LAN Hub Controller model **R190**

Specifications

Controlling Device:
Monre Electronics' One Net

Output Connector:
Detachable Screw Connectors

Relay Capacity:
1 Amp at 30 Volts DC
(4) SPST, NO

Input Connector:
RJ-45

Ethernet Speed:
10/100 BaseT

Power Requirement for External Power Supply:
+5VDC - 90/240 VAC , 50/60 Hz
wall unit supplied

Physical:
19" W X 1.75" H X 6" D
6 lbs.

Features

- **Remote Contact Closures**
- **1 Standard Rack Unit**
- **Convenient Detachable Screw Connections**
- **Four Separate Relays**
- **Includes power pack**
- **Interfaces with R189 OneNet Encoder/Decoder**

Description

Monroe Electronics' Model R-190 supplies remote contact closure from a central R189 OneNet Encoder/Decoder. This allows the operator to perform remote functions at peripheral Hubs from the central site during EAS alerts.

LAN IP addresses may be assigned to the R190 from any PC, using a web browser.

Up to 8 R190's may be cotrolled by a single OneNet Encoder/Decoder.

Each relay contact may be addressed by FIPS code from the controlling OneNet, making remote switching by FIPS code possible.

Typical R190 Application

800-821-6001
