

Kodak SurePath Paper Handling

The sure way to more productive scanning.

SurePath Paper Handling is one more way KODAK Scanners give you thousands of hours of reliable, trouble-free operation—from start to finish. Here's how:

GO AHEAD. FEED OUR SCANNERS ANYTHING. (Well, except toast.) You can feed them delicate onionskin, heavy cardstock and even crumpled originals. Our scanners are specially designed to adjust to a full range of paper sizes, weights and thicknesses for uninterrupted scanning and safe handling of all your important documents.

SENSORS KEEP AN EYE ON YOUR PAPER FLOW. Our sensors give you the full benefit of Kodak's imaging expertise. They track every page, checking for overlaps and misfeeds. And, in the wink of an eye, our CCD sensors deliver outstanding image quality at full rated speed. So you can be confident documents are captured right the first time.

DESIGNED FOR JAM-FREE SCANNING, EVEN AT PRODUCTION SPEEDS. Once your document enters the scanner, our transport architecture ensures that nothing gets in the way. It not only keeps constant control of every document, it maintains the flat surface required for optimum image capture.

IMPRINT WITH SPEED AND ACCURACY. SurePath Paper Handling lets you keep track of documents during and after scanning. It accommodates options inside the paper path—like imprinting—with a high degree of accuracy.

WORK COMES OUT AS NEATLY AS IT WENT IN. When a stack is finished scanning, your work is done, too. Our receiving hoppers keep your documents in the right order and in good condition.
