

DUSTERS

Chemtronics dusters are microscopically clean, oil and moisture free sources of "canned air" developed for applications where safe, ultra-pure cleaning is required. Precision filtered, compact and portable Chemtronics dusters deliver a powerful blast that instantly removes particles from even the most inaccessible areas. Ultrajet[®] used to economize solvent usage by removing layers of dry particulate first so the solvent can work immediately on the encrusted soils. They can also accelerate drying of surfaces after slow evaporating cleaners have removed damaging oils and residues. Chemtronics dusters remove dust, dirt and other dry contaminants from all kinds of surfaces such as:

- Printed circuit boards (PCBs)
- Contacts and connectors
- Relays, switches and solenoids
- Computers
- Keyboards
- Audio equipment
- Laboratory instrumentation
- Medical devices
- Photographic and video equipment
- TV and VCR internals
- Electronic instruments
- Programmable Logic Controllers (PLCs)
