

qualifications in scientific publications, having spent a career which spans more than 40 years dedicated to this type of activity—first with the American Society of Civil Engineers, then with the American Institute of Physics, and finally with us. I have worked with Ruth for the last ten years that I have been closely involved with AIAA publications. I, like every colleague I have met who has been involved in AIAA publications, have gathered a considerable respect for her ability. She has been a pleasure to work with and I will miss her. She is not only an expert in her field, but she understands well the needs and desires of the membership. When we Editors or the Publications Committee have asked Ruth or her organization to carry out a task, we have always been able to count on the fact that not only the letter but the spirit of our intentions would be carried out on time, with no mistakes.

For those of us who attempt to handle substantial AIAA responsibilities while simultaneously fulfilling our obligations to full-time employers she has been superb. Without her directing the New York operation we would have found it necessary to invest far more time in our volunteer activity. The AIAA will not be the same without her.

In closing I need also to express my appreciation to one more group of people—our reviewers. A list of this past year's volunteers follows. Their collective effort represents a massive investment in the quality of this publication. Without them the system would not work and I thank them for their time.

Donald C. Fraser
Editor-in-Chief

Reviewers for *Journal of Guidance and Control*, September 1, 1978-August 31, 1979*
