Good news for yacht owners

“The new Mastervolt ChargeMaster charges batteries always and everywhere.”

But the best news
is for all the batteries
in the world

Suitable for all
types of batteries

A close-up photograph of a blue autoranging power plug mounted inside a white plastic enclosure on a ship's deck. The plug is a standard three-pronged design with a blue body and a white base. A yellow power cable is plugged into the bottom of the plug. The enclosure is mounted on a dark, weathered metal surface, likely part of the ship's hull or deck structure. In the background, several thick, braided yellow cables are visible, running diagonally across the frame. The overall scene suggests a maritime or industrial setting where power is being supplied to equipment.

A detailed close-up of an industrial terminal block, likely a Phoenix Contact model, mounted on a grey metal panel. The terminal block features multiple rows of screw terminals. On the left, a white terminal block is partially visible with blue, yellow, and orange wires connected. The main terminal block has several red and yellow wires inserted. A black cable with a red braided shield is connected to a terminal. A green braided shielded cable is also visible. The terminal block is secured with screws. In the background, there are two rectangular metal mesh filters. The overall scene is well-lit, showing the intricate details of the wiring and the industrial components.

MASTERVOLT

A person wearing a red and blue plaid shirt is shown from the chest up, holding a teal and grey Mastervolt ChargeMaster 24/40-3 automatic battery charger. The device is rectangular with a teal top section featuring a small LCD screen and four indicator lights. The bottom section is grey with teal accents. The person's hands are positioned to slide the device into a mounting bracket on a wall. The background is a plain, light-colored wall.
