

19 Waterproofing the Feeder Window

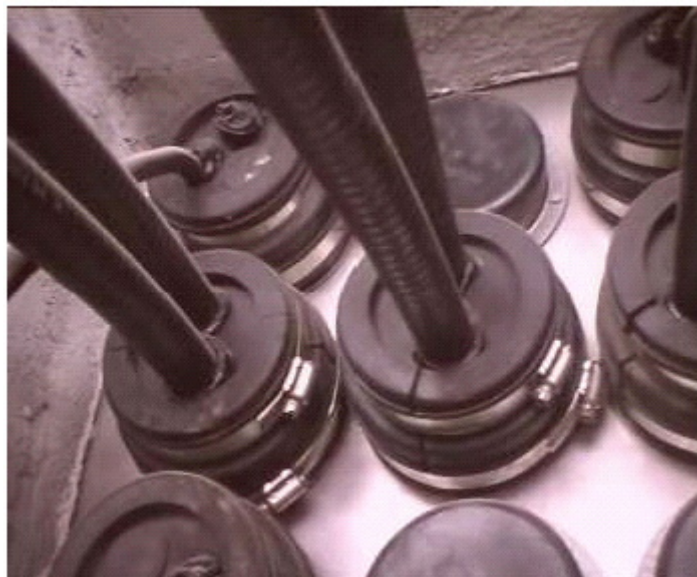

Feeder windows are categorized into encapsulation window and glass window. Waterproof the feeder window based on the types of feeder window.

Procedure

- Waterproof the encapsulation window.
 1. Put the two semicircle sealing sleeves around the outside of the big holes in the feeder window.
 2. Put two steel hoops in the two grooves of the sealing sleeves, and then tighten the screws on the hoops using a screwdriver.
 3. Inject glass cement around the feeder window.
 4. Block the unused holes using special plugs.

Figure 19-1 shows the feeder window after waterproof treatment.

Figure 19-1 Waterproofed feeder window

- Waterproof the glass window.
 1. Remove the glass, and then cut an opening of proper size at a corner of the glass.

2. Protect the cut using rubber or tape. Use tape to wrap the feeder to be led through the opening.
3. Lead the feeder indoors through the glass window.
4. Waterproof the joint between the glass and the feeder using glass cement.
