

Original E-MAIL with LeCroy

Hello Mark,

Yes, we have discussed it here in NY. We would like to provide a LeCroy logo to you and ask you to include a link to our web site so that users can see current app notes and products. Would you be able to do that? We are clear for you to go ahead.

Regards,

John Hannes

John,

I would be providing the original LeCroy software free of charge, as with the software that I have developed for the 7200/A oscilloscopes. As the site explains, I am providing this information to help others who may have purchased one of these units without having any knowledge about them. When I had first spoke with LeCroy's service department I was told that they were getting a large number of calls from people like myself asking about LeCroy's older products. LeCroy's service department was very helpful in getting me the information I needed to restore the units I had purchased and only charged me for items I purchased from them, but never for the software, information and advice.

Just to be specific, I would like to place the following items on-line for free access:

LeCroy 7200 Installation Disks 1-4, Version 1.5.0

LeCroy 7200 Configuration Disk, diagnostics and low format programs

LeCroy 7200A Installation Disks 1&2, Version 1.5.0

LeCroy 7200A Diagnostics

LeCroy 7200/A MIL-STD and NIST calibration disk

Disks that are not DOS compatible, I will convert to a RAW image file format.

If it is possible, and depending on free time, I would also like to convert some sections of the manuals into PDF format. Mainly some of the sections documenting the math functions and their use. I could provide these documents to LeCroy for prior approval if desired.

If you are still approving me to place this information on these two web sites, is there any licensing information you would like me to include?

Thanks again for all your help in this matter.

Mark
