

the recording of ethical standards for all participants of the journal publication process. Those guidelines are published in this issue and include the standards of conduct for authors, reviewers, and editors.

Also published in this issue is a description of the review process and the review form we use. I urge our reviewers to please keep the preceding criteria in mind when reviewing an applications paper. Please also assist us in our efforts to make the papers you receive more oriented toward applications. Each step in this direction will help.

Each year brings changes to our editorial team. This year Dr. Lincoln Wood is retiring after seven years of service to this journal. We greatly appreciate the counsel, time, and effort that Dr. Wood has invested on behalf of the journal. During this period, he has served for other societies, as well as on

technical committees. At one time during his tenure as Associate Editor he was also Chairman of the Astrodynamics Technical Committee. I wish him great productivity with the time that is being returned to his busy schedule. Succeeding Dr. Wood will be Dr. John Prussing of the University of Illinois. I welcome Dr. Prussing to the masthead and look forward to working with him on papers involving astrodynamics.

Finally, it is my pleasure once again to thank the reviewers for this journal. The following is a list of those of you who have helped us between October 1, 1988, and September 30, 1989. Without your efforts and cooperation this journal (or any other like it) could not operate. Your efforts are the essence of the review process and we appreciate it.

Donald C. Fraser
Editor-in-Chief

Reviewers for the *Journal of Guidance, Control, and Dynamics* – 1989

ATTENTION JOURNAL AUTHORS: SEND US YOUR MANUSCRIPT DISK

AIAA now has equipment that can convert virtually any disk (3½-, 5¼-, or 8-inch) directly to type, thus avoiding rekeyboarding and subsequent introduction of errors. The mathematics will be typeset in the traditional manner, but with your cooperation we can convert text.

You can help us in the following way. If your manuscript was prepared with a word-processing program, please *retain the disk* until the review process has been completed and final revisions have been incorporated in your paper. Then send the Associate Editor *all* of the following:

- Your final version of double-spaced hard copy.
- Original artwork.
- A *copy* of the revised disk (with software identified).

Retain the original disk.

If your revised paper is accepted for publication, the Associate Editor will send the entire package just described to the AIAA Editorial Department for copy editing and typesetting.

Please note that your paper may be typeset in the traditional manner if problems arise during the conversion. A problem may be caused, for instance, by using a "program within a program" (e.g., special mathematical enhancements to word-processing programs). That potential problem may be avoided if you specifically identify the enhancement and the word-processing program.

In any case you will, as always, receive galley proofs before publication. They will reflect all copy and style changes made by the Editorial Department.

If you have any questions or need further information on disk conversion, please telephone Richard Gaskin, AIAA Production Manager, at (202) 646-7496.
