CONTROL SOFTWARE
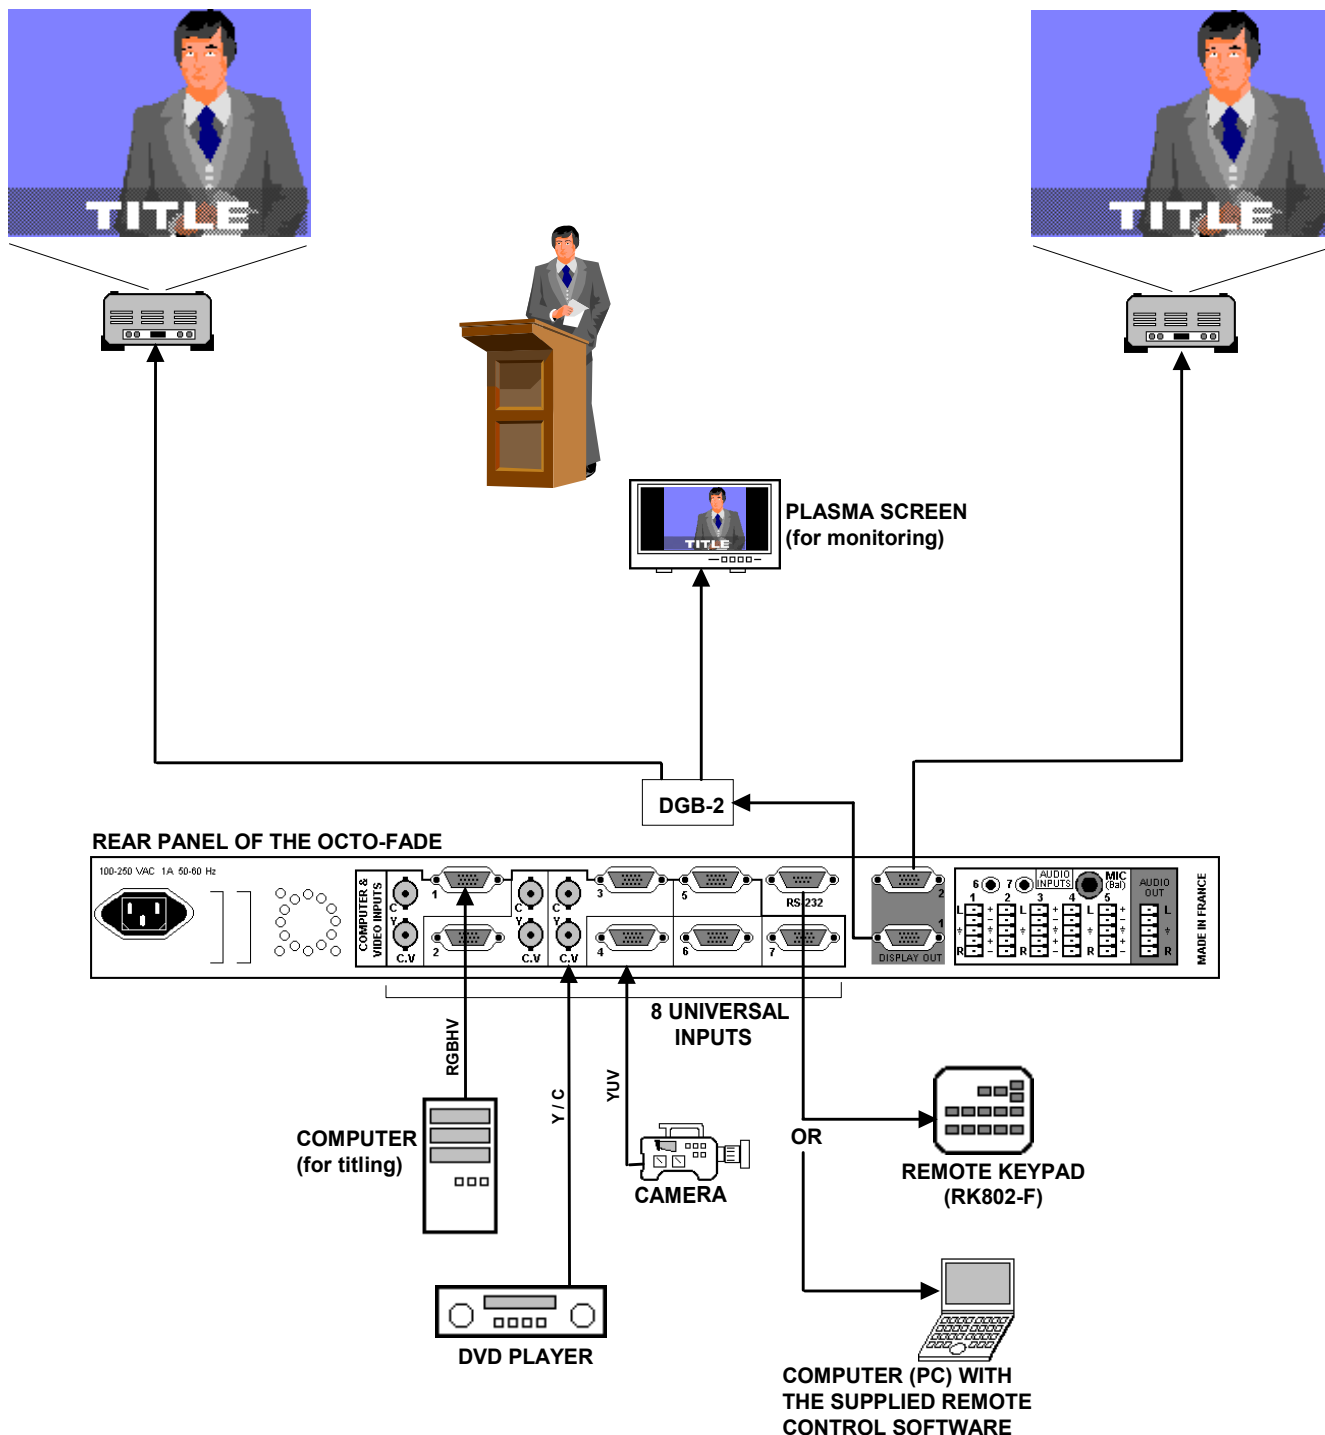

① **AIM:**

Subtitle different video sources for large screen projection. Title will be kept even while switching between 2 videos.

② **PRINCIPLE:**

- Designed around the OCTO-FADE.

- One computer is used to generate the titles.

- Up to 7 others sources (video or computer) can be displayed with or without titles.

③ **CONNECTIONS & OPERATIONS:**

- Connect the computer source (used for the titling feature) to the input #1.

- Connect the other sources (camera, VCR, DVD) to the other inputs of the OCTO-FADE. (Each input supports any type of signal).

- Connect the display devices to the output of the OCTO-FADE and of the DGB-2 (1 to 2 D.A.).

- Set the OCTO-FADE in seamless mode (reference : computer #1 input in our example).

- Select the "background " source (camera source in our example): the source is displayed on the projectors & plasma screen.

- Select the TITLE effect (with the EFFECT key).

- Then select the computer source (input #1 in our example) to overlay the TITLE onto the displayed output.

④ **REMOTE CONTROL:**

- The OCTO-FADE can be controlled through its RS-232 interface (software provided or optional remote keypad).

- An optional LAN control is also available.
