

(Only before first use. The R&S®EFL110/210 will keep these settings)

1 LOADING A CHANNEL PLAN (only necessary if outside USA – default setting is FCC channel plan)

1 Press  to switch to the spectrum analyzer mode

2 Press  for more than one second

Use  to select the channel plan
Select **FCC** for USA and **CCIR** for Europe

2 ANTENNA CONFIGURATION

1 Press  to make menu visible

2 With  select **LEAKAGE->ANTENNA CONFIG.**

3 With  select **ANTENNA**

Use  to select **your antenna** from the list

4 With  select **EXT. AMP.**

Use  to select your **Ext.Amp.ON** from the list

Default for R&S®EFL-Z100 is **EXT. AMP. ON**

5 With  select **EXT. AMP. GAIN**

Use  to select the **gain of your antenna**

Default for R&S®EFL-Z100 is **Gain=12.5dB**

1 GETTING READY

1 Connect the antenna to the RF input of the R&S®EFL110/210:

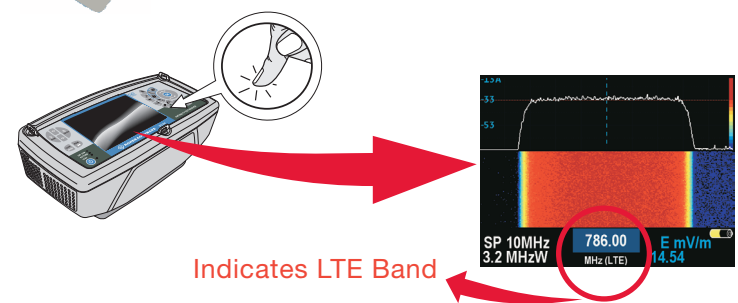

2 Press **F2** to switch on the amplifier of the R&S®EFL-Z100 antenna

3 Press **i** to switch to the leakage detection mode

4 Press **2** multiple times until the LTE band is active

2 SEARCHING FOR LEAKAGE

1 Press **6** to activate the Search Leakage Mode

2 Move the antenna (or drive your car) until the R&S®EFL110/210 detects a leak:

OPTIONAL: Press **F1** for the AUTO CONFIG. function.

It adjusts the screen for an optimum display. This is useful after a significant change in power level.

OPTIONAL: Press **1** to activate the FRAME BEEP

The R&S®EFL110/210 sounds a beep every time the waterfall is refreshed.

Watch the waterfall after every beep in order not to miss anything

9 LOCALIZING THE LEAKAGE

1 After the alarm, press **OK** button. The R&S®EFL110/210 zooms on the frequency of the leak and activates the tone generator function

2 Move the antenna. The pitch of the tone change with the signal level. The highest pitch means that the antenna is pointing at the leak.

OPTIONAL: Press **OK** for >1 sec.

Use **OK** to adjust the threshold of the tone generator. The red dashed line should be higher than the highest signal peak.
