

Journal of Hydronautics

VOLUME 3

JANUARY 1969

NUMBER 1

Reviewers for the Journal of Hydronautics, April 1, 1967–September 30, 1968

IT is indeed a pleasant task to acknowledge the diligent assistance rendered this Journal by the reviewers listed below. The care and thought given by the reviewers to the submissions to the *Journal of Hydronautics* have made a most significant impact on the final quality and organization of the papers published during this initial growth period of this new Journal.

Although it is not always possible to meet all the suggestions of reviewers, they may be assured that every reasonable effort to accommodate them is made. The papers are always improved as a result of their criticisms, which are nearly always welcomed by authors and editors.

For all your help, please accept our emphatic "well done!"

Survey Paper Awards to Be Repeated Next Year

At its meeting on October 23, 1968, the AIAA Board of Directors acted on a Publications Committee recommendation to authorize a second trial year for the four awards for the best survey papers in each of the AIAA journals (*AIAA Journal*, *Journal of Spacecraft and Rockets*, *Journal of Aircraft*, and *Journal of Hydronautics*). The winners of the first year's awards will be announced shortly by the Editors-in-Chief of the journals, and the awards will be presented at the 7th Aerospace Sciences Meeting in New York in January 1969.

The period for submission of papers for the second series of Survey Paper Awards will be October 1, 1968 through September 30, 1969. Like the current series, each award will carry an honorarium of \$750, which will be presented at the subsequent Aerospace Sciences Meeting in January. Judges will be the Editors-in-Chief and the Associate Editors of the appropriate Journal.

A competent survey paper is one which *critically* reviews all significant accomplishments in a given field, citing all prior pertinent literature. It thereby provides an informed basis from which the reader can proceed to his own evaluation of current activities in the field.
