

15-3CD SKYWALKER

15 METER 3 ELEMENT BEAM

951351(7/88)

Your Cushcraft 15 meter beam is designed and manufactured to give top performance and trouble free service. All hardware is stainless steel. The antenna will perform as specified if the instructions and suggestions are followed and care is used in assembly and installation. When checking the components received in your antenna package use the parts lists in each section. It is easiest to identify the various dimensions of tubing by separating them into groups of the same diameter and length. If you are unable to locate any tube or component, check the inside of all tubing. IMPORTANT: Save the weight label from the outside of the carton. Each antenna is weighed at the factory to verify the parts count. If you claim a missing part, you will be asked for the weight verification label. There is a master parts list on page 6.

LOCATION

Location of the antenna is very important. Surrounding objects such as trees, power lines, other antennas, etc. will seriously reduce efficiency. To minimize the effects of surrounding objects, mount the antenna as high and in the clear as possible. If metal guy wires are used, they should be broken with strain insulators.

WARNING: THIS ANTENNA IS AN ELECTRICAL CONDUCTOR. CONTACT WITH POWER LINES CAN RESULT IN DEATH, OR SERIOUS INJURY. DO NOT INSTALL THIS ANTENNA WHERE THERE IS ANY POSSIBILITY OF CONTACT WITH OR HIGH VOLTAGE ARC-OVER FROM POWER CABLES OR SERVICE DROPS TO BUILDINGS. THE ANTENNA, SUPPORTING MAST AND/OR TOWER MUST NOT BE CLOSE TO ANY POWER LINES DURING INSTALLATION, REMOVAL OR IN THE EVENT PART OF THE SYSTEM SHOULD ACCIDENTALLY FALL. FOLLOW THE GUIDELINES FOR ANTENNA INSTALLATIONS RECOMMENDED BY THE U.S. CONSUMER PRODUCT SAFETY COMMISSION AND LISTED IN THE ENCLOSED PAMPHLET.

Plan your installation carefully. If you use volunteer helpers be sure that they are qualified to assist you. Make certain that everyone involved understands that you are the boss and that they must follow your instructions. If you have any doubts at all employ a professional antenna installation company to install your antenna.

MOUNTING

The mast mount bracket will accommodate up to a 2" OD (5.1 cm) mast. A 1 1/2" OD (3.8 cm) or larger heavy wall tubing mast should be used. A good heavy duty antenna rotator will provide the best service and longest life. Often it is desirable to mount several antennas on one mast. To keep possible interaction to a minimum, place your antennas as far apart as you can.

SYSTEM GROUNDING

Direct grounding of the antenna, mast and tower is very important. This serves as protection from lightning strikes and static buildup, and from high voltage which is present in the radio equipment connected to the antenna. A good electrical connection should be made to one or more ground rods (or other extensive ground system) directly at the base of the tower or mast, using at least 10AWG ground wire and non-corrosive hardware. For details and safety standards, consult the National Electrical Code. You should also use a coaxial lightning arrester. Cushcraft offers several different models, such as LAC-1, LAC-2 and the LAC-4 series.

TUNING PROCEDURE

If you wish to check the SWR before installation, please observe the following procedures. Temporarily mount the antenna with the boom vertical, reflector at least one foot (30 cm) off the ground on a non-metallic support (wooden box), to prevent detuning the antenna. Guy the top of the boom. Do not use line with wire in it (some clotheslines have a wire core). Keep other antennas, metal objects and guy lines clear of the antenna under test. Do not attempt to tune the Yagi near the ground with the boom parallel to the ground since ground effects will nullify any adjustment and degraded performance will result.

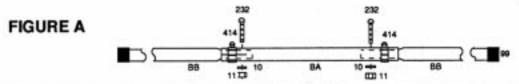

Run the coax cable from your transmitter to the area in which the antenna is going to be tested. The length of this cable or your feedline is not critical. Connect a good quality SWR bridge to the end of this cable. Connect a short length of cable [2 feet (61 cm) or less] from the SWR bridge to the antenna. Set the transmitter to your center operating frequency. When you read SWR, be sure you move far enough away from the antenna so that your body does not effect the reading.

Measure the SWR. If it is high, move the Reddi-Match clamp (108) by 1/4" (.6 cm) in one direction and check the SWR, if the SWR improved then continue moving the Reddi-Match clamp in the same direction. If the SWR deteriorated then move the Reddi-Match clamp in the opposite direction.

When no further improvement can be made you have matched your antenna to 50 Ohms. Then tighten all connections on the Reddi-Match assembly. Tape the feedline to the boom and mast.

#1 - BOOM ASSEMBLY

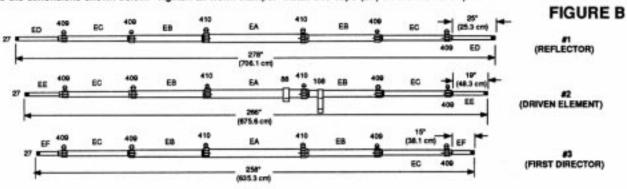

Place a worm clamp (414) over each BA tube end. Insert the swaged end of a BB tube into each end of the BA tube. Align holes and install screws (232), lock washers (10) and nuts (11). Tighten screws and worm clamps. Push end caps (99) onto each end of the boom.

#2 - ELEMENT ASSEMBLY

Install clamp (88) on EA tube of #2 element. Place a worm clamp (410) on the end of each EA tube. Insert the EB tubes 4" (10.2 cm) into each end of the EA tube. Tighten the worm clamps (410) securely. On the driven element, slide the Reddi Match clamp (108) on EB as far as it will go. Place a worm clamp (409) on the end of each EB tube. Insert the EC tubes 4" (10.2 cm) into both ends of elements 1,2 and 3. Place worm clamps (409) on the slotted ends. Insert the element tips ED, EE and EF in the appropriate elements (figure B). Adjust element tips and overall length to the dimensions shown below. Tighten all worm clamps. Install end caps (27) on the element tips.

#3 - ELEMENT MOUNTING

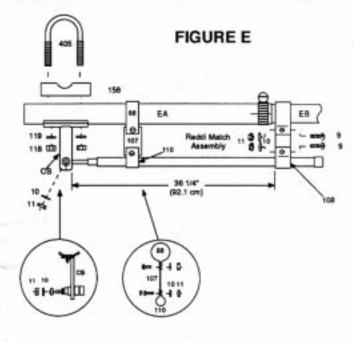

Mount the U-bolt brackets (156) as shown in figure C and E. Postion the elements on the boom as shown in figure D. The longest element (reflector) is #1. Align the elements and tighten the U-bolts. Note that the driven element backing plate includes the connector bracket (CB). See figure E. This should be mounted with the connector pointing to the center of the boom to allow easy connection of the feedline.

#6 - FEEDLINE ASSEMBLY

Before attaching the feedline permanently, tune the antenna as outlined on page 2. The antenna is designed for use with 50 ohm coaxial cable terminated with a PL-259 connector. Any length of feedline can be used with your Yagi. The shortest length cable will have the least loss. A connector boot is included for use with your new antenna. Figure G. Slide the boot over the cable before attaching your PL-259. Coat only the outside connector threads and shell with silicone grease. Do not coat the center pin and/or receptacle. After the PL-259 is firmly screwed on to the antenna connector, slide the vinyl boot over the connector and against the mast bracket.

WARRANTY

Cushcraft Corporation, P.O. Box 4680, Manchester, New Hampshire 03108, warrants to the original consumer purchaser for one year from date of purchase that each Cushcraft antenna is free of defects in material or workmanship. If, in the judgement of Cushcraft, any such antenna is defective, then Cushcraft Corporation will, at its option, repair or replace the antenna at its expense within thirty days of the date the antenna is returned (at purchasers expense) to Cushcraft or one of its authorized representatives. This warranty is in lieu of all other expressed warranties, any implied warranty is limited in duration to one year. Cushcraft Corporation shall not be liable for any incidental or consequential damages which may result from a defect. Some states do not allow limitations on how long an implied warranty lasts or exclusions or limitations of incidental or consequential damages, so the above limitation and exclusion may not apply to you. This warranty gives you specific legal rights, and you may also have other rights which vary from state to state. This warranty does not extend to any products which have been subject to misuse, neglect, accident or improper installation. Any repairs or alterations outside of the Cushcraft factory will nullify this warranty.
