Errata: "Euler's Rotational Equations for Bodies with the Inertia Tensor Varying due to Mass Redistribution and Mass Loss"

WECHESLAV K. HRUSHOW
TRW Systems Group, Redondo Beach, Calif.

THE following explanatory footnote should be added to the sentence immediately preceding Eq. (15): "It is assumed for simplicity that $\bar{r}$, $\dot{r}$, and $\ddot{r}$ are collinear in body coordinates. This indicates that Eqs. (15–17) represent somewhat less than the most general case. However, they are still sufficiently general for this analysis."
