Subject: syncdet_references radiosport2000

My message to Chris Trask with these additions to his list of sync detector articles bounced, so here's my list for all to see. I see a couple of these or later versions are available in the files section, but I left them in here for completeness. Besides at the rate this group is growing, the download limit seems to be always exceeded, so some might be able to access the source directly rather than the files area.
