

FREEZE SPRAYS

Chemtronics freeze sprays are exceptionally pure and provide instantaneous freezing action. Conveniently packaged and designed for pinpoint application, these non-reactive circuit refrigerants vaporize instantly, accurately cooling targeted areas. The pinpoint spray easily isolates even the smallest failed components without freezing the surrounding area. They are used to:

- Test for and locate thermal intermittent components and systems
- Provide heat sink protection for heat sensitive components during soldering and desoldering
- Low temperature testing of prototype circuitry and electromechanical systems
- Locate hairline cracks in stressed traces of PC board
- Freezing adhesives for quick removal

Freez-It® Freeze Sprays are available in regular and antistatic formulations for use on static-sensitive components. Freez-It® Antistat outperforms competitive products because it generates significantly less static during application.

- Rapidly cool an area to -51 °C
- Non-abrasive, safe on plastics and other sensitive surfaces
- Nonflammable
- Evaporates quickly
- Leaves no residue
- Ozone safe; CFC/HCFC free
