

MagBond - The new self bondage lock

... safely more fun!

Prizes and order details are listed at the end of this document.

The Magbond is a self made, completely new innovative time lock which is very safe, easy and comfortable to use. It consists of an aluminium mount with an electro magnet

By switching it on, it holds the attached disk very strongly. Human force cannot remove it. When the battery is empty, the lock opens automatically. Therefore it is very safe to use. Alternatively, the lock can be opened with the little switch on the battery holder.

Finally, time has come for quick and safe bondage sessions!

The lock does not contain parts which can fail or jam. It is only the magnetic force which holds the disk with the attachment loop in place. When the battery is empty there is no way that the lock doesn't open.

To get started, it is enough to put the battery in. There is no freezing as with the ice lock, no dripping and no reliance on room temperature. The best feature is the locking process. Just by approaching the attachment disk, it does the click sound and just locks.

The battery holder can also be locked away with the comprised cable ties.

You are buying an exclusive product which you find nowhere else. You get 2x 9V-blocks, which open after 1h45 if not a bit earlier. Please consider a longer locking time with high prized battery blocks. Usually it is 20% higher than with the low budget versions. The best way is to test the battery type once before using.

If you want a shorter locking time, you need to discharge the battery for a certain amount of time. That way, you can choose whatever locking time you want.

There are two versions of the lock which are described below:

1. MagBond for wall mount

Youtube video: <https://www.youtube.com/watch?v=W01cVhTQmxo>

Picture 1 - Wall mount

The lock can be attached to the wall with four screws. Alternatively, you can attach it to solid furniture. The loop can be used to link handcuffs to. You get the feeling as if you were directly cuffed to the wall or the furniture. You can't get this feeling with other devices.

2. MagBond with two loops

Youtube-Video: <https://www.youtube.com/watch?v=2m9oupB4tDA>

Picture 2 - Two loops

You can use the device as a normal lock and attach other locks, chains or ropes to it.

Scope of delivery

1x time lock, holding force appr. 30 kg with cable (length 1,50 m)

1x attachment plate

2x battery 9V

1x manual with tips and tricks

1x cable ties for battery fixation
