

responsibility of the political institutions to insist that the consequences of such decision be objectively examined and studied prior to the decision. The converse applies equally well: where problems exist, it is again up to the body politic to propose alternative solutions, with each being examined for its consequences. It is easy to blame technology for our present ills. In practice, it is the decisions made by our political bodies that determines whether these effects will, on the balance, improve or degrade the environment of man.

Appreciations

Once again it is my privilege to extend the warmest appreciation, on behalf of the AIAA and the readers and authors of this journal, to the following retiring associate editors:

Dr. Maurice L. Anthony
Dr. R. Kenneth Lobb

Prof. Jean Mayers

Each of them has added something personal to this journal, and their insights and judgments have aided us in improving both its standards and utility. We thank each one with greatest sincerity.

Professor Roberto Vaglio-Laurin has graciously accepted our invitation to extend his term of office for one more year. We also wish to welcome our new associate editors; Mr. Leif Potter, Professor Joseph Kempner, and Dr. Herbert Rauch; and we are looking forward to their association with us for the next three years. Last but hardly least, we wish to acknowledge the AIAA editorial staff, particularly Ruth Bryans and Anne Huth, who have kept the journal in print in spite of a long strike earlier this year.

George W. Sutton
Editor-in-Chief
