Model 9301-02 Standard Resistor Interconnecting Fixture

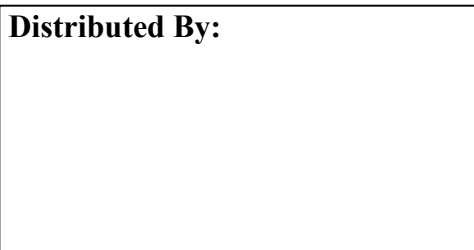

*No Oil Clean Up
Scanner Compatible
High Current Capability
Fast & Convenient*

General Description:

The Model 9301-02 solves the inconveniences normally associated with standard resistor oil baths. This fixture offers a multiple channel arrangement for interfacing between resistors, shunts and scanners with high and low current capabilities.

Offered in any size, shape or configuration (must specify), this adapter allows connection and disconnection of resistors and shunts to be performed in seconds. The above fixture adapts to the Model 9301JW or any resistor maintenance oil bath and can also be used with the resistor holding fixture Model 9301-01.
