PRECISION, HIGH QUALITY POWER FOR LABORATORY AND PRODUCTION APPLICATIONS

Behlman's ACM Series AC Power Sources deliver clean, regulated linear power. Models provide from 250 VA up to 9000 VA of power at output frequencies from 45 to 10,000 Hz. The ACM Series combines highly advanced magnetics with solid state circuitry for stability and reliability.

The ACM series has many unique features including: low output distortion, wide bandwidth, fast transient response, dual voltage ranges, variable voltage & frequency controls.

A digital feedback system in the power amplifier ensures precise regulation and low distortion.

Sophisticated electronic overload and short circuit protection systems recover instantly when an overload is removed.

The ACM Series is ideal for a variety of laboratory and manufacturing applications.

All performance specifications are based on 25° C ambient temperature, nominal input line, unity power factor and operation at 74 to 100% of output voltage range.

Specifications subject to change without prior notice.
