEVS/MOUNTLIST on your Workbench disk. MOUNTLIST entries can be daunting, so this requirement is not good news for most of us. Fortunately, AmigaDOS 1.3 comes with the following sample RAD: entry in MOUNTLIST:

```
RAD:Device = ramdrive.device
Unit = 0
Flags = 0
Surfaces = 2
BlocksPerTrack = 11
Reserved = 2
Interleave = 0
LowCyl = 0 ; HighCyl = 21
Buffers = 5
BufMemType = 1
#
```

Because we will discuss MOUNTLIST entries in detail in our next column, let's skip the explanation of most of these lines for now. You need to understand only a few to control RAD:.

The first line gives the name of the device and the name of the piece of software—the handler—that manages it. Although Commodore gave it the name RAD:, you could pick your own device name if you wish. We recommend you stick with the given name because standard names make system discussions easier. You must not, however, change the device handler, RAMDRIVE.DEVICE, which is a file in your Workbench disk's DEVS directory; you must leave it there if you ever plan to use RAD:.

The other relevant line is:

```
LowCyl = 0 ; HighCyl = 21
```

The HighCyl number in this line ultimately controls the size of RAD:. You can calculate that size with the following formula:

$$\text{size} = (\text{block size}) \times (\text{BlocksPerTrack}) \times (\text{Surfaces}) \times (\text{HighCyl} - \text{LowCyl} + 1)$$

This formula is basically the one that you would use to figure the size, or capacity, of any disk. (If you want to know exactly how we got this formula, either consult a book on disk drives or send us letters demanding that we tell you in a future column.)

This formula may at first appear to contain a lot of variables, but it really doesn't. AmigaDOS uses 512-byte blocks consistently, so the block size is a constant. The other variables all come from the MOUNTLIST entry lines of the same names. You should always leave BlocksPerTrack, Surfaces, and LowCyl as they appear in that file, so most of the rest of the equation is also simpler than it looks.

Thus, when we plug the numbers from the standard RAD: MOUNTLIST entry above into this formula, it becomes:

$$\begin{aligned}\text{size} &= (512) \times (11) \times (2) \times (21 - 0 + 1) \\ &= 512 \times 11 \times 2 \times 22\end{aligned}$$

or, 247,808 bytes, which is 242K. (Think of 512 as half of 1K, and the formula is even simpler: $0.5 \times 11 \times 2 \times 22$, or 242.)

Because all of the other numbers in the formula are fixed, HighCyl is the key to your control of the size of RAD:. Change HighCyl and you change RAD:'s size. For example, if you cannot afford the fixed overhead of 242K of RAM tied up for RAD:, try a smaller HighCyl. Set HighCyl to 10 and you get:

$$\text{size (in KB)} = 0.5 \times 11 \times 2 \times 10$$

or, 110K. Experiment with different HighCyl numbers until this formula gives you a RAD: size that makes sense for your Amiga.

Final Preparations

Once you have chosen the size and updated the RAD: MOUNTLIST entry appropriately, you 're almost ready to go. You still must prepare it for AmigaDOS just as you would have to prepare any other disk.

First, mount it with the command:

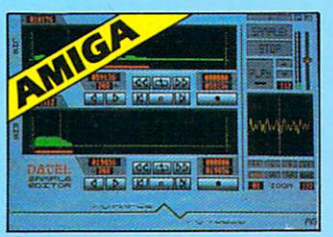
```
MOUNT RAD:
```

This command makes AmigaDOS aware of the existence of RAD: and ready to use it. Next, format RAD: so that it can hold AmigaDOS files. To do so, use the standard FORMAT command, as follows:

```
FORMAT DRIVE RAD: NAME
  "Recoverable RAM Disk" NOICONS
```

Unlike a floppy disk FORMAT, this ►

DATEL COMPUTERS



AMIGA PRO SAMPLER STUDIO

- A top quality sound sampling system at a realistic price.
- All the usual features of a sampling system plus many more.
- 100% machine code software for realtime functions.
- Hires sample editing.
- Realtime frequency display.
- Realtime level meters.
- Files saved in IFF format.
- Adjustable manual/automatic record trig level.
- Variable sample rate and playback speed.
- Separate scroll line waveform windows plus zoom function with Edit windows for fine accurate editing.
- Hardware compatible with many other software packages.
- Software files can be used within other music utilities.
- Reverse, copy, mix, clear plus other edit facilities.
- Microphone and line input ¼" Jack and Din connections.
- 3D shot of sound waveform. Wave editor to design your own waveforms or adjust existing ones.

ONLY $199.99 COMPLETE SYSTEM, PLEASE STATE A500/1000/2000

MIDI MUSIC MANAGER

- **At last a truly professional Midi package for the Amiga at a realistic price.**
- 8 realtime Midi tracks for record/playback
- Works with standard IFF files
- Adjustable track length – limited only by available memory
- Use as a multi-track Midi recording studio
- Works with many Midi interfaces including Datel Midi Master (see Ad) and Nimetics
- Editing facilities for corrections and track joining etc.
- Internal or External Midi clock control
- Play sampled sounds on Amiga from any Midi track
- Full dubbing – listen to one track while recording another
- Perfect companion for Pro Sampler Studio or any music application

ONLY $59.99

MIDIMASTER

- Full Midi Interface for A500/2000/1000 (Please state model)
- Compatible with most leading Midi packages (inc. D/Music)
- Midi In – Midi Out x 3 – Midi Thru
- Fully Opto Isolated
- No need to pay more – Full Midi standard

ONLY $59.99

PRINTER CABLES

- 25 pin 'D' to 36 way Centronics parallel lead.
- A 500 or 1000 please state.
- 1.2m length.

ONLY $14.99

- 25 pin 'D' to 25 pin 'D' – serial printer lead.
- A500 or 1000 – please state.
- 2m length.

ONLY $14.99

DATA/SWITCH BOXES

- A/B type connect two printers to one computer or (vice versa).
- Centronics connections or RS232 (Serial) connections (25 pin) please state.

ONLY $34.99

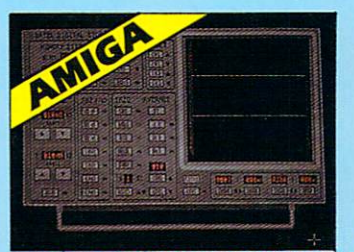
- ABC type connect three printers to one computer (or vice versa).
- Centronics or RS232 connections.

ONLY $49.99

AMIGA BURST NIBBLER

- Superfast disk copier will copy almost any commercial disk.
- Friendly user Interface – Mouse driven throughout.
- Completely compatible with Amiga multitasking system.
- Special 'Strategy Files' cope with even the most advanced protection schemes.
- Fast operation – typically around 80 seconds.
- Even decrypts many encoded programs including D.Print/Video Paint/Music/II etc.
- Works with one drive or two.
- Multiple copy option allows you to make many copies from one original.
- Copy 1 or 2 disk sides – up to 85 tracks.
- Unique 'INFO' analyser – displays vital disk parameters, including sector distribution, data dispersion, etc. etc.
- Special format parameters for non standard formats.
- Full verify option.
- Easy to use Icon driven program takes the mystery out of disk backup.
- Compatible with all Amigas.
- Regular updates available – we always ship the latest.

ONLY $49.99



DATA ACQUISITION UNIT

- Turn your Amiga into a sophisticated measuring instrument capable of measuring a wide range of data inputs.
- Sample and display events from microseconds to hours – with amplitudes from millivolts to 50 volts.
- A Hardware/Software package with very high spec including: –

DIGITAL SCOPE DISPLAY – 2 channel inputs. Manual or continuous display. Timebase 500ms/div to 20μs/div. – accurate to 5%

- 6 bit flash conversion gives 2 millions samples/sec.
- Adjustable trigger level. 5 x zoom function. Memory scan
- Load/Save functions, waveform enhancement, graph displays.
- Hardware contains onboard RAM and Crystal dividers

PLOTTER DISPLAY

- 2 channel display
- Memory recall display
- Timebase range 1 sec to 10hrs per plot.

All features found on units costing thousands of pounds!

ONLY $179.99 for hardware/software/please state A500/1000/2000

ROBOTARM

– Full Function
– 5 Axis Movement

- Explore the fascinating science of Robotics with this full feature Robot Arm.
- Human like dexterity – with 5 Axis of movement it is so versatile. It can manipulate small objects with amazing ability.
- Easily controlled using 2 Joysticks (any 9 pin type) or connect to your Amiga with our Interface + Software to give Computer/Robotic control (see Interface offer).
- Comes with Accessories including 'Finger' Jaws, Magnetic Attachment, Shovel Scoop, 4 Stabilizing Suction Base Legs, etc.
- Uses 4 HP2 batteries (not supplied) to power motor movement so uses no computer power.
- Self contained, ready to use (except batts, joysticks).

Complete with interface/software

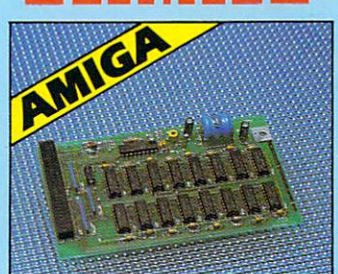
ONLY $129.99

EXTERNAL 3.5" DISK DRIVE

- Single or twin drive models available
- Slimline extra low profile – only 6" long!
- Top quality NEC drive mechanism
- Throughport allows daisy chaining other drives
- Superbly styled case in Amiga colours
- Fully compatible
- 1 meg unformatted capacity per drive
- Good cable length for positioning on your desk etc.
- Twin drive model takes up very little space
- Value for Money – before you buy a drive please compare the features – these drives have NEC mechanisms housed in superb cases. Some products are built to a price and not a standard. Don't spend a few pounds less and end up with 'rubbish' – and remember you are buying from the manufacturer.

ONLY $169.99 SINGLE DRIVE

$299.99 FOR TWIN DRIVE



512K RAM EXTENSION CARD

- Available with/without calendar clock option
- Simply plugs internally into a A500 slot
- Switch in/out with switch supplied
- Fitted in minutes – no soldering etc.
- With calendar/clock onboard time/date automatically booted
- Battery backed to retain time/date

ONLY $69.99 card only 0 RAM

ONLY $89.99 card with clock only 0 RAM

Modula-2

Software Development System

for

AMIGA $ 249

Demonstration disk $ 10

M2Amiga is a software development system for Modula-2 based on an extremly fast single pass compiler. It is fully integrated into Amiga Workbench and is easy to use from CLI or Workbench. It runs on all Amiga models with a minimum configuration of 512k RAM and one disk drive.
M2Amiga has been developed specially for the Amiga and therefore optimally supports the features of this unique computer.

- Produces optimized native code. Full support of latest edition of Modula-2.
- No intermediate code needed for library calls and parameter passing.
- Supports FFP, 32/64 bit IEEE reals formats, even mixed within the same program.
- Easy access to registers, allows the insertion of inline code.
- Full interface definition to the Amiga's operation system.
- The best runtime system currently available on the Amiga. Opens and closes all used libraries, captures all GURUs and releases all used resources after program crash or termination. Routines for System requesters enable user interface consistent with the Amiga's Intuition.
- The emacs based editor places the cursor on compilation errors and explains them in full text.
- Links in just a few seconds. Stand-alone applications are compact and fast.
- Besides the handy manual, an introductory guide to Modula-2 is included.
- Demo programs show the use of various features of the Amiga.
- For professional program development special utilities are available.
  + Source Level Debugger, the new way of debugging your programs.
  + Object file converter allows linking of routines written in other languages.
  + Linker for devices or libraries.
  + Modula-2 Amiga Programming System Environment

We have Modula-2 Compilers for HP-UX, IBM/370, PCs (Taylor, M2SDS, JPI), OS-9 and Sun, tomorrow even more!
Texas residents add 8% sales tax. International Orders add $ 20 shipping.

FORMAT is fast; you will only have to wait three to five seconds to format the standard 242K RAD:. If you pick a name other than RAD: for your recoverable RAM disk MOUNTLIST entry, you must use that name in place of RAD: in the above two commands. Also, the NAME in the FORMAT command can be anything you want, and the NOICONS keyword is, as in any other FORMAT command, optional.

By the way, it might seem like a good idea to put these commands in your S/STARTUP-SEQUENCE file, but don't do it. AmigaDOS executes that file every time you boot or reboot your Amiga, and FORMAT destroys the contents of any disk it touches, so you would be forcing AmigaDOS to wipe out RAD: every time you reboot. That would defeat the whole point of using a recoverable RAM disk. We suggest instead that you put these commands in a batch file that you can execute anytime you power up your Amiga. This approach stops the system from ever automatically erasing RAD: for you.

Once you have executed these two commands, you can treat RAD: like any other disk, except that it will run as fast as RAM:. It will also give you the comfort of knowing that a visit from the Guru will not trash its contents.

If you run INFO now, it will show RAD: with the size you picked. This size will not change whether you leave RAD: empty or fill it with files. INFO will also show RAD: as having two blocks used, even if you have not yet copied anything into it. Don't worry—those two blocks should be in use because AmigaDOS uses them to contain some of its standard control information.

In addition to treating RAD: as a very fast disk, you can also use it like a disk in other ways. With the AmigaDOS 1.3 KickStart software you can actually copy your Workbench disk to RAD: and reboot from it as if it were a Workbench. If you have the memory to spare, this can greatly speed rebooting.

You can also make RAD: a bit faster by formatting it to run under the new AmigaDOS 1.3 Fast File System (FFS). To do so, add the following line to the RAD: MOUNTLIST entry:

```
DosType = FFS
```

If you choose to run RAD: under FFS, however, you cannot reboot from it. To make your Amiga behave correctly, when you add the above line to the RAD: MOUNTLIST entry you must also add either:

```
BootPri = -127
```

or

```
Flags = 2
```

Because RAD: is already so much faster than a floppy or even a hard disk, we prefer to use the old file system with it and be able to reboot from it, rather than going with the slightly faster FFS.

Too Recoverable?

One problem remains with RAD:—if you need to get back the memory it is using, what do you do? Commodore initially found that RAD: was so hard to kill that the only way to get rid of it was to turn off your Amiga, a less than ideal solution. Commodore offered an alternative answer to this problem with a late addition to AmigaDOS 1.3: the REMRAD command.

REMRAD deletes all of the files in RAD: and gives you back all but about 512 bytes of the memory that RAD: consumed. REMRAD takes no parameters; you just enter:

```
REMRAD
```

and RAD: is gone. Actually, if you run INFO it will show the line:

```
RAD:Not a DOS disk
```

RAD: will vanish completely the next time you reboot your system.

The recoverable-RAM disk RAD: and the many AmigaDOS improvements that we discussed in our previous four columns make AmigaDOS 1.3 a "must have" for frequent CLI users. We plan to upgrade to the official release as soon as it is available, and we encourage you to do likewise.

Next time we will examine the Mountlist file and how you can use it to control everything from the RAD: RAM disk to a hard disk for your Amiga. Until then, we wish you fun and good luck as you experiment with AmigaDOS 1.3! ■

1988 *AmigaWorld* Readers' Choice Awards

DEWEY WINS! No, wait, that's the wrong headline. But the results *are* in for the 1988 *AmigaWorld* "Readers' Choice Awards." Voting was heavy and the campaigns spirited (George and The Duke would be envious). While some inevitable ballot-box stuffing was attempted (it's rumored that nearly half a million entry forms are still floating around somewhere in Cook County, Illinois), we feel that the results are a fair and honest representation of our readers' opinions on the best and the brightest among Amiga products.

We entered the ratings from each ballot into a staff-written Amiga program (ineligible for an award so it would not skew the results in its favor) that calculated each product's ratings and the number of votes it received. Products were ranked by their Overall rating from 1 (the lowest) to 10. Some products that received very high ratings from loyal users were not eligible for an award because the number of ballots they received was far too small to represent a meaningful sample; we apologize for such omissions. The top-rated product in each category received the prestigious Readers' Choice Award (with selected bon mots from our readers); the First and Second Runners-Up will receive lovely consolation prizes.

The seven categories (Creativity, Games, Productivity, Hardware, Utilities, Home, Programming) are broader than strict program types (database, graphics, educational, and so forth). Creativity includes graphics, video, music, and desktop publishing—everything you need to bring your imagination to life. Games is packed with fun diversions. Hardware includes memory expanders, hard drives, digitizers, genlocks—anything you can attach onto or plug into your Amiga. Home covers educational, home inventory, and personal finance programs. Productivity outlines software to make your business more efficient—spreadsheets, databases, word processors, accounting packages, and telecommunications programs. Programming includes languages and utilities that let you write your own applications. Utilities is a catch-all category for useful programs that accomplish a variety of tasks.

Without further ado, the winners are:

CREATIVITY

1. DeluxePaint II
Electronic Arts
$129.95

Ease of use	9.6
Flexibility	9.7
Professional features	9.4
Overall	9.56

Considered by artists to be the standard against which all other paint packages are measured, DeluxePaint II is fast to learn and intuitive to use. The flexible custom brush, stencil, and background tools were the forerunners of similiar features in other packages. You can create images up to 1008 × 1008 pixels and give them depth with the Perspective tool. If a painting technique or effect exists, it is probably included in DeluxePaint II.

"If you want to do a project quickly and efficiently, use DeluxePaint II."

2. Digi-Paint
NewTek
$59.95

Ease of use	9.0
Flexibility	9.3
Professional features	8.0
Overall	8.78

A Hold-and-Modify (HAM) paint program, Digi-Paint lets you perform special effects such as rubthrough for a watercolor look, flip a screen for a mirror image, and create the negative of a screen.

3. Photon Paint
MicroIllusions
$99.95

Ease of use	8.0
Flexibility	8.5
Professional features	8.5
Overall	8.33

Supporting PAL, Overscan, and NTSC standards, Photon Paint is a HAM paint program that lets you tilt, rotate, resize your brush, plus map it to 3-D objects.

ILLUSTRATED BY RICHARD STEADHAM

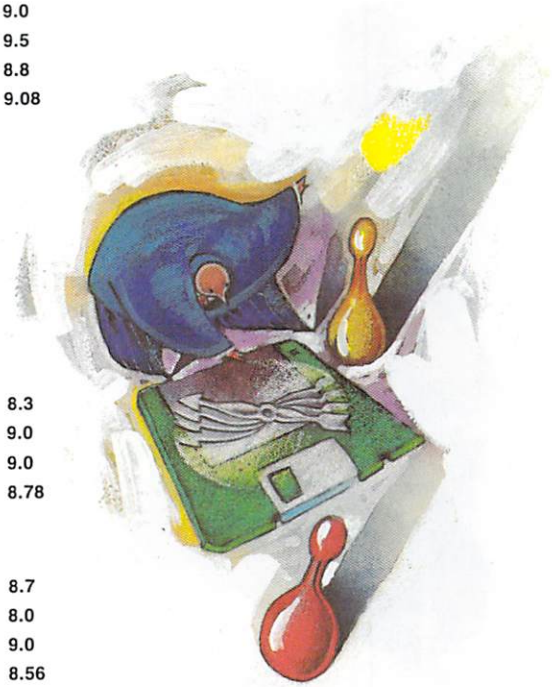
GAMES

1. Bard's Tale I
Electronic Arts
$49.95

In this fantasy role-playing adventure, you assemble an exploring party of six characters and begin your quest through the city of Skara Brae to destroy the evil wizard Mangar the Dark. As you travel around the city's three-dimensional streets, buildings, and dungeons, you will have to fight off assorted monsters and villains who try to block your progress. Your characters gain experience that you can exchange for higher levels of fighting ability, magic, dexterity, and so on. Actions are controlled with the mouse or single-key commands.

"When you open the package, make sure you've got plenty of free time. This one is addictive."

Entertainment value	**9.0**
Presentation	**9.5**
Longevity	**8.8**
Overall	**9.08**



2. Shanghai
Mediagenic
$39.95

Shanghai arranges mah-jongg tiles in an intricate pattern for you to remove in matching pairs. Remove all the tiles and you win.

Entertainmant value	**8.3**
Presentation	**9.0**
Longevity	**9.0**
Overall	**8.78**

3. Earl Weaver Baseball
Electronic Arts
$49.95

A statistics-based simulation, Earl Weaver Baseball lets you call the plays from the dugouts of big-league ballparks. Past and present major leaguers fill out the rosters.

Entertainment value	**8.7**
Presentation	**8.0**
Longevity	**9.0**
Overall	**8.56**

PRODUCTIVITY

1. Online!
Micro-Systems Software
$69.95

In addition to telecommunications basics such as auto-answer, auto-redial, capture to disk, and a phone directory, Online! offers 20 macro keys, an editable buffer, and a chat mode. The program's script language and unattended calling feature let you automate your sessions. Pass a file through the translation tables, and you can change one or more ASCII codes to any other ASCII code—a handy feature for interfacing with non-Amiga systems. Online! supports 300, 600, 1200, 2400, 4800, 9600, and 19,200 baud rates, plus even, odd, none, mark, and space parities.

"I bought it two years ago, and it's still the best on the market."

Ease of use	**8.4**
Flexibility	**8.4**
Advanced features	**8.4**
Overall	**8.4**

2. Microfiche Filer
Software Visions
$99

Capable of storing text and graphics, Microfiche Filer is a database that takes a different approach. You scan your sorted files in the same manner as a microfiche reader. The update, Microfiche Filer Plus, will be able to store sounds and will support ARexx.

Ease of use	**9.1**
Flexibility	**8.1**
Advanced features	**7.5**
Overall	**8.25**

3. MaxiPlan Plus
Oxxi
$199

MaxiPlan Plus is a feature-laden spreadsheet that combines macros, Lotus 1-2-3 compatibility, IFF graphs, a speech option, and over 70 functions.

Ease of use	**7.8**
Flexibility	**8.6**
Advanced features	**8.2**
Overall	**8.2**

HARDWARE

1. flickerFixer
MicroWay
$595

Besides eliminating interlace flicker from hi-res screens, flickerFixer improves the quality of all Amiga displays by filling in between the scan lines to produce solid characters. The board fits into the Amiga 2000's video slot.

"Installing flickerFixer made the most noticeable improvement to my Amiga 2000 since I purchased the machine."

Ease of installation	9.0
Ease of use	9.7
Technical support	8.0
Overall	9.11

2. Digi-View
NewTek
$199.95

The Amiga's first video digitizer, Digi-View now supports overscan and Extra_HalfBrite mode. A copy stand and video camera are available at an extra cost.

Ease of installation	8.3
Ease of use	9.1
Technical support	8.5
Overall	8.63

3. TimeSaver
C Ltd
$79.95

Besides a clock/calendar with battery backup, TimeSaver offers a command line editor for the CLI, and a command line history of the last 1000 CLI commands you issued. You can also program keyboard macros.

Ease of installation	9.2
Ease of use	8.8
Technical support	7.4
Overall	8.47

UTILITIES

1. Marauder II
Discovery Software
$39.95

Intended to be used for back-up purposes only, Marauder II lets you make up to four copies of a disk simultaneously. The Decoder utility strips copy protection from programs so you can install them on a hard disk. DiskErr checks disks for unreadable data, while DiskWipe erases disks. Marauder II will also check the speed of your disk drives.

"Marauder II is great virus protection. Back up those disks with custom boot blocks and you're safe."

Ease of use	9.4
Documentation	9.2
Performance	8.7
Overall	9.11

2. Facc II
ASDG
$34.95

A Floppy ACCelerator, Facc II speeds up your disk access using a cache system. The low-memory option keeps you from running out of memory.

Ease of use	5.0
Documentation	9.5
Performance	9.5
Overall	8.0

3. Grabbit
Discovery Software
$29.95

When loaded into memory with an application program, Grabbit lets you save screens from the application to disk or print out a hard copy.

Ease of use	8.0
Documentation	7.0
Performance	8.0
Overall	7.67

HOME

1. PHASAR
Antic Software
$99.95

Ease of use	9.8
Documentation	9.0
Flexibility	9.5
Overall	9.42

PHASAR is a financial management program that lets you keep your account books on disk. You can combine income and expense accounts to analyze standings in discrete areas or check all your transactions for an overall standing. The program allows for one-time income or expenses (gifts or car down payments) that normally would skew your budgeting and cash flow. You can also perform loan comparisons, savings account analyses, and tax projections.

"Finally, my finances make sense. I can even stay within budget."

2. Mavis Beacon Teaches Typing
Electronic Arts
$44.95

Ease of use	8.5
Documentation	7.0
Flexibility	7.5
Overall	7.67

Rather than drills, Mavis teaches typing skills with famous quotes, stories, jokes, riddles, and arcade games.

3. Galileo II
Infinity Software
$69.95

Ease of use	7.5
Documentation	7.0
Flexibility	6.5
Overall	7.0

Galileo II lets you search the heavens, so you can learn about stars and planets without ever going outside.

PROGRAMMING

1. Aztec C
Manx Software Systems
$199

Documentation	8.8
Flexibility	8.5
Advanced features	9.8
Overall	9.03

While it was not the first C-language development system for the Amiga, Aztec C quickly developed a reputation as the best. In head-to-head tests against Lattice C, Manx consistantly took less time to produce shorter object code. Aztec C does not produce object code directly from C source code; rather, it first translates C source code into assembly source code, which the system then assembles. This gives programmers who are fluent in assembly language the opportunity to optimize their code.

"The precompiled include files really speed up development time."

2. ARexx
William S. Hawes
$49.95

Documentation	7.4
Flexibility	9.5
Advanced features	9.1
Overall	8.67

A macro-language that ties disparate Amiga applications together, ARexx is the hottest new item in Amiga programming. ARexx makes the most of the Amiga's multitasking capabilities.

3. C Compiler 4.1
Lattice
$225

Documentation	7.0
Flexibility	7.3
Advanced features	8.7
Overall	7.67

The standard Amiga C compiler, Lattice C has, in its last few releases, narrowed the performance gap with Aztec C. The introduction of C++, a precompiler, may put this one on top again.

ULTRA DOS UTILITIES MODULE I

Ultra DOS Utilities - Module I is the ultimate in file handling and backup system for the Amiga series of computers. Ultra DOS brings the simplicity and ease of use of the intuition operating system to AmigaDOS to:

- Perform virtually all AmigaDOS functions at the click of a mouse button
- Copy/Delete files from/to any legal AmigaDOS device
- Copy by simple or complex wild card patterns
- Copy be creation date, volume device or directory
- Quickly and easily install even the most complex software on your hard drive
- Backup valuable files on a floppy or hard drive
- Perform whole hard drive backup with multi-format feature
- Preview & edit text files
- Preview IFF picture files
- Set & clear all types of file protection

only $39

MINTY-X-MAS

CHRISTMAS CLASSICS

Enjoy your Christmas! Beautiful Christmas scenes are displayed while your computer plays your favorite holiday songs. Sing-along to Deck the Halls, Jingle Bells, Rudolph, Silent Night and more, as the lyrics to these Christmas classics scroll across the screen. Great for your holiday gatherings!

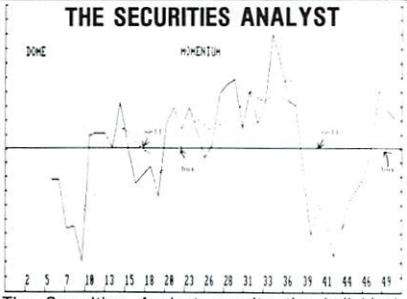
PAGEflipper™ PLUS F/X

The New Generation in Amiga Animation/Desktop Video Power and Performance

When a quality job needs to be done, professionals don't mess with toys. That's how ANI/FX and Video Works in Kitchener, Canada found PageFlipper Plus F/X. For smooth high resolution animations with multiple built-in or custom full-screen effects, plus loads of features to enhance your creative powers, there is nothing to match it.

SPECIAL $99

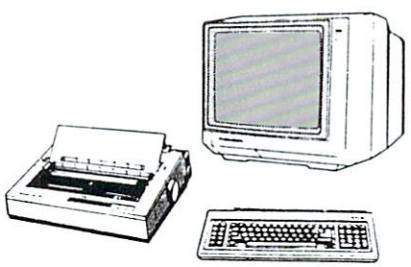
THE SECURITIES ANALYST



The Securities Analyst permits the individual investor to chart any number of stocks over an extended period of time. Using this package you can make intelligent buy-sell decision based on analysis of market trends. Analysis charts may be displayed on the screen or output to printer. A comprehensive manual on Technical Analysis of Stock Market Trends is also included. Great Buy!

INTRO OFFER $65

HARDWARE



We carry a full-line of hardware including expansion boards, disk drives, monitors, printers and computers. Call for prices and shipping charges.

As Captain Brad Stallion, you have been assigned a high priority mission by the Federated Government which has long been harried by a series of raids on the male population of its colonies. It is rumored that these raids are conducted by "The Tribe", a colony of beautiful female clones from the mysterious planet Mundo. Your mission is to locate the colony and destroy it! Please be advised that this is an ADULT adventure game!!

ONLY $29

ORDERING INSTRUCTIONS
For your convenience, you can place a phone order 24 HOURS/7 DAYS A WEEK on our TOLL-FREE LINE 1-800-638-5757. Price, Availability and Compatability Checks are also Welcome on our order line, Monday thru Friday, 9AM-4PM EST. AFTER HOURS, Orders Only Please!! When placing an order, please specify your COMPUTER MODEL, HOME & DAYTIME PHONE NUMBER, SHIPPING ADDRESS, METHOD OF PAYMENT and ITEMS ORDERED. To help us serve you better, please have all your information, including your CHARGE CARD number, ready before you call us.

ACCEPTED PAYMENT METHODS: We gladly accept payment by, PREPAID BY PERSONAL CHECK (will not hold for clearing) or MONEY ORDER; COD (continental USA only AND $4.00 ADDITIONAL); MASTERCARD; VISA; SCHOOL PURCHASE ORDERS. All payment must be in USA DOLLARS. THERE IS NO SURCHARGE FOR CHARGE CARDS and your card is NOT charged until we ship.

TECHNICAL SUPPORT
We do our very best to help you with your product selections, before you order and after you receive your product. General questions, price, and compatibility with your computer, etc. will be handled by our order staff at the time you place your order. BUT if you have specific, detailed questions about a product, printer compatibility questions etc., you will get the most help from our TECHNICAL SUPPORT LINE at 215-683-5699. Call Monday thru Friday, 9AM-4PM EST, and our trained tech staff will be happy to help you.

SHIPPING POLICY
ALL ORDERS received before 3PM EST will normally be shipped same or next business day. Out-of Stock items will be shipped by the same shipping method as original order, normally within 3 or 4 business days. All UPS shipments are sent SIGNATURE REQUIRED/NO DRIVER RELEASE. ADD the following shipping charges to your TOTAL software order.

UPS: GROUND-$4.00 (cont USA ONLY); AIR/RUSH-$7.00 (Includes Puerto Rico/Hawaii); OVERNIGHT-$12.00 PLUS $2.50 per item (must be received by 12 NOON)

PRIORITY MAIL: USA-$4.00 (includes APO/FPO); CANADA/MEXICO-$6.00; OTHER FOREIGN-$4.00 handling PLUS Actual Shipping (minimum $12.00)

RETURN POLICY
We have a liberal return policy to better service your needs. Software piracy is a problem, but as long as our policy is not abused, we will continue to honor it. If within 15 days from the time you receive an item, you are not satisfied with it for any reason, you may return it to us for either a refund, exchange or open credit. REFUNDS ARE SUBJECT TO A10%RESTOCKING FEE PER ITEM RETURNED ($5.00 MINIMUM PER ITEM). A DEFECTIVE ITEM will be replaced with the same item (NO CHARGE... of course). EXCHANGES/OPEN CREDITS will gladly be issued for the FULL PURCHASE PRICE OF THE ITEM.

Flight notes # 2F

Flight Simulator's second 3D window view is an extremely valuable flight aid, yet many of you who don't fly a real aircraft may not use it to best advantage. I personally like to set it up as a left-window view almost every time I use Flight Simulator. This is partly because pilots are accustomed to flying a left traffic pattern at non-tower airports (all turns to the left unless otherwise specified) but also because, if you think of yourself as sitting in the left seat, it is your best side view. If you're used to what a normal field of view looks like, you can "cheat" and set the second window to a wide-angle view to give yourself the most information on what's off to your left. This can be an invaluable flight cue, whether you're in an airport traffic pattern or flying cross-country. It can give even more valuable pitch information when performing aerobatics. Coming next month in this column, we'll begin an introduction to aerobatics.

Wrapping Up Europe - The deadline for entering our "Find Red Square" contest was November 15th, 1988. Current plans call for a mid-December drawing to determine the contest winner. This contest, requiring you to use **Flight Simulator** or **Jet** to locate Red Square on our new **"Western European Tour" Scenery Disk,** was as much fun for us as it was for you! Watch for another Scenery Disk promo contest next year.

"Western European Tour" Scenery Disk provides a unique international adventure, encompassing a wide variety of cultures in a rather concentrated area. You can fly from the Tower of London, past the Eiffel Tower to the towering skyscrapers of Munich in a matter of hours with Flight Simulator, or in just 30 minutes with Jet. The disk includes a radio nav-aid chart that lets you plan a complete European flight tour; detailed sectional area charts keep you on course to your specific destinations. Europe's concentrated scenery also provides good navigation cues, making it an ideal challenge for the beginning pilot's navigational skills. If you can hold a general heading you will eventually locate your destination. This disk's combination of scenery details and navigational challenges should appeal to just about everyone.

from p. 16

Posters

PhotoLab's Paint program includes an option for printing your work, this feature is difficult to understand because PhotoLab also includes the full-featured Posters print program. Having played with Posters, I think I've already been spoiled: I don't want to use any other print program. Posters can print out any picture file at any size, from one inch by one inch, to ten feet on a side.

Although I have not yet tried printing anything as large as ten feet, I am very impressed with the quality of the printouts I made using a Canon PJ–1080A printer. The interface for setting up the printouts is simplicity itself. The size of your printer paper will already be set by Preferences (if it is not—or if you want to change it—you can do so with a few clicks in the appropriate sizing gadgets). The size of the finished printout is represented on a grid by a gray box; you drag the box out across the grid to enlarge it, or back to reduce it. Each square on the grid represents one sheet of printer paper. When you have the approximate size you want, you then fine tune with a couple of up and down gadgets that will increment or decrement it in inches.

A menu item allowing you to turn off the aspect ratio enables you to size your picture to whatever dimensions you like. Without this you would be constrained by the program to the proportions of the original picture. Be warned, however, that turning off the aspect ratio can cause distortion in the finished print as you get farther away from the correct proportions.

All told, I really like Deluxe PhotoLab. Although it does not offer any major breakthroughs that I know of—there are other paint programs, image processors, and print packages with similar capabilities—Deluxe PhotoLab offers them all in one place and, more importantly, in a format that is easy to learn and to use.

EXP-1000

Fill up the inside to make more room.

By C. W. Mann

EASY TO INSTALL, the EXP-1000 from Progressive Peripherals & Software is a dedicated one-megabyte internal memory-expansion board for the Amiga 500.

In a Snap

The EXP-1000 kit contains a well-written installation manual. The illustrated text guides you through the necessary steps of disassembling your A500, installing the board, and reassembling the machine. The only other tools you will need are long-nose pliers, a chip puller (available from electronics stores), and a screwdriver. You can use a flat-blade screwdriver, but a Torx (L-formed) screwdriver (available from Sears) makes disassembling the A500 case a breeze.

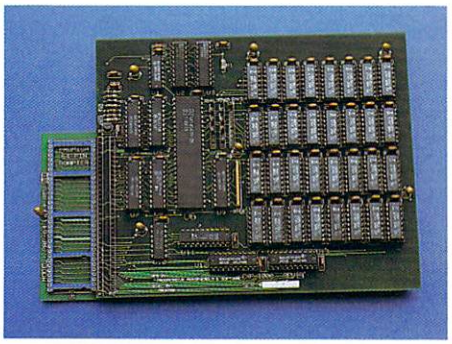
The EXP-1000 mounts in the A500's 68000 CPU socket. With the chip pullers, remove the 68000 chip from its socket on the main board. Plug the EXP-1000 into the CPU socket, then plug the CPU back into the built-in socket on the EXP-1000. Be careful, the 68000 pins are very soft and delicate. I completed the project in 30 minutes, but had to bend two upright capacitors to the limits of their leads to properly seat the expansion board.

With Commodore's A501 internal clock/calendar board in place, the EXP-1000 yielded nearly two megs of memory, double the usual amount. The operating system recognized the extra RAM without hesitation. I tested several programs on the expanded machine, and they all ran without a hitch.

Stable Ground

If you plan on moving your Amiga any distance, you'll want to remove the EXP board. About eight inches long, the EXP-1000 connects to the 68000 socket on one end, while the other end is supported by a rubber foot. The board's short, thin interface pins are all that hold it in place. The consequences of the EXP-1000 breaking loose during ship-

ping could be disastrous. A firmer anchoring system would be a welcome improvement.



EXP-1000 fits comfortably in the A500.

The EXP-1000 is no small investment. Unpopulated (without memory chips), the board costs $299.95. At this writing, the 32 memory chips needed for a megabyte cost from $11 to $13 each, bringing the total price into the $651.95 to $715.95 range. Progressive sells the populated board for $549.95. Watch the chip market carefully before you decide how to purchase your memory. No matter which configuration you choose, the EXP-1000 is a top-notch product.

X-Specs 3D

The future of computer displays?

By Louis R. Wallace

X-SPECS 3D look as if they would be more at home on a Star Trek set than in your computer room. Using stereo-vision techniques, these exotic-looking goggle-like glasses let you see Amiga images in three dimensions.

Stereo vision combines two different images into one picture. A child's ViewMaster toy and old-fashioned stereopticons both use the stereo-vision technique. Each employ slides with two different versions of the same picture; when you look through the viewing lenses, your brain combines the two pictures into one realistic 3-D image.

Because separate Amiga monitors for each eye would be bulky and expensive, X-Specs divides your eyes instead of multiplying the screens. The glasses plug into the joystick port and use a liquid crystal display (LCD) to allow only one eye at a time to receive information. When the electric current supplied to the crystal is varied, the LCD crystal changes from clear to black. X-Specs' companion software sends a current to black out one LCD, and shows the first version of an image to the eye with the clear LCD. Then the software sends a new current to the crystals so that the opposite eye can see, and shows it a slightly different image. The changes happen so quickly—60 times a second—that your eyes are unaware of the process and are fooled into combining the two images into one 3-D picture.

The process works well on X-Specs sample 3-D scenes, producing pictures that seem to have real depth. Some parts of the pictures appear to be deep inside the screen, while others look as if they are protruding eight inches out of the screen.

The X-Specs disk also includes a molecular viewer and a set of 3-D molecules. While a viewer program is simple, the stereo-molecular models are visually impressive as they rotate in and out of the screen.

Mashed Potatoes

The wackiest piece of software is SpaceSpuds, a 3-D arcade shoot-'em-up. You must shoot all the potatoes that are floating in space, without smashing into them as you move. While spuds will explode with one shot, flying cakes and potato chips blow up only after several zaps. Watch out for the sun, which shoots green balls at your ship; get hit and you are snuffed out. While not an award-winning game in itself, the combination of the action and SpaceSpuds' intense 3-D imagery is sufficiently novel to hold your interest for a while.

The documentation (one double-sided page) very briefly discusses the X-Spec glasses and software. Information about creating your own 3-D stereo images is sketchy at best. While it describes a method of using the supplied picture ►

BUSINESS
#37 Business Programs—Included are an address book, an amortization program, a talking mail manager, and a label printer
#115 Word Processor—Lots of features
#116 Spreadsheet—VC, a powerful spreadsheet
#117 DBase—Good for business or home use
#135 Quickbase—This is a mail manager DBase
Persmait—A DBase for keeping track of people

UTILITIES/APPLICATIONS
#90 Modem Madness!—Terminals (StarTerm, ATerm, Kermit) and archive utilities
#105 Utilities—An icon maker, disk cataloguer, FKey template maker, and PopCli2—A new cli at the push of a button
#126 ShowPrint—Makes viewing picture files easy.
FuncKey—a function key editor
#129 DPaint Tutor and Hard Disk Backup
#130 JOBS—A more effective system/user interface. Also Floppy Drive Speedup!
#133 Amiga DOS Helper—This makes using CLI so much easier! Works from its own menu
#134 Applications—Label maker/printer, grocery list maker, and AMIGazer—a star viewing program
#140 Virus Killer!—Everyone needs this! Makes it easy to detect and eliminate the known viruses
#146 Calendar—A great personal calendar with diary

GRAPHICS/SOUND/ANIMATIONS
#1 Norman Rockwell—17 beautiful digitized paintings in a self-running slideshow
#5 DPSlide 1—Put your DPaint or other IFF picture files into a self-running slideshow
#77 Instruments—Turn your keyboard into 25 different musical instruments! Try them all!
#108 Juggler Demo—See the famous ray-tracing animation. Show this one to your friends!
#119 mCAD—A full-featured CAD package
#120 WorkBench Picture—View these great IFF and HAM pictures by "clicking" their icons
#132 Videomaker—Packed with several utilities for desktop video enthusiasts
#136 Graphics—BorderSet useful to you if you are involved in desktop publishing or video
#143 Animations II—10 great "mini movies" with sound
#144 Christmas Animations—10 scenes with exceptional graphics and sound

GAMES
#23 Monopoly—Enjoy great graphics and sound while playing three tough computer opponents
#27 Amoeba Invaders—A better Space Invaders!
#38 Card Games—Crazy Eights and Hi-Low Card. Several arcade games make this a fun disk
#118 Space Games—Missile Command, Asteroids game, and 3-D Triclops—great graphics!
#121 Backgammon—Play against the computer
#122 Solitaire—Two styles with color screens
#123 Cribbage—It's you against the computer!
#125 3-D Othello—Great graphics and play!
#127 Wheel of Fortune—A great computer version for multiple players. It even talks!
#131 PacMan '87—Great sound and graphics. Adds new elements to PacMan. Saves Top 10
#137 Vegas Fun—Play Blackjack or the Slots
#139 Bull Run—Great Civil War strategy board game with impressive graphics and sound
#142 Q-Bert—Like the popular arcade version
#148 Boulder Dash—Has several challenging levels

viewer and any two IFF pictures to display a stereo image, the documentation offers no programming information.

As a gadget lover, I was fascinated by X-Specs, until I grew tired of looking at the few supplied pictures and demos. The documentation does stress that other software will support the glasses, although little is available currently. I hope that future software releases will have information for programmers. Until then, while X-Specs 3-D is a very interesting gadget, it is too expensive for what little you can do with it.

WordPerfect Library

A five-piece set of desktop-utility programs with a designer label to top off your WordPerfect collection.

By Denny Atkin

LIKE CLOTHING DESIGNERS Ralph Lauren and Calvin Klein, WordPerfect is a trend setter when it comes to word processing. And like its counterparts in fashion, WordPerfect is beginning to spin off a whole line of accessories to complement the basic "threads." Think of WordPerfect Library—a set of desktop utilities—as the perfect ensemble of shirt, tie, cuff links, and cologne to go with the $500 sport coat.

WordPerfect Corporation bills WordPerfect Library as the key to getting organized. It consists of five programs: Calculator, Calendar, File Manager, Notebook, and Program Editor (P-Edit).

The question is: Do you really need all the extras? The Amiga system software already includes an editor, calculator, and notepad. Powerful editors, calendar programs, calculators, and directory utilities are available through shareware and the public domain. Can WordPerfect's advertising claim that "at $129, you can't find a better value" be justified?

If you have used WordPerfect on the Amiga, learning to use the Library programs should be easy. While Library takes full advantage of the Intuition user interface, commands are also available through use of the function keys. Where possible, the same key combinations are used for functions that overlap between programs. Complete function lists are available through the Help key in the P-Edit, Notebook, and Calendar programs.

The programs are well integrated. While the clipboard is not used to cut and paste between applications, the programs douse compatible file formats. Calendar, Notebook, and ProgramEditor files can all be read by WordPerfect. Additionally, the package includes the Print program from the WordPerfect word processor, an independent task that allows spooling of multiple files for background printing.

Notebook

Although billed as a "mini-database," Notebook is a surprisingly capable list manager. Geared primarily toward the creation and organization of WordPerfect merge files, Notebook handles only text fields. While it has no math or sophisticated reporting capabilites, the program is ideal for keeping text-oriented databases, such as mailing lists, phone lists, or recipe files.

You can view a Notebook file in two ways. The initial display is a columnar listing that shows selected fields from each record, with one line devoted to each field. From this display you can search for specific records, choose records for printing and merging with WordPerfect files, and sort and delete records.

The record display appears when you edit or add a new record, presenting individual records in a file-card format. This window can contain labels, instructions, lines and boxes, and of course the data fields. All changes to individual records take place in this window.

With Notebook's powerful search function, you can conduct a search on all records in a file or marked records only, and you can search all fields or individual fields in each record.

For modem users, Notebook also includes a sophisticated phone-dialing function. Simply mark a field as a phone

field when setting up the database. You can specify up to 26 special dialing strings, such as area codes, long distance services, or dial-out codes within the setup file. These can be applied to specific records or to the entire file, allowing you to dial a special access code only if the phone number is long distance. Calling is then as simple as clicking on a record and selecting Dial.

Like WordPerfect, Notebook has powerful macro capabilities for automating repetitive tasks. Macros can contain keystrokes and menu selections, and can call other macros.

Notebook saves its files directly in WordPerfect merge format, so records can be merged easily with WordPerfect documents. You can mark specific records for saving in a separate merge file. If you use WordPerfect for mail-merge operations, Notebook is a must.

Program Editor

Designed for editing text and program files, P-Edit has sophisticated block commands and macro capabilities similar to those available in WordPerfect. P-Edit's features are geared toward creating structured documents, such as program source code. Along with such standard block functions as cut, copy, and paste, P-Edit features some useful new commands, including CLONE, a combination of copy and paste, and MOVE, which combines cut and paste into a single function. These functions allow a programmer to easily duplicate or move blocks of code within a program.

Text blocks can be defined using either mouse or keyboard commands. A unique feature of P-Edit is the ability to highlight several pieces of text as blocks simultaneously. This is handy for copying multiple sections of one file to another without having to block and copy each part separately. Like WordPerfect, P-Edit allows you to have up to 32 files open concurrently.

There are many other programmer-oriented features, including hex edit, which allows editing of non-ASCII characters such as control codes; auto-indent for use with structured languages such as C and Modula-2; and case convert, which allows you to convert blocks of text to all uppercase or lowercase letters.

One major weakness in P-Edit, however, is the lack of a word-wrap option. If you edit text files for uploading to bulletin board services, word-wrap is a very useful feature.

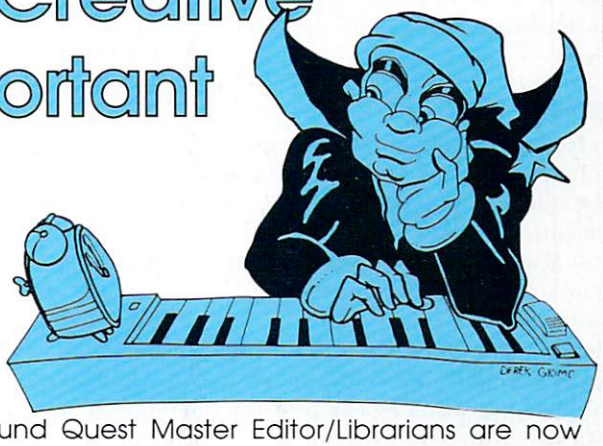
File Manager

File Manager allows users to manipulate files without using the CLI. Similar in concept to many public-domain directory-utility programs, File Manager has some unique features that make it stand out for WordPerfect users.

The program displays files sorted by name, date, or size. Device names can be displayed either by physical name (df0:, RAM:) or logical name (Workbench1.3:, c:). You can move through the file display using the scroll bar or cursor keys, or by typing the first few letters of the file you are looking for. Typing PRE, for instance, would find Preferences).

Deleting, copying, or moving files and directories is as simple as highlighting the files in question, clicking on the desired operation, and selecting a destination directory. Unlike many directory ►

When Your Time To Be Creative Is Important



Consider this. Sound Quest Master Editor/Librarians are now available for both the PC and the AMIGA

The Master's "Musician Friendly" editor/librarians are used to store, retrieve, modify, and create sounds to be used in particular synthesizers.

Features include: global editing of combinations of similar parameters, simultaneous editing of multiple synthesizers, Help! screens for each Master window, ability to generate patch variations or random voices, 3 ways to mix voices, and eight specific bank editing functions.

ELECTRONIC MUSICIAN says "These are all intelligent, great looking, feature packed and easy to use editors..."

For more information contact:

Sound Quest Inc.
5 Glenaden Ave. E.
Toronto, Canada
(416) 234-0347

ALSO, ASK ABOUT THE QUEST SEQUENCER STAGE 1: TEXTURE

utilities, File Manager will automatically create the destination directory you specify if it does not already exist.

File Manager allows you to search for a file or group of files by file name or by using a wildcard pattern. You can also mark files created between specific dates, or containing a certain text string.

While File Manager has some unique features, it lacks many of the extras available in other directory utilities. The program's primary advantage is its capability to print both ASCII text files and formatted WordPerfect files. There is no way to run a file from within the program, and you can copy or delete only one directory at a time. Considering the sophistication of the other programs in the package, I would have expected File Manager to be more powerful than the public-domain and shareware directory utilities.

Calendar

Calendar is a time-organizer program that allows you to view a monthly calendar for any date, and to add memos, appointments, and to-do lists for specific dates. It also includes a separate alarm program to notify you of impending appointments.

Calendar opens four windows on your Workbench screen: Calendar, Appointments, Memo, and To-Do. The first window displays a graphics-oriented calendar for the currently selected month. The appointment window not only lets you set alarms notifying you of upcoming meetings, but also alerts you if appointments overlap.

Other Calendar options allow you to carry To-Do items over to the next day if they are not marked as completed, and to remove old information and append it to a separate archive file. A Day Count feature will calculate not only all days between two dates, but any combination of days of the week between two dates.

Alarm is a separate 7K program that will pop up and display appointment text a set amount of time before the appointment. If you wish, the program can also speak the appointment text and alert you with a buzz or any IFF-sampled sound. Alarm also has the option to display the current time in a small title-bar window.

Calculator

The final Library program, Calculator, emulates a scientific, programmer, or financial calculator. Calculator will operate in either algebraic or Reverse Polish Notation (RPN).

The program displays a large window that looks much like a hand-held calculator. The program accepts input either through the keyboard or by clicking on the graphics-oriented "keys."

Calculator has all of the standard operators associated with each calculator type. The most exceptional feature of the program is a 100-register memory that can be saved when you exit the program. The Financial calculator also provides registers for commonly used variables, such as interest rate, profit margin, and present value.

Unfortunately, Calculator is the only program in Library that does not have printing capability. When using the program to calculate a long list of numbers, it would be nice to have a "rolling-tape" capability so you could check your input.

Like WordPerfect, Library comes with a very complete manual, function-key overlays for the various programs, and transparent keytops for the A1000 keypad. Bound in an attractive three-ring binder with matching sleeve, the documentation is over 600 pages in length. There are learning and reference sections for each program, and comprehensive installation instructions. The Learning sections provide tutorials and practical examples, while the Reference sections contain alphabetized listings and descriptions of each program command.

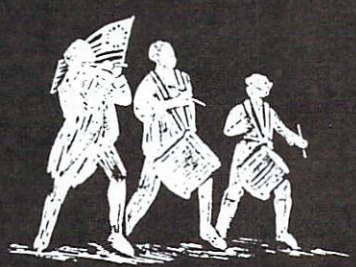
If you have a problem not covered in the documentation, WordPerfect maintains a toll-free telephone support line. If you report a bug that has been fixed, you are entitled to a free upgrade to the latest-release version. Overall, WordPerfect Corporation provides excellent support.

How should we answer the question "Can you find a better value at $129?" posed at the beginning of the review? Library's strongest components are Note- ►

Amiga Users Unite!

This year Amiga users like you came together on GEnie™ to get their Amiga questions answered by experts, their Amiga games won, their Amiga systems updated and their online Amiga opinions confirmed, researched, and applauded

503,401 times.



Join the Revolution.

GEnie™

For the people, by the people.

You've never been a follower. You want your voice heard. You want straight, unbiased information about your hardware and software. You want independent news. Opinions. And control.

GEnie understands. In the Amiga RoundTable on GEnie, the people determine what is discussed. And since GEnie is not a hardware or software developer, you'll get the most objective information about what's new on the market. That's why smart Amiga users like yourself turned to us over 500,000 times this year. That's why you should too.

GEnie makes sure you have access to all kinds of great Amiga software–including thousands of games, education and business productivity programs as well as hard-working utilities to expand your Amiga. And the experts you trust will be online when you log on. Plus news, shopping, travel and reference data. All for only 8¢ a minute.

Sign-up is just $29.95, and your first 2 hours are free.* There are no hidden charges or monthly minimums. Now it's your call.

Here's how easy it is to sign-up from your keyboard now.

1. Have your major credit card or checking account number ready.
2. Set your modem for local echo (half-duplex)–300 or 1200 baud.
3. Dial 1-800-638-8369. When connected, enter HHH
4. At the U#=prompt enter **XJM11737,GEnie** then RETURN.

Need help or more information? No modem yet? We can help. In the U.S. or Canada call 1-800-638-9636. Join the online Revolution and let your voice be heard.

We bring good things to life.

*Basic rates and services in effect 9/88 apply in U.S. only. Non-prime time rates apply Mon.-Fri. 6PM-8AM local time and all day Sat., Sun., and nat'l. holidays. Subject to service availability. Some services offered on GEnie may include additional charges.
*$10 credit applies. Offer good for 30 days from sign-up.

book and P-Edit and they deliver on most everything they promise. Much of the functionality of the other programs, however, can be found in public-domain and shareware programs. With many calculators and directory utilities available free from public-domain sources, this part of the package does not represent great value.

Yet, despite a few weak areas, I would still recommend Library to anyone who needs a good program editor or does a lot of mail-merge work in WordPerfect. While the other programs in the package are not outstanding, they are well thought out and easy to use, and WordPerfect Corporation has expressed plans to continue to develop and upgrade the programs in the future.

While $129 may not seem an exceptional value at first, WordPerfect products generally sell at a healthy discount, and the street price of the program should be under $100. Considering that works out to less than $20 a program, I would rate Library a good value.

Ultra DOS Utilities, Module 1 DiskMaster

Back up and rearrange to your disk's content.

By C. W. Mann

WITH ULTRA DOS Utilities Module 1 and DiskMaster, you can mass-copy files among mounted Amiga logical devices and volumes, including hard drives and CD-ROMs. Both allow you to preview certain types of files, rename files, create directories, and perform several other standard AmigaDOS functions using the mouse instead of typed commands. Before you start backing up your chock-full 80-meg hard disk, be warned that both utilities use a file-by-file system rather tha data compression techniques. They are significantly slower and bulkier than dedicated hard-disk backup programs.

Ultra DOS Utilities Module 1

The simpler of the two programs, Ultra DOS closely follows the lead of the popular public-domain program DirUtil, offering graphic display of files and directories, copy, delete, and create functions for files and directories, plus easy transportation up and down the disk or devices' file tree. Ultra DOS goes a step further by letting you enter file names with wildcards and mark batches of files for fast copying and deletion. Two directory windows display the contents of both the source and directory disks at the same time. An optional window shows statistics such as file size (in bytes and blocks), creation date, and which protection bits are set. You also can add or edit file comment lines. An adjustable file-copy buffer enables you to shorten disk access time if your system has a little extra memory. For traditional commands, the Exit To DOS gadget sends you to the CLI.

If you are new to file maintenance operations, Ultra DOS Utilities is an excellent program. Unfortunately, it is unstable in close quarters. Maybe it was an unexpected stack size requirement that prompted the Guru Meditation error when I multitasked Ultra DOS Utilities, DiskMaster, and Amiga WordPerfect 4.1.

The manual is written as a beginner's tutorial on the AmigaDOS functions that the program automates. Though thorough and concise, the manual lacks one important feature: the address and telephone number of Free Spirit Software. Don't lose the box.

Although Ultra DOS Utilities Module 1 claims to be a full-featured hard-disk back-up utility, it is simply a beginner's file and directory manager, like DirUtil. Unlike dedicated hard-disk back-up programs, Ultra DOS makes no visible pro- ►

HIGHER PERFORMANCE...AND CHEAPER TO BOOT!

Prices and availability subject to change without notice.

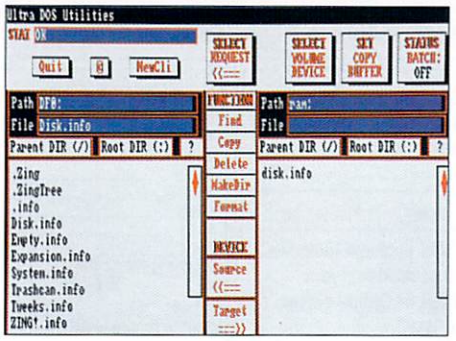
vision for file selection by wildcard or creation date. It saves transferred files in strict AmigaDOS format, rather than using the file-compression routines of the heavy-duty back-up utilities.

DISKMASTER

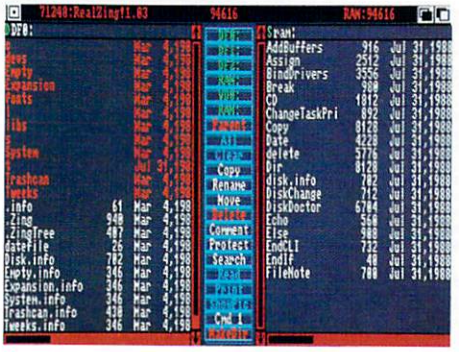
DiskMaster by Progressive Peripherals and Software is a more polished and refined version of the DirUtil theme. You access the features through two pull-down menus and the central column of selection gadgets. Keyboard equivalents, however, would be a helpful addition. Though a nice command shortcut idea, DiskMaster's six programmable (and saveable) Hot Key gadgets would not work for me. The maximum command string length, eight characters, is too short to program useful operations.

You can customize the screen in several ways. DiskMaster offers two interlaced and one low-resolution mode for full-screen display, plus a half-screen interlaced display for multitasking. The color palette selector gives you complete screen color control. For text, you can use Topaz-80 or a narrow 132-column font.

DiskMaster sports numerous advanced features. The programmable functions



Ultra DOS Module 1 is simple.



DiskMaster puts you in control.

DiskMaster's documentation, a large reference card, assumes you understand AmigaDOS, but want to use the mouse let you bend the program to match your learning curve and taste. You can rename any or all device selection gadgets and use wildcards for selecting files. Although you must supply a copy of ARC yourself, DiskMaster lets you automate the file preparation process, a big help for heavy modem users. The program displays IFF graphics and ASCII files and plays digitized sound files at a click of the mouse. The Info Copy feature copies icons automatically along with the actual data file. DiskMaster's smooth-scrolling ASCII-file reader was a delight to use. It displays ASCII and WordPerfect files cleanly, even the control codes.

One deviation from the standard disk-handling theme was unwelcome. Unlike Ultra DOS and the AmigaDOS Format command, DiskMaster's format routine produces a totally blank disk, lacking the standard disk.info file, Trashcan.info file, and Trashcan directory. While this leaves the maximum space on the floppy, I would rather have the standard features on freshly formatted disks.

WHISTLE UP A HAPPY 'TOON...

WITH

EASYL™

PRESSURE SENSITIVE DRAWING TABLETS FOR AMIGA AND IBM PC

Since its' appearance in 1984, the Easyl pressure sensitive drawing tablet has been the tool of choice for thousands of artists, animators, designers, map makers, students, teachers, and hobbyists. Easyl works with popular programs such as Deluxe Paint II, Photon Paint, Deluxe PhotoLab, and Draw Plus. Easyl offers the best combination of ruggedness, simplicity and economy for art, design and touch input. Easyl models are available for Amiga 500, 1000, and 2000, and IBM and compatible personal computers. If you aren't an Easyl owner yet, contact your local Amiga dealer for a demonstration, or Anakin for further information.

EASYL-THE HUMAN TOUCH.

GAME SHORTIES

Death Sword

By Lou Wallace

IF YOU LIKE electronic gore, you will be suitably impressed with Death Sword, a one- or two-person battle game featuring a pair of Conan The Barbarian look-alikes.

The object is to rescue a princess kidnapped by the evil Drax. To get to her you must fight a series of warriors, using your sword or body to strike at your opponents. Each one can withstand only so many blows, eventually collapsing and dying. As you defeat each warrior, you proceed to the next-most-difficult of ten different battles, finally encountering Drax himself. If you can beat him you win; if not you die.

Dying is very much the name of the game. This is violent, hand-to-hand combat between two humanoids. They strike deadly blows—even chop off each other's heads.

Controlled by a joystick, Death Sword has over a dozen different fighting and defensive moves. The warriors are large, detailed animations; consequently, with a little practice you can become proficient at the art of fighting like a barbarian.

Brandish your sword and fight to the death.

Digitized sounds make the game more realistic and enjoyable: Swords clang as they strike each other, warriors yell while fighting and cry out when injured. If you chop off a head, it bounces with a disgusting, squishy thud.

Backgrounds for battles include a forest, lava pit, dungeon, or throne room. Battles in one-player mode are always to

the death, while in two-player mode they are restricted to a certain time period. Although the opponent for each successive level has a different style of fighting—as well as increasing skill—I found that the same fighting technique was effective most of the time. Just keep rolling and knock over your opponent—with an occasional well-placed kick or chop thrown in—and you should be able to win. On certain levels, however, it does seem easier to behead the enemy than on others (a 5000-point bonus is added to your score each time you cause a head to roll).

One problem I have with Death Sword is that you can too quickly learn to reach the higher levels; this is not the type of game that will hold your interest for a long time.

A different kind of problem for some people may be the graphic realism of the violence. When you behead someone blood spurts as the body collapses, and the triumphant gladiator always gives one last kick to the defeated opponent. Bodies are carried away by a little green ghoul. Parents may decide this is not the kind of game small children should be allowed to play.

I do have to admit, however, I had fun playing the game. The gladiators are easy to control and the animation is impressive. Death Sword is a good action game: It does what it was designed to do, and it does it well. *($24.95, Epyx, 600 Galveston Dr., Redwood City, CA 94063, 415/366-0606, joystick and 512K required.)*

—Louis Wallace

PORTS OF CALL

SHIPPING WORK IS is a continuous strategy session. You must match loads to equipment, and equipment to personnel. Loads change, prices change, accidents occur, and all sorts of uncontrollable events disrupt your strategy. Make it succeed, and the satisfaction is enormous. Fail, and your job—maybe even your company—is suddenly on the line.

In Ports of Call, you assume the role of a "tramp ship" owner. Tramp ships, the manual explains, compete for freight not handled by vessels registered to the countries involved. With five million dollars, you buy your first rig (or two) and start operations by chartering a load of freight. Delivery rates depend on competition, freight value, traveling distance, and a sizable random element representing the world beyond your control. If you deliver the freight safely, you get paid.

Income can be high (you can earn over two million dollars in a single trip), but expenses are high as well. Fueling a ship can cost $200,000; repairs and maintenance can cost more than that. Tugs will charge as much as $10,000 to help you dock, and the same to tow you out. You must also consider canal charges (Suez costs $70,000 one way), and if you mortgage ships or extend your credit, monthly costs will mount. Also, cargo can be stolen, rats and disease can strike, your office can be robbed, and you can collide with reefs or with other ships.

Up to four people can play Ports of Call. Each ship owner has an office, and all can can visit the Ship Broker, where ships are bought and sold, at any time.

The main screen is the World Simulation Display—a stunning, flat projection map of the world, on which all ships are displayed. Here, a calendar tracks passing time; the game proceeds in increments of one day. As events take place, the World Simulation gives way to other displays. Each time a ship enters or exits port, the Tug screen appears. Once in port, the Port screen appears. Refueling brings up a separate screen, as does repairing, and at sea, mini-arcade games and occasional other displays demand the screen as well. The displays are graphically excellent, and many have very good sound effects, but each requires disk access. With four players, the game can become extremely lengthy.

The only other negative is the arcade element. Ports of Call is so well designed as a shipping simulation that the exercises for steering through reefs, rescuing life rafts, and avoiding collision seem counter-productive; they quickly become tedious. If there were a way to toggle the arcade elements on and off, the game would improve significantly. Also, a simple selection menu to control port access, refuelling, and repairing could replace the respective full-screen displays. An otherwise first-rate game, Ports of Call is strategically addictive. *(Ports of Call, Aegis Development, 2210 Wilshire Blvd., Suite 576, Santa Monica, CA 90403, 213/392-9972, $49.95, one megabyte required.)*

—Neil Randall ■

PROGRAMMING AND MATHEMATICS MADE EASY
BY JOHN KEMENY AND TOM KURTZ

The True BASIC Language System

You don't have to be a programmer to use True BASIC. You can be designing simple programs in no time at all. That's what BASIC means, and always has meant.

True BASIC is a structured language that's easy to use. A compiler, editor and debugging tools rolled into one, True BASIC gives you speed, great graphics and power that lets you get the most from your Amiga. Our optional toolkits allow the more knowledgeable programmer unlimited extensions. . . Use the 3-D graphics toolkit to add depth in a picture; Or, the Developer's Toolkit to launch sprites and bobs, add pull-down menus, and get at all the intuition and Kernal features. Soon you'll want to build your own external toolkits!

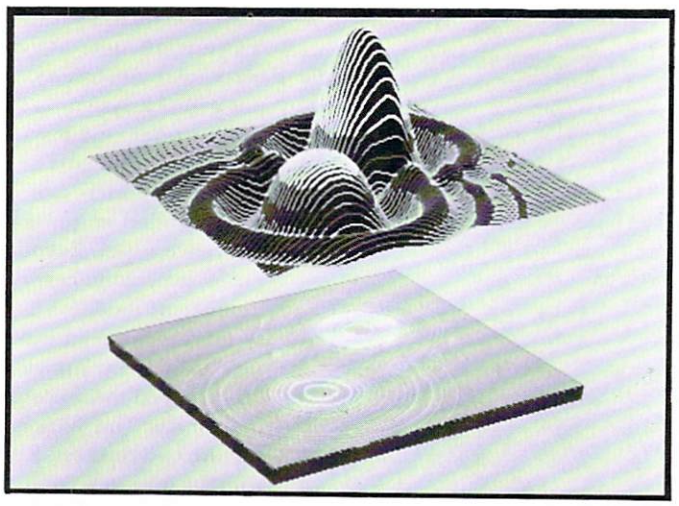
Find out why True BASIC is the *BASIC of choice* for thousands of students, and developers.

Visit your Amiga dealer or call 1-800-TR-BASIC.

Programming Language with Runtime $99.95

Optional Toolkits $69.95 each

Back in 1964, Drs. John G. Kemeny and Thomas E. Kurtz created BASIC, the most popular computer language in the world. Their latest creation is True BASIC, an amazing version of BASIC that is powerful yet easy to use. In addition, Drs. Kemeny and Kurtz pioneered the use of computers in mathematics education, and have received numerous awards for their work. They developed the Kemeny/Kurtz Math Series, a full range of stand-alone software applications for high school and college-level mathematics.



The Kemeny/Kurtz Math Series

The Kemeny/Kurtz Math Series is software that knows mathematics. It's designed by experienced teachers, class-tested, and used in hundreds of high schools and universities. These best-selling math packages help you organize your thoughts, understand key concepts, step through examples, and *solve* real problems. You can actually see the steps to the right answers—graphically.

The Math Series provides a full range of stand-alone (does not require the True BASIC language) packages for secondary school and college-level mathematics. Choose from Arithmetic, Algebra I, Algebra II, Pre-Calculus, Trigonometry, Calculus, Discrete Math, Probability, and Statistics. Each package lists for $49.95.

Let the Kemeny/Kurtz Series lead you to real insight and understanding of mathematics.

WHAT'S NEW?

Better hang an extra-large stocking on the mantle this year if you expect Santa to deliver all these goodies.

Compiled by Barbara Gefvert

FOLLOW ME

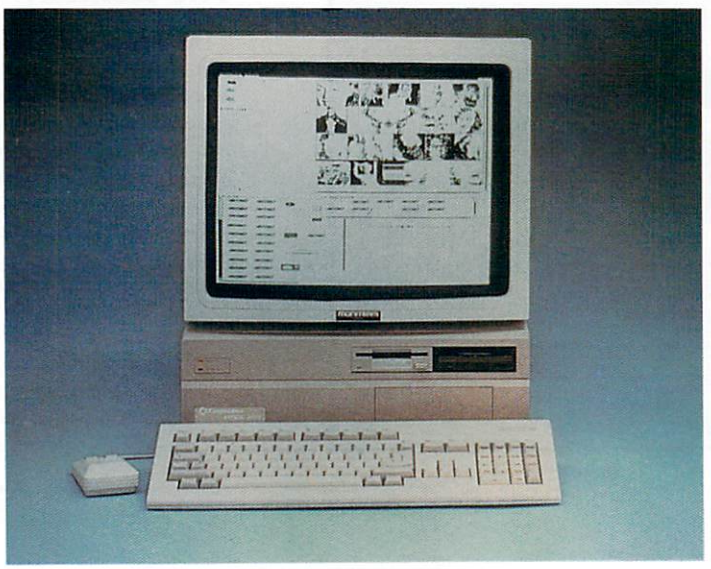
WANT TO DESIGN your own peripherals? You need a prototyping card!

The **AM-200A Prototyping Board** for the Amiga 2000 provides both Zorro-2 and IBM-AT card edge connectors with gold-plated fingers. Also included are a hole pattern for D-pin connectors and two 13 × 13 pin grid arrays. This board is $49.95 from NES, 6805 S.W. 8th Ave., Portland, OR 97219, 503/246-9311.

If you want to build expansion devices but don't have extensive system knowledge, check out the **A2000 Auto-Config Proto Card**. Because the Proto Card contains auto-configuration logic, prototypes install into the system automatically. You can determine board characteristics such as the number of wait states, address space up to two megs, free memory pool linkage, and interface buffer direction control for on-board DMA controllers. Patterns for headers and various D shell connectors are included, and the system bus is fully buffered. The complete package is $139.95, but you can get the Proto Card without auto-config logic for $59.95. Contact Interactive Video Systems at 15201 Santa Gertrudes Ave., Suite Y102, La Mirada, CA 90638, 714/994-4443.

DO YOU SEE WHAT I SEE?

FOR THE MOST demanding tasks, only a large-screen, non-interlaced, high-resolution monitor will truly complement your Amiga 2000. The **Viking 1** is such a monitor. The 19.6-inch screen offers four intensity levels for gray-scale use, and a resolution of 1008 × 800 pixels. Viking 1's display supports lo-res modes at a 63 Hz refresh rate. The monitor results from a joint effort by Commodore and Moniterm Corporation, and sells for $1995. For further details, contact Moniterm at 5740 Green Circle Dr., Minnetonka, MN 55343, 612/935-4151, or Commodore at 1200 Wilson Dr., West Chester, PA 19380, 215/431-9100.



Set your sights on the 19-inch hi-res Viking 1.

VIDEO DIRECT

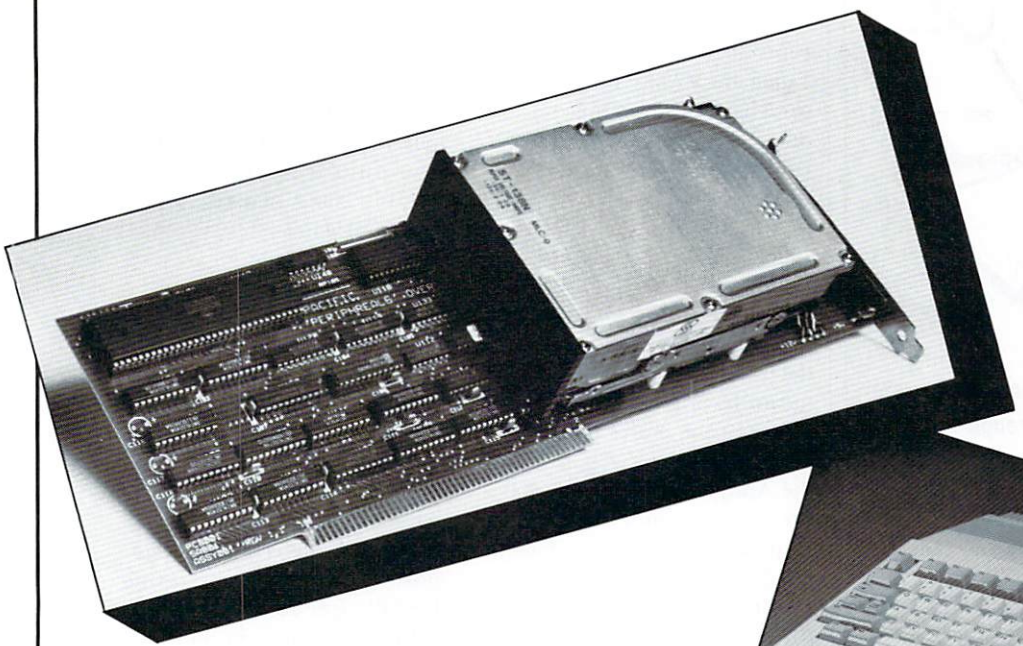
CAN YOU GET broadcast-quality video direct from Amiga graphics? Magni Systems answers "Yes!" with their **4004** (NTSC version) and **4005** (PAL) Video Graphics Systems. The Magni 4000 series systems consist of twin Zorro-2 cards. The genlock/encoder card combines the usual two-step graphics-conversion process into one; it contains sync and blackburst generators, an input genlock system, a broadcast encoder, and a system clock for graphics. The genlock function lets you synchronize encoded graphics with a reference input. Encoder output is switchable between a number of modes. The Magni systems include an interface card to pick up Amiga graphics and feed locking signals to the Amiga. The 4004 is $1695 for the two-card set; $1995 with an optional control box; 4005 prices are $1865 and $2165, respectively. For more information, call Magni at 9500 S.W. Gemini Dr., Beaverton, OR, 97005, 503/626-6225, 800/237-5964.

TAKE COVER

DON'T LIVE IN fear of damaging your Amiga by spilling something on your keyboard—put a lid on it! **SafeSkin** is a molded keyboard cover designed to remain in place at all times. The clear, non-glare, flexible polymer is contoured so that adjacent keys are unaffected by typing. Now available for the A1000 keypad, SafeSkin is $29.95. Run for safety to Merritt Computer Products, 4561 S. Westmoreland, Dallas, TX 75234, 214/339-0753. ►

THE *BEST* SOLUTION...

(is also the least expensive)



Call now to order!

(415) 651-1905

Dealer inquiries welcome.

OverDrive™

is the first "hardcard" design DMA SCSI hard drive controller for the A2000.

Mount a 3.5" SCSI drive to the OverDrive and save your drive bays for other uses...like the Konica 10 megabyte floppy drive. (See below.)

- The OverDrive uses a two-channel Motorola 68440 direct memory access chip to guarantee exceptional speed and compatibility with the Amiga's Motorola 68000 microprocessor.
- The OverDrive is autoconfig and compatible with Workbench 1.3 and 1.4, Fast File System and autobooting.
- A total of 7 devices can be added in various internal or external configurations.

With all of the above, you get the easiest to use software on the market. It is completely mouse driven, making the formatting process almost automatic.

Pacific Peripherals offers Seagate 30, 50 and 62 megabyte drives as well as the Konica 10 megabyte floppy. The Konica drive operates as a 75ms hard drive using high density (480 TPI) floppy disks giving you the speed of a hard drive and the unlimited capacity of a floppy drive. Exceptional error correction capabilities make your data safer than it would be on a standard 5¼" disk.

OverDrive only	$249.00
OverDrive with:	
30 MB DRIVE	
50 MB DRIVE	
62 MB DRIVE	*
KONICA	*

*uses 5¼" drive bay

SubSystem 500™

is a two-slot expansion chassis for the A500 that uses cards designed for the A2000.

An optional 3.5" floppy drive may be added as an "external" drive but is, in fact, more convenient than any drive available for the A500 (including the A500 internal drive). The 100-pin "Zorro II" A2000 expansion cards are less expensive, more uniform in design and more available than pure A500 peripherals. (For example, try to find a DMA controller designed specifically for the A500. How about an A500 Bridgecard?) Rather than take power from the A500 power supply, the SubSystem comes standard with a 54-watt power supply.

SubSystem 500	$249.00
SubSystem 500/drive	$399.00

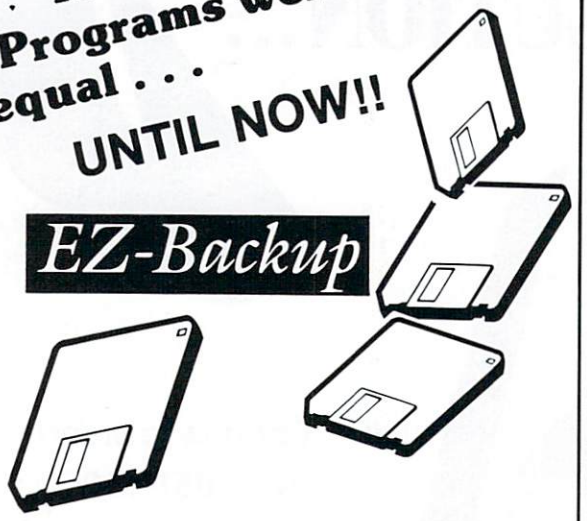
BREAKTHROUGH

All Hard Drive Back-Up Programs were created equal . . . UNTIL NOW!!

EZ-Backup



100% better than any other hard drive back-up program
EZ-Backup is a genuine breakthrough

EZ-Backup actually manages the space on your backup disks--

Before EZ-Backup the only way to get rid of the piles of incremental back-up disks that littered your desk was to do another full back up. This method is inconvenient and requires a whole new set of unformatted floppy disks.

With EZ-Backup you use the same set of disks for every incremental back-up. Only one full back-up required--Ever! Space on the disks is managed by deleting obsolete archive files and allowing you to save from 0-255 versions of each file. **Your files are saved--even if you have completely deleted them from the hard drive!**

EZ-Backup comes with an optional warning screen--
We all tend to put off doing backups. EZ-Backup's warning screen reminds you. If you would rather not be reminded--you have the option to shut the warning screen off.

EZ-Backup prevents you from damaging valuable data--
By checking the volume label, EZ-Backup keeps you from writing over important files.

EZ-Backup uses Standard Amiga format--
Files are archived in standard Amiga format and work with all standard utilities.

EZ-Backup provides easy recovery of individual files--
A simple to use mouse-oriented program allows you to recover individual files.

Works with all Amiga-DOS compatible hard drives.
(Amiga-DOS version 1.2 or higher)

- ★ Provides archive-bit utilities
- ★ Multi-tasking
- ★ Upgrades provided free for the first six months after program purchase!
- ★ Free telephone support!
- ★ Not copy protected

EZ SOFT

Dealing Cards

HAND YOUR AMIGA 500 or 2000 up to four megabytes of RAM. A 100-pin board, the **RC4 RAMcard** fits into an A2000 expansion slot, or, with a little help from the **RC4-AD** adapter box, hooks onto the A500 bus. The RC4 card accepts 32 standard-size DIP 1-megabit RAM chips configured as 256K by 4 bits; another version accepts DIP DRAMS, one megabit by one, in two- or four-megabyte configurations. Custom refresh circuitry reduces power consumption and eliminates CPU and refresh contention. The adapter chassis comes with its own power supply, and powers on and off with the computer. Digitronics sells the unpopulated RAMcard for $225, and the card-and-chassis combo for $325. Prefer to build your own? The RC4 board is available in kit form for $100. Get your cards from Digitronics, PO Box 206, Villanova, PA 19085, 215/459-4493.

Smooth Drive

TRADITIONALLY, A media defect in your hard disk meant having to partition and reformat the entire drive. The **SSD Hard Drive System** for the Amiga 500 breaks tradition. If you bump or drop your SSD and a media defect results, the driver software automatically replaces the corrupted block with one from a reserved portion of the disk. This hard-disk system is comprised of a SCSI host adapter with auto-boot circuitry and a chassis that provides physical mounting for your monitor and two SCSI devices. The chassis can hold one 5¼-inch and one 3½-inch device, and contains two DB-25 female connectors. An intelligent SCSI controller chip handles most drive operations, leaving the CPU free for other tasks. Get relief from reformatting from Comspec Communications, 153 Bridgeland Ave., Unit 5, Toronto, Ont., Canada M6A 2Y6, 416/785-3553.

Run Faster, Jump Higher

ON YOUR MARK, get set, go! Computer System Associates' (CSA) **FastPac** systems promise to run most standard Amiga software faster. CSA has incorporated Commodore's latest operating system in fast EPROM on the CSA 14-MHz 32-bit Static RAM board. FastPac technology is available in various configurations, from a $295 upgrade for those who already own CSA products, to a $2495 system including CPU board, SRAM board, and various RAM/ROM combinations to 1.75 megs.

Now you can take advantage of CSA's processor boards without the high cost of 32-bit RAM. Fully loaded, **DragStrip** makes use of three independent Zorro-2 boards, yet it uses only one slot in your A2000. It's designed to hold two Commodore (two to eight meg) 16-bit DRAM boards that combine to create up to 16 megabytes of 32-bit DRAM. At $795, DragStrip includes Kickstart in ROM running at 14 MHz, as well as autoboot capability with Commodore's 2090A hard-drive controller. Call or run to CSA, 7564 Trade Street, San Diego, CA 92121, 619/566-3911.

Circle 299 on Reader Service card.

HARDWARE COLLECTIBLES

IF YOU NEED hardware, you should know about M.A.S.T.'s (Memory And Storage Technology) Matchbox Collection of peripherals. Whether you want one extra floppy drive or two, M.A.S.T. can help with **Unidrive** ($169) and **Twindrive** ($299). Both units are compact (Unidrive is 1⅛ inches high, Twindrive is twice that), and are covered by a one-year warranty. Special circuitry minimizes power to the units when they are not in use, and you can power them via the Amiga or an external power pack.

Don't forget extra memory for your A500! You can pack up to two megabytes of RAM into the auto-configuring **Minimegs 500**. The unit features low-power CMOS design and a RAM tachometer. **Minimegs 2000** fits into the 86-pin slot on your A2000. The card auto-configures and holds up to one meg. You can populate either device in ½-meg increments. Unpopulated, Minimegs 500 sells for $199, and the A2000 version sells for $179.

Whomper Plus, the hardware virus deterrent, protects df0: in your A500 or A1000, and both df0: and df1: in your A2000. The included Life Support Console has switch controls for various write-protect functions, while the Internal Plug Connector allows partial or total write-protection of internal drives and prevents writing to the boot block during warm and cold boots. Whomper Plus is $69.95; **Whomper Out**, the virus deterrent for your external drive, is $39.95.

Make your Amiga roar with **Tiny Tiger**, a SCSI interface and drive unit in a single case. Tiny Tiger's cable attaches to your parallel port and allows pass through. An external power supply drives the unit, and a standard 25-pin connector on the rear of the case lets you plug in additional SCSI devices. The interface, drive case, and power-source package sells for $249. Complete with a 20-meg drive it's $699; you can also get it in other configurations up to 180 megabytes ($1664).

A SCSI interface of a different sort, the **X-1000** plugs onto the bus of your A1000. The six-layer board gives you DMA for $349.

Kick Booter ($169) lets you boot your Amiga from a variety of external devices including hard drives, RAM disk, parallel-port attachments, and—via serial channel—even an external drive connected with another Amiga. Kick Booter plugs into your 68000 socket; it provides a math coprocessor socket and eight kilobytes of CMOS battery-backed RAM.

Does your SCSI controller have a capacity for four megabytes of RAM? Does it provide for synchronous as well as asynchronous transfer? **Lightning Five** does. Lightning Five promises to transfer data at up to four megs per second, and it is designed to operate with the M2611S. The unit sells for $395, without RAM.

You can start your Matchbox collection by calling M.A.S.T., 7631 E. Greenway Rd., Scottsdale, AZ 85260, 602/483-6359. ■

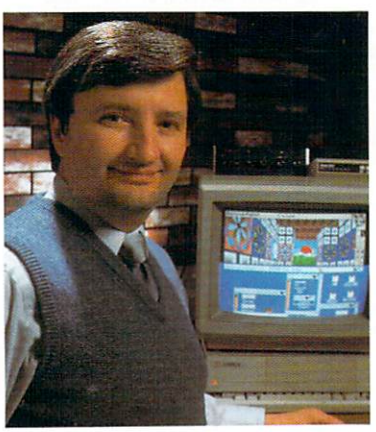
Plus dozens of additional subjects to tap the full potential of your Amiga computer.



Author Rob Peck is one of the most respected and knowledgeable leaders in the Amiga community. While with Commodore-Amiga, Rob wrote the ROM Kernel Manual, the bible of Amiga Developers. Rob is also the author of Programmers Guide to the Amiga and numerous magazine articles, including "Reaching the Notes: Easy Access to Amiga Audio" in the July/August 1987 issue of AmigaWorld.

Best of all, you don't have to be a technical expert to put The Amiga Companion to work for you. The moment you open this help-filled book, you'll get more out of your Amiga than ever before! And as your skills develop, you'll find plenty of advanced ideas and information to make The Amiga Companion the most valuable peripheral you own.

Order Now! Use the coupon below to get your copy of The Amiga Companion, or call 1-603-924-4061 with your Visa, American Express or MasterCard during regular business hours. Your copy of The Amiga Companion will be rushed to you. Order Today!

Special Offer to Readers of AmigaWorld!

Just $19.95! The Amiga Companion is not available in bookstores. This valuable book is available exclusively to AmigaWorld readers. Order your copy today! Call 1-603-924-4061, 9AM–5PM, Mon.–Fri., Eastern time, or mail this coupon.

Mail this coupon to:
The Amiga Companion, IDG Communications/Peterborough, 80 Elm St., Peterborough, NH 03458. Or call 1-603-924-4061 for credit card order.

*Foreign Orders: All payments US funds drawn on US bank. Canada and Mexico $19.95 + $2.00 SHIPPING & HANDLING. Foreign $19.95 + $2.00 SHIPPING & HANDLING. Domestic orders allow 2-4 weeks delivery.

HELP KEY

He's making a listing and checking it twice,

so your Amiga is not naughty but nice.

By Louis R. Wallace

KEYED UP

Q: *IN MY AMIGA Basic program, I want the user to have the choice of using the keyboard or the mouse and menus to control the program. I would prefer to use the function keys, but so far I haven't been able to find out how to do this from Amiga Basic. Is it possible?*

J. McGover
Youngstown, OH

A: Assigning special values to the Amiga's function keys from within Amiga Basic is extremely difficult. You can read them quite easily, however, using the values returned by the keyboard when you press a key. Try this short program:

```
Loop:
  A$ = INKEY$
  IF A$ = "" THEN Loop
  PRINT ASC(A$)
  GOTO Loop
```

When you run the program and press a key, you will see a number, the ASCII value of the key you pressed. Press the F1 through F10 keys; you will see the numbers 129 through 138, the ASCII values for the ten function keys. In your program, you can read the keyboard in this way and determine if a function key (or any other key) has been pressed, and react accordingly. If you press CTRL-F1, CTRL-F2 or CTRL-F4 through CTRL-F10, you will get the values 1 and 2 or 4 through 10. CTRL-F3 will give you the same result as pressing CTRL-C, a break.

RGB OR TV

Q: *Is there an interface that allows you to use a composite monitor or TV with an Amiga? If so, is it worth buying or should I just get a "real" monitor?*

C. Conyers
Mt. Laurel, NJ

A: For $49.95, the C-View I, a RGBA-to-composite adapter from C-Ltd (723 E. Skinner, Witchita, KS 67211, 316/267-3807), hooks your Amiga to a composite monitor and gives you a readable color display. If you have a choice, get the RGBA monitor. You owe yourself the full effect of the Amiga's graphics. You owe your eyes as little strain as possible.

TICK TOCK

Q: *I am writing an Amiga Basic program, and need to have a clock on the screen showing the current time. I know the TIME$ function will print the time, but I want updates every second or two. Is there a ROM Kernel or Intuition routine I can call using the LIBRARY command that will work?*

T. Shrinski
Parma, OH

A: Save yourself some work and use the ON TIMER(n) GOSUB routine name command, which tells Amiga Basic to jump to a subroutine that will print the time at regular intervals. This is a form of event trapping; Amiga Basic monitors the computer automatically for the declared event and performs a designated task at that time. The ►

```
ON TIMER(1) GOSUB PrintTime
TIMER ON
' check for CTRL-C to exit the program
ON BREAK GOSUB ExitDemo
BREAK ON
p$ = "The Quick 4096 COLOR Multitasking Amiga"
p$ = p$ + "jumped over the slow blue pc."
p$ = p$ + CHR$(13)
l = LEN(p$)
DIM p$(l)
FOR i = 1 TO l
  p$(i) = MID$(p$,i,1)
NEXT i
CLS
c = 1
Main:
FOR j = 1 TO 20
  FOR i = 1 TO l
    PRINT p$(i);
  NEXT
  c = 3 - c
  COLOR c,0
NEXT
CLS
GOTO Main
ExitDemo:
PRINT
COLOR 3,0
PRINT "Okay, Okay I'm done!"
COLOR 1,0
END

PrintTime:
OldLine = CSRLIN
OldColumn = POS(0)
LOCATE 1,70
COLOR 3,1
PRINT TIME$
COLOR c,0
LOCATE OldLine,OldColumn
RETURN
```

-MAX™ The Build It Yourself Hard Disk System

• No more painful waiting for icons to come up or large programs toload. -MAX- can provide over a 1/2 megabyte/second reading rate with v1.3 FastFile System!
• Supports many 8 and 16 bit controllers, 68000 family CPUs and works with virtually all ST506/412 compatible drives.
• Compatible with most internal and external expansion devices.
• Once constructed, drive configuration is very quick and very easy using of a simple ASC11 text file and utilities provided.
• Typical cost for a 16 Megabyte hard disk system around $400.00. (Based on used Hard Disk of $100)

Features: 1. Configurable for 1 or 2 controllers with 1 or 2 drives/controller. 2. Supports hundreds of megabytes/drive and multiple partitions. 3. Can attach to and pass the 86 pin exp. bus for A500/A1000, or configure for A2000/ZORRO II or ZORRO I 100 pin bus. 4. Supports OMTI, Adaptec, Western Digital and other controllers.

Includes: 1. Manual with illustrations, layouts and schematics, vendor list where parts can be purchased, (as no parts are supplied). 2. Device drivers, example configuration and Mountlist files. 3. Sophisticated hard disk exerciser/formatter/debugger. 4. Utility program with filecheck, diskcheck and archive bit functions. 5. Electronic Horizons' full and incremental backup utility.

To Order:
V3.0 available direct for $169.00. Send Cashiers Check or Money Order, COD (no Credit cards). PA residents add 6% sales tax. Outside USA: Money Order payable in US funds only, add $10.00 S & H. Business hours from 10 am to 9pm EST Mon-Sat. For tech, inquiries, please call between 6pm & 9pm EST Mon - Fri; 10 am & 5 pm Sat.

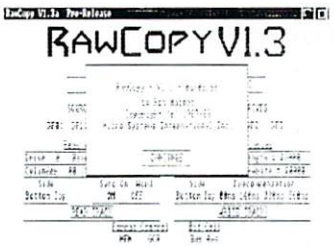
Ultra-powerful backup tool for your Amiga.™

$59.95



RawCopy V1.3 back-up utility is now available. This powerful program will allow for safe, accurate back-up copies for your favorite programs. Protect your software investments. Micro System International's RawCopy V1.3 provides unique options:

- PASSWORD ELIMINATOR
- RAM buffer to reveal hidden data
- ERROR CHECKER

RawCopy V1.3 utilizes 100% assembly programming making it very efficient and ultra-FAST.

RawCopy V1.3 makes use of the Amiga environment enabling it to be user-friendly through mouse-driven menus.

RawCopy V1.3 is designed for the user's future expanded needs. MSI offers, to registered buyers, updates of the back-up utility on a regular basis at minimal cost.

This utility interprets just about every aspect of the Amiga system; from standard DOS to non-standard DOS. RawCopy V1.3 is both a standard and a parameter copier. Finally, you will be able to expand your protection to new software releases without buying a totally new back-up program.

- Copies software that no others will.
- Deprotects many of your favorite programs.
- Supports up to four 3.5" disk drives.
- Mouse-driven user interface.

example program (see box on previous page) monitors two events. It checks for a CTRL-C (a break) to exit the program, and every second it jumps to a subroutine to print the current time. The rest of the time it prints text.

Crash Course

Q: *I understand that some multitasking-related system crashes occur because the Amiga does not protect its memory from being overwritten. If I add a 68851 memory management unit (MMU), will it help prevent system crashes?*

I have been told that the Amiga's Hold-and-Modify (HAM) mode will work in all resolutions, but I have never seen any examples in 640 × 400 mode. Can I get 640 × 400 HAM mode on the current or future video chips?

J. C. Clement
Quebec, Canada

A: With multitasking, one common reason for crashes is that some software does not follow the proper rules for using system resources, including RAM. Sometimes this results in more than one program accessing the same area in RAM, corrupting programs or data. A 68851 will do little good. The Amiga's operating system was not designed for hardware protection of memory, and therefore it will have no direct provisions for using the MMU. Even if Commodore rewrote the operating system to support RAM protection, it would probably slow down the computer to the point that multitasking would work no better on the Amiga than it does on a MS-DOS machine.

The Amiga does not support HAM mode in any of its high-resolution (640 wide) display modes. HAM will work in Interlaced mode (320 × 400) as well as higher resolutions that use the overscan (border) areas of the screen. The Amiga design engineers all agree that HAM will not work in high resolution.

The enhanced chip set can address a full megabyte of RAM for graphics and sound and has programmable horizontal and vertical resolutions. The chips also will support larger blitter RAM moves (8 × 11 bits) than the current chips. The new chips will have a 640 × 400 non-interlaced (four-color) mode that will require a special 31.5 kHz multiscan monitor.

Pass It Along

Q: *According to* The Amiga Basic Manual, *when you use the WINDOW function (not the command syntax) with a parameter of 7 or 8, it returns information about Intuition and Rastports. What good are these functions to Amiga Basic programmers?*

J. LeFon
Quebec, Canada

A: In rudimentary Amiga Basic programming, these functions do not have any use, but they are quite useful if you want to access the functions and commands available through the LIBRARY statement. Many ROM and Intuition routine calls require you to tell them where they can find the structures or information lists that describe the current window or custom screen. The WINDOW( ) function can tell them the address of this information. Without these pointers, many powerful ROM and Intuition routines would be unavailable.

All in One

When instructing the computer to execute Amiga Basic, then load and run a BASIC program, you must enter the command all on one line, not two lines, as shown in "Get Started" (Oct. '88 Help Key). ■

Great Hardware Buys

Flexible Data Systems

FDATA-10 Disk Drive

This external 3.5" Drive is a very inexpensive unit to make the life with your Amiga easier. The FData-10 is compatible with the original Amiga-drive but is quieter, smaller and has a longer cable (27inch) to connect it to the Amiga.
Oh yes, before we forget to tell you,
it's only **$139.50 !**

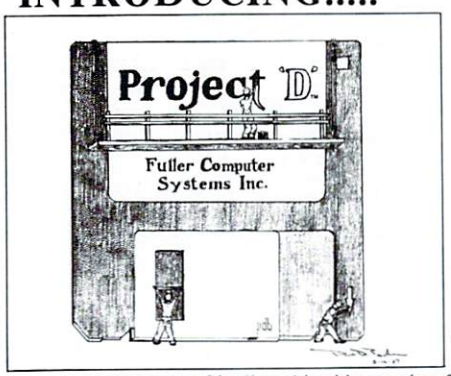
INTRODUCING.....



An Evolution in Disk Utilities for Amiga™ Personal Computers!

FEATURING

- An easy to use, friendly and intuitive user interface.
- A powerful and fast disk backup tool that lets you make backups of your copy-protected Amiga software.
- A disk editing tool that lets you edit raw MFM tracks, AmigaDOS sectors and AmigaDOS files (automatically calculating new checksums).
- A disk cataloging tool that lets you maintain lists of your personal, public domain and commercial software.
- A unique backup tool for duplicating other disk formats including MS-DOS/PC-DOS and Atari ST.
- An easy to read, informative user manual is included.
- This product is not copy-protected in any way.

The Pull-Down Menu

BASIC PROGRAMMERS!

Now there's an easy way to add graphics to your AmigaBasic programs. Design images with the mouse. *Basic Art Coder* automatically writes the code to re-create them, and stores it in the Cut-and-Paste file. Just Paste the code into your own program. When run, it displays your images. *Basic Art Coder* fully automates these commands: AREAFILL, LINE, CIRCLE, COLOR, PAINT, and PALETTE.

Basic Art Coder..... $24.00 postpaid
Picture Garden demo..... $8.00 postpaid

Attention Instrument Pilots

Now, what you have always wanted—**Jet Instrument Trainer.** Professional instrument simulation for Amiga. ILS, VOR & NDB approaches; DME Arcs, complex procedures, on-screen plotter, prop mode, ILS visual approach at minimums, and much more. Easily program and fly any area, worldwide, with your charts and aids. If you're a pilot looking for serious practice, this program was designed for you—absolutely not an arcade game.
$89.95 includes shipping. Check or COD to Precision Approach, Inc.
PO Box 3116, Oak Park, IL 60303 or call (312) 524-0909.

Guru's Guide™

Meditation #1 — Interrupts

Meant for serious (or aspiring) Amiga programmers only: specific details of the Amiga Exec interrupt system. More than 60 pages covering the design philosophy, general principles, rules for use, issues to consider, common problems, plus many working examples. Includes details of general interrupts, software interrupts, functions, priorities, decoding, dispatching, disabling, and sharing. Two week, money-back guarantee if not satisfied.

Written by **Carl Sassenrath**, principal designer of the Amiga Multitasking Executive (Exec) and author of the *Amiga ROM Kernel Manual: Exec.*

The Pull-Down Menu

AMIGAWORLD'S Pull-Down Menu is a great opportunity for those with AMIGA products to reach over 95,000 Amiga owners. AmigaWorld is the only publication with a subscription offer reaching every new Amiga owner, national newsstand distribution by ICD Hearst, and single copy sales in computer stores carrying the AMIGA as well as large bookstores such as B. Dalton and Walden Books.

To reserve your Pull-Down Menu ad call Heather Paquette at 1-800-441-4403. We accept checks, money orders, MasterCard or VISA.

A. How would you rate this issue of AmigaWorld? (pick one)
- ☐ 1. GREAT!
- ☐ 2. Very Good
- ☐ 3. Pretty Good
- ☐ 4. Good
- ☐ 5. Fair
- ☐ 6. Poor
- ☐ 7. Very Poor
- ☐ 8. Terrible

B. What will be your next major peripheral purchase?
- ☐ 1. Monitor
- ☐ 2. Printer
- ☐ 3. Modem
- ☐ 4. Memory Expansion
- ☐ 5. Disk Drive (hard or floppy)
- ☐ 6. Sidecar
- ☐ 7. Gen Lock or Frame Grabber
- ☐ 8. Music (Midi, Keyboard, etc.)
- ☐ 9. Other

C. Check all of the endings that best complete this sentence: "Most of AmigaWorld is . . ."
- ☐ 1. Just Right
- ☐ 2. Too Simple
- ☐ 3. Too Complex
- ☐ 4. Fluff
- ☐ 5. Useful
- ☐ 6. Useless
- ☐ 7. Interesting
- ☐ 8. Biased
- ☐ 9. Invaluable

D. What topics would you like to see covered in future issues of AmigaWorld? (Please pick three.)
- ☐ 1. C Language
- ☐ 2. Amiga Basic
- ☐ 3. CLI
- ☐ 4. Telecommunications
- ☐ 5. Business Applications
- ☐ 6. IBM Compatibility
- ☐ 7. Home Applications
- ☐ 8. Education
- ☐ 9. Video
- ☐ 10. Science and Engineering
- ☐ 11. How others use the Amiga
- ☐ 12. Buyer's Guides
- ☐ 13. Comparative Reviews
- ☐ 14. Music
- ☐ 15. Graphics
- ☐ 16. Program Listings
- ☐ 17. New Products
- ☐ 18. Opinions
- ☐ 19. Hardware Projects
- ☐ 20. Other

E. What are your favorite things about AmigaWorld? (Please pick all that apply.)
- ☐ 1. Zeitgeist (Editor's Page)
- ☐ 2. Repartee (Letters)
- ☐ 3. Interviews
- ☐ 4. Help Key (Questions)
- ☐ 5. Features
- ☐ 6. Tutorials
- ☐ 7. Hors d'oeuvres (hints/tips)
- ☐ 8. Advertisements
- ☐ 9. Reviews
- ☐ 10. Notepad (News)
- ☐ 11. Digital Canvas
- ☐ 12. Articles
- ☐ 13. Covers
- ☐ 14. Reader Service Card
- ☐ 15. Everything

F. Which of the following categories do you plan to purchase software from in the next 12 months?
- ☐ 1. Entertainment
- ☐ 2. Word Processing
- ☐ 3. Communications
- ☐ 4. Spreadsheets
- ☐ 5. Home Productivity
- ☐ 6. Programming
- ☐ 7. Software Development
- ☐ 8. Video/Graphics Creation
- ☐ 9. Database Management
- ☐ 10. Financial Management
- ☐ 11. Graphics
- ☐ 12. Education
- ☐ 13. Music
- ☐ 14. Hardware Development
- ☐ 15. Sound/Speech Development
- ☐ 16. CAD/CAM

G. Where did you get this copy of AmigaWorld?
- ☐ 1. I subscribe
- ☐ 2. Newsstand
- ☐ 3. Other

H. Where do you buy your computer products? (Please pick one.)

READER SERVICE

December card valid until February 28, 1989.

Name _____

Address _____

City/State/Zip _____

Telephone _____

A. How would you rate this issue of AmigaWorld? (pick one)
- ☐ 1. GREAT!
- ☐ 2. Very Good
- ☐ 3. Pretty Good
- ☐ 4. Good
- ☐ 5. Fair
- ☐ 6. Poor
- ☐ 7. Very Poor
- ☐ 8. Terrible

B. What will be your next major peripheral purchase?
- ☐ 1. Monitor
- ☐ 2. Printer
- ☐ 3. Modem
- ☐ 4. Memory Expansion
- ☐ 5. Disk Drive (hard or floppy)
- ☐ 6. Sidecar
- ☐ 7. Gen Lock or Frame Grabber
- ☐ 8. Music (Midi, Keyboard, etc.)
- ☐ 9. Other

C. Check all of the endings that best complete this sentence: "Most of AmigaWorld is . . ."
- ☐ 1. Just Right
- ☐ 2. Too Simple
- ☐ 3. Too Complex
- ☐ 4. Fluff
- ☐ 5. Useful
- ☐ 6. Useless
- ☐ 7. Interesting
- ☐ 8. Biased
- ☐ 9. Invaluable

D. What topics would you like to see covered in future issues of AmigaWorld? (Please pick three.)
- ☐ 1. C Language
- ☐ 2. Amiga Basic
- ☐ 3. CLI
- ☐ 4. Telecommunications
- ☐ 5. Business Applications
- ☐ 6. IBM Compatibility
- ☐ 7. Home Applications
- ☐ 8. Education
- ☐ 9. Video
- ☐ 10. Science and Engineering
- ☐ 11. How others use the Amiga
- ☐ 12. Buyer's Guides
- ☐ 13. Comparative Reviews
- ☐ 14. Music
- ☐ 15. Graphics
- ☐ 16. Program Listings
- ☐ 17. New Products
- ☐ 18. Opinions
- ☐ 19. Hardware Projects
- ☐ 20. Other

E. What are your favorite things about AmigaWorld? (Please pick all that apply.)
- ☐ 1. Zeitgeist (Editor's Page)
- ☐ 2. Repartee (Letters)
- ☐ 3. Interviews
- ☐ 4. Help Key (Questions)
- ☐ 5. Features
- ☐ 6. Tutorials
- ☐ 7. Hors d'oeuvres (hints/tips)
- ☐ 8. Advertisements
- ☐ 9. Reviews
- ☐ 10. Notepad (News)
- ☐ 11. Digital Canvas
- ☐ 12. Articles
- ☐ 13. Covers
- ☐ 14. Reader Service Card
- ☐ 15. Everything

F. Which of the following categories do you plan to purchase software from in the next 12 months?
- ☐ 1. Entertainment
- ☐ 2. Word Processing
- ☐ 3. Communications
- ☐ 4. Spreadsheets
- ☐ 5. Home Productivity
- ☐ 6. Programming
- ☐ 7. Software Development
- ☐ 8. Video/Graphics Creation
- ☐ 9. Database Management
- ☐ 10. Financial Management
- ☐ 11. Graphics
- ☐ 12. Education
- ☐ 13. Music
- ☐ 14. Hardware Development
- ☐ 15. Sound/Speech Development
- ☐ 16. CAD/CAM

G. Where did you get this copy of AmigaWorld?
- ☐ 1. I subscribe
- ☐ 2. Newsstand
- ☐ 3. Other

H. Where do you buy your computer products? (Please pick one.)
- ☐ 1. Computer Dealer
- ☐ 2. Mail Order
- ☐ 3. Manufacturer
- ☐ 4. Discount/Department Store
- ☐ 5. Other _____

I. Do you own an Amiga?
- ☐ 1. Yes
- ☐ 2. No

J. Where do you use your Amiga?
- ☐ 1. Home
- ☐ 2. Work
- ☐ 3. School
- ☐ 4. At home for business
- ☐ 5. Both at home and work
- ☐ 6. Both at home and school
- ☐ 7. I don't use an Amiga

K. Is this your copy of AmigaWorld?
- ☐ 1. Yes
- ☐ 2. No

L. If you are not a subscriber, please circle 499.

M. If you would like a one year subscription to AmigaWorld (12 issues), please circle 500 on this card. Each subscription is $24.97, Canada $34.97, Mexico $32.97, Foreign Surface $47.97, Foreign Airmail $82.97 (U.S. funds drawn on U.S. bank). Please allow 10-12 weeks for delivery.

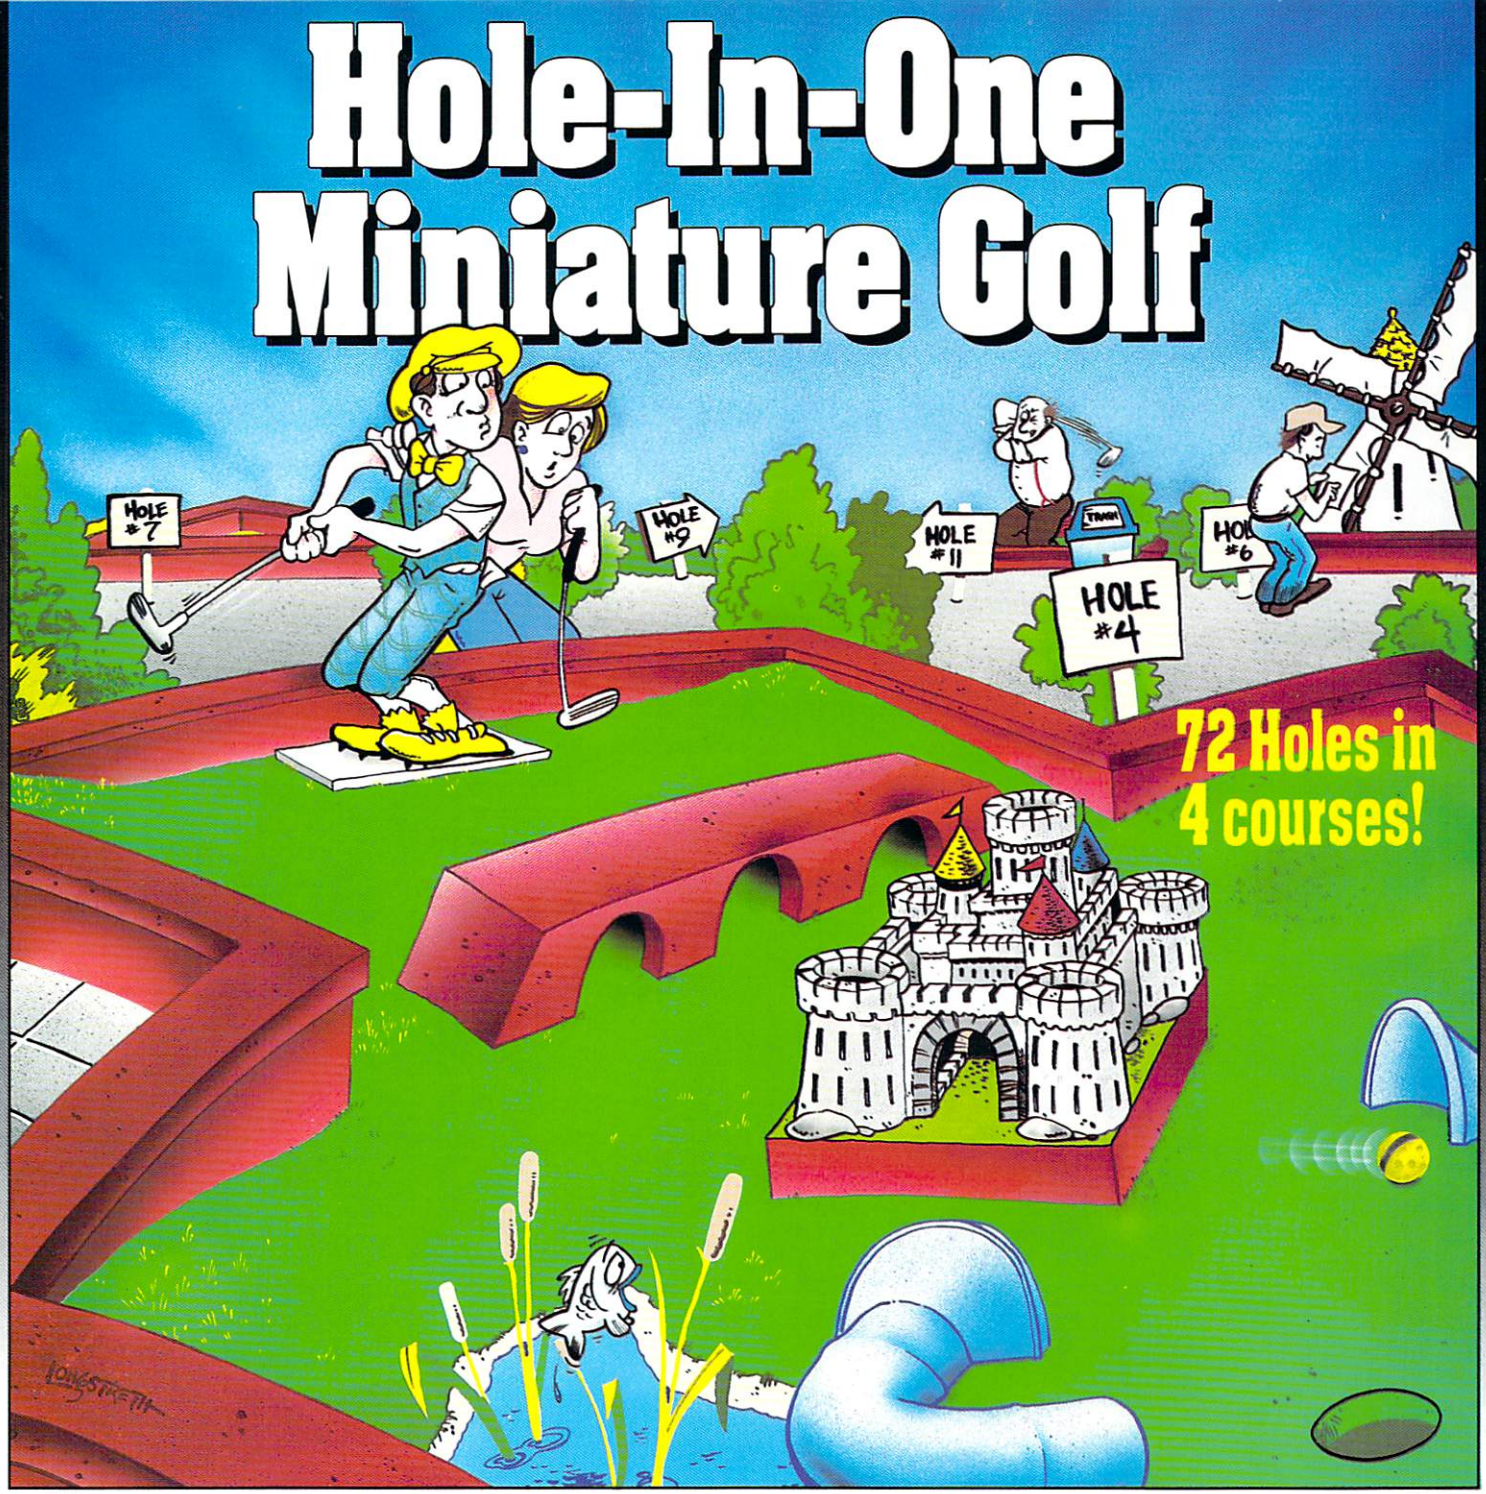
Hole-In-One Miniature Golf



Hole-In-One Miniature Golf combines digitized sound, quality graphics and superior playability with realistic ball play to give you the best miniature golf game made!

Utilizing the mouse (point and click) interface, DigiTek Software has created a game that will challenge adults yet is so simple to play that children can play as easily as adults from the very first game. This game supports up to 4 players making it one of the few games that the entire family really can enjoy together.

Hole-In-One Miniature Golf is 72 Holes of pure fun in 4 separate courses that give you classic miniature golf as well as hilarious fantasy holes. The digitized sounds of the crowd, the ball, and special effects all add to the fun and realism.

Another revolutionary game from the company that brought you Vampire's Empire, Amegas and Hollywood Poker — DigiTek Software!

DIGI-VIEW GOLD

All-New!
Hardware and Software Designed for A500/2000—Even Better Pictures Than Before!

1.

2.

Actual 4096 color Digi-View Gold picture

3. Simply the Best.

The all new Digi-View Gold is the best video digitizer for the Amiga. Period. Nothing else even comes close. Why? The secret is that Digi-View Gold captures 2.1 million colors in memory, giving you an incredible 100,000 apparent colors on screen simultaneously.

And it's easy to use. Just focus your video camera on any object or picture, and in seconds Digi-View Gold turns it into Amiga graphics that glow with vibrant color and clarity. Whether you are creating graphics for desktop publishing, presentations, video, or just for fun, Digi-View Gold gives you dazzling images with amazing simplicity.

Digi-View Gold is designed specifically for the Amiga 500 and 2000, and plugs directly into the parallel port. Digi-View Gold's powerful image capture and manipulation software (version 3.0) now has complete control of color and sharpness, full overscan, extra halfbrite, and a special line art mode for desktop publishing.

Only Digi-View Gold:

- Can digitize in all Amiga resolution modes from 320x200 up to 768x480 (full hi-res overscan)
- Uses 2 to 4096 colors (including extra halfbrite)
- Uses exclusive Enhanced HAM for super fine detail
- Is 100% IFF compatible and works with any graphics software
- Can digitize 21 bits per pixel (2.1 million colors) for the highest quality images possible
- Has advanced dithering routines that give an apparent 100,000 colors on screen simultaneously
- Has powerful Image processing controls for complete IFF picture manipulation

If you want the highest quality graphics for your Amiga, as easy as 1, 2, 3; then you need the new version of the best selling video digitizer of all time: Digi-View Gold.
