1542-9701 Electronic Stroboscope User and Service Manual

WARRANTY

We warrant that this product is free from defects in material and workmanship and, when properly used, will perform in accordance with applicable IET specifications. If within one year after original shipment, it is found not to meet this standard, it will be repaired or, at the option of IET, replaced at no charge when returned to IET. Changes in this product not approved by IET or application of voltages or currents greater than those allowed by the specifications shall void this warranty. IET shall not be liable for any indirect, special, or consequential damages, even if notice has been given to the possibility of such damages.

THIS WARRANTY IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING BUT NOT LIMITED TO, ANY IMPLIED WARRANTY OF MERCHANTIBILITY OR FITNESS FOR ANY PARTICULAR PURPOSE.

WARNING

OBSERVE ALL SAFETY RULES WHEN WORKING WITH HIGH VOLTAGES OR LINE VOLTAGES.

Dangerous voltages may be present inside this instrument. Do not open the case Refer servicing to qulified personnel

HIGH VOLTAGES MAY BE PRESENT AT THE TERMINALS OF THIS INSTRUMENT

WHENEVER HAZARDOUS VOLTAGES (> 45 V) ARE USED, TAKE ALL MEASURES TO AVOID ACCIDENTAL CONTACT WITH ANY LIVE COMPONENTS.

USE MAXIMUM INSULATION AND MINIMIZE THE USE OF BARE CONDUCTORS WHEN USING THIS INSTRUMENT.

Use extreme caution when working with bare conductors or bus bars.

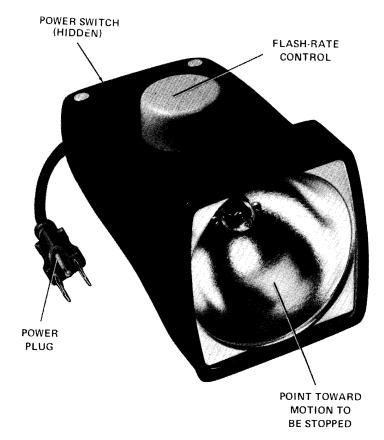

WHEN WORKING WITH HIGH VOLTAGES, POST WARNING SIGNS AND KEEP UNREQUIRED PERSONNEL SAFELY AWAY.

CAUTION

DO NOT APPLY ANY VOLTAGES OR CURRENTS TO THE TERMINALS OF THIS INSTRUMENT IN EXCESS OF THE MAXIMUM LIMITS INDICATED ON THE FRONT PANEL OR THE OPERATING GUIDE LABEL.

Type 1542-B STROBOTAC® Electronic Stroboscope

specifications

Flash Rate: ≈ 180 to 3800 flashes per minute (3 to 63 flashes per second), continuously adjustable by uncalibrated 5-turn control.

Flash Duration: $\approx 3 \,\mu s$ at 63 fps, $\approx 2 \,\mu s$ at 3 fps. Beam Angle: ≈ 10° at half-intensity points.

Power: 105 to 125 V, 50 to 60 Hz, 10 W. Mechanical: Dimensions (wXhXd): 4.2X2.16X7.52 in. (107X55X191 mm). Weight: 1.8 lb (0.8 kg) net, 2 lb (0.9 kg) shipping.

Catalog Number Description 1542-B Strobotac® Electronic Stroboscope 1542-9701 1530-9410 l Replacement Strobotron Flash Lamp 1542-9600

Arm to position light conveniently in permanent or semi-permanent installations

PURPOSE.

The Type 1542-B Strobotac® electronic stroboscope produces a bright flashing light over a wide flash-rate to stop motion. It is well suited for use in industrial applications as an engineering or maintenance tool, and as an aid in the classroom. Additionally, it is small, light, simple to operate and inexpensive.

DESCRIPTION.

The 1542-B is housed in a tough plastic case that is shaped for comfortable hand-held operation. Alternatively, a threaded hole is provided for tripod mounting. The unit is equipped with two controls: a flash-rate knob for continuous control of flash rate (without range changing), and an ON-OFF pushbutton power switch. The light output is electronically compensated for relatively constant subjective brightness (as the flash rate decreases, the light intensity increases).

TRIPOD MOUNTING.

A stainless-steel insert, which will accept a standard \(\frac{4}{2} \) tripod thread, is built into the bottom of the case. To

tripod mount the 1542-B screw the threaded end of the tripod pan head into the insert and hand tighten.

OPERATING PROCEDURE.

To operate the 1542-B:

- a. Plug the power cord into a 115-V 50/60 Hz source (standard ac line socket).
 - b. Depress the ON-OFF switch to turn the strobe on.
- c. Point the strobe light toward the motion to be stopped.
- d. Rotate the flash-rate knob until the visual image of the motion stops. The visual image may be made to move slowly through its cycle by a slight readjustment of the knob setting in either direction. Note: This is a five-turn control without positive stops.

WARRANTY.

We warrant that each new instrument manufactured and sold by us is free from defects in material and workmanship and that, properly used, it will perform in full accordance with applicable specifications for the period specified on

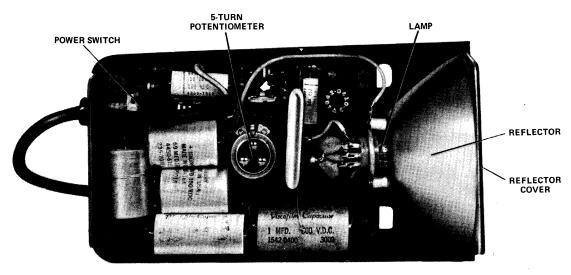

Figure 1. Interior View.

page 6. Any instrument or component that is found within the period not to meet these standards, after examination by our factory, Regional Center, or authorized repair agency personnel, will be repaired or, at our option, replaced.

FIELD SERVICE.

The warranty cited above attests the quality of materials and workmanship in our products. When difficulties do occur, our service engineers will assist in any way possible. If the difficulty cannot be eliminated by use of the following service instructions, please write or phone our Service Department, giving full information of the trouble and of steps taken to remedy it. Be sure to mention the type number of the instrument.

Before returning an instrument to GenRad for service, please contact our Service Department or nearest Regional Center, requesting a "Returned Material" tag. Use of this tag will ensure proper handling and identification. For instruments not covered by the warranty, a purchase order should be forwarded to avoid unnecessary delay.

MAINTENANCE.

Figure 1 identifies the major components of the 1542-B with their corresponding locations. A schematic diagram (Figure 3) and a parts list are also included as part of these instructions. However, untrained personnel should not attempt any repairs other than those presented in paragraphs that follow.

WARNING

Potentially lethal voltages are exposed in a 1542-B operated with its cover removed.

LAMP REPLACEMENT.

To remove the lamp:

- a. Unplug the instrument at least 3 minutes before opening the case.
- b. Position the instrument with the FLASH RATE CONTROL down remove the four Phillips-head screws from the case.
 - c. Lift off the upper half of the case.

WARNING

Short circuit the brown and yellow wires on the lamp socket for 15 seconds, to avoid the possible danger of a shock due to energy stored in capacitors. (Use a screwdriver with an insulated handle.)

- d. Remove the plastic reflector cover.
- e. Carefully unplug the lamp from the socket.

Lamp Installation.

To install the lamp:

- a. Properly align the lamp pins with the lamp socket.
- b. Push the lamp in until it seats, being careful not to bend the pins.

ETCHED-BOARD MAINTENANCE.

a. Perform steps a through d of the lamp-removal procedure.

WARNING

Potentially lethal voltages are exposed in a 1542-B operated with its covers removed.

- b. Remove the flash-rate knob (refer to the knob removal procedure).
- c. Remove the potentiometer mounting nut with a 3/8 in, wrench.
- d. Remove the etched-circuit board, reflector, and back plate from the top half of the case.
- e. Remove the old component(s) and solder the new one in place.
- f. Remount the etched-circuit board, reflector, and back plate in the top half of the case. (Check to see that the backplate and reflector are inserted in the slots provided in the case before tightening the mounting nut.)
- g. Place potentiometer mounting nut on the potentiometer shaft and tighten the nut.
- h. Replace the knob (refer to the knob installation procedure).
- i. Reverse steps d through a of the lamp-removal procedure.

KNOB REMOVAL.

Use the following procedure to remove the FLASH RATE knob:

- a. Grasp the knob firmly with the fingers close to the case and pull the knob straight away from the case don't attempt to pry it off.
- b. Remove the knob bushing by loosening the bushing setscrew with a 3/32-in. Allen wrench.

To separate the bushing from the knob, if they should remain combined when the knob is removed, drive a machine tap a turn or two into the bushing to provide sufficient grip for easy separation.

KNOB INSTALLATION.

To install a knob assembly on the FLASH RATE control shaft:

a. Mount the knob bushing on the shaft, keeping the end of the shaft flush with the outer surface of the bushing; tighten the setscrew.

NOTE

If the end of the shaft protrudes through the bushing, the knob cannot seat properly.

- b. Place the knob on the bushing with the retention spring opposite the setscrew.
- c. Push the knob in until it bottoms and pull it slightly to check that the retention spring is seated in the groove in the bushing.

NOTE

If the retention spring in the knob is loose, reinstall it in the interior notch with the small slit in the inner diameter of the wall.

CLEANING.

CAUTION

Unplug the 1542-B before cleaning.

Do not use an organic solvent. Use a damp NOT WET cloth or sponge with a mild soap or detergent solution to clean the case, reflector, and reflector cover.

Flexible extension arm P/N 1542-9600 for fixed mounting of strobe. Pan-head screw attaches arm to bottom of strobe. Arm reach is 45-in.

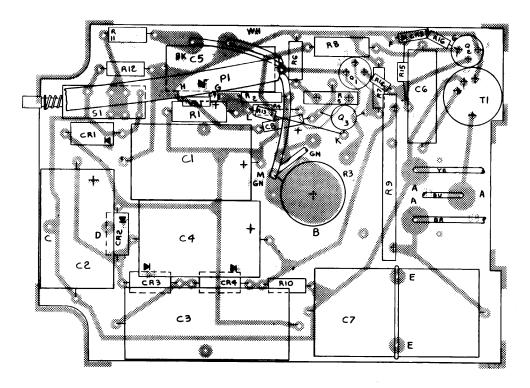

Figure 2. Type 1542-B etched-board assembly.

NOTE: Orientation: Viewed from foil side. Part number: Refer to caption. Symbolism: Wavy-line area = part; black ckt pattern (if any) = foil side, gray = other side.
