

Not all Vacuum Pumps are Equal

Check the Differences

Ask Yourself these Questions

Do I change filters and oil often?

Does my pump clog with sawdust?

Does the vacuum fluctuate?

Is my pump a vane-type design that experiences premature vane wear?

Is energy savings important to me?

Am I spending time and money on maintenance and repair parts?

The Busch Mink Pump

No oil filters and chamber oil to change. Gearbox requires only annual changes.

Its dry, non-contacting design is very tolerant to dust particles.

Provides consistent vacuum for better holddown.

Its rotary-claw design (no vanes) eliminates wear problems.

Non-contacting rotors reduce overall horsepower.

Non-contacting design yields lower life cycle costs.

Busch Mink vacuum pumps are especially suited for the demands of CNC routing machines – they are reliable, efficient, and easy to maintain. For more information on the Mink and all your pump choices, visit our website.
