● Please take care not to drop accelerometers and carefully handle them with attachments.
There is likely to be trouble of piezoelectric accelerometers by (giving) excessive shock.
The excessive shock carries some damages onto piezoelectric ceramic element.

Low-noise coaxial cables

	Name	Model	Diameter × length	Connector screw thread	Capacitance	Max. temperature	Sheath material/color
1	Standard cable	***VP-51A***	φ2.1 mm × 2 m	10-32UNF	180 pF	105 ℃	PVC・black
2	Heat-resistant cable	***VP-51B***	φ2.1 mm × 2 m	10-32UNF	220 pF	260 ℃	PTFE・red
3	3-axis standard cable	***VP-51C***	φ2.1 mm × 2 m	10-32UNF	180 pF	105 ℃	PVC・black/white/red
4	Ultra-compact accelerometer cable	***VP-51L***	φ1.2 mm × 2 m	M3×0.5 10-32UNF	260 pF	160 ℃	FEP・black
5	Heat-resistant cable	***VP-51I***	φ2 mm × 1 m	10-32UNF	150 pF	300 ℃	Stainless steel plated
6	PV-08 standard cable	***VP-51J***	φ1.2 mm × 380 mm	M2×0.25 10-32UNF	60 pF	160 ℃	FEP・black
7	PV-97B cable	***VP-51LL***	φ1.2 mm × 2 m	M2×0.4 10-32UNF	260 pF	160 ℃	FEP・black

Piezoelectric Accelerometer

When an external force is applied to certain crystals, they create an electrical charge that is proportional to the amount of force exerted on their surface.
This phenomenon is called the piezoelectric effect.
A piezoelectric accelerometer is constructed with a piezoelectric element that makes use of this effect. Piezoelectric accelerometers are small and lightweight, which allows them to cover a wide range of vibration acceleration values and vibration frequencies. Further advantages are high precision and high reliability. Currently, piezoelectric accelerometers are standard devices widely used for acceleration measurements.
As shown in Figure 1, there are two basic accelerometer types, which differ in the way the piezoelectric element is used.

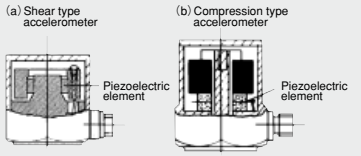

Fig. 1 Construction of piezoelectric accelerometers

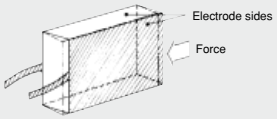

Fig. 2 Principle of shear type accelerometer

Shear type accelerometer

In this type of accelerometer, the piezoelectric element is subject to a shear force, which yields high sensitivity and allows compact dimensions. Noise caused by temperature changes (the so-called pyroelectric output which is a characteristic of piezoelectric accelerometers) is low, which is advantageous for measurements in the low frequency range. Shear-type accelerometers are suitable for measuring and monitoring low-level, low-frequency vibrations such occur in machinery, in buildings and other structures, as well as during seismic activity.

Compression type accelerometer

In this type of accelerometer, the piezoelectric element is subject to a force that compresses it from the top. Construction is simple and high mechanical strength can be achieved, which makes such accelerometers suitable for high acceleration and shock measurements.
