2. In the previous system, the option number is used to choose the language of the operation manual (standard accessory). In the new option system, it is used to add an operation manual (optional accessory) of the language the customer desires.
3. No selection of addition/deletion is required for the operation manual because it is only available as an optional accessory in the new option system.

2. CD-ROM that contains the contents of the 4263B Operation Manual is furnished as a standard content.
