

INNOVATIVE TISSUE MODELS FOR DRUG DISCOVERY AND DEVELOPMENT

U. GRAF-HAUSNER, K. MANIURA-WEBER, J.M. KELM, M.P. LUTOLF, M. TEXTOR, D.W. GRAINGER
(Editors)

This special theme issue of *Advanced Drug Delivery Reviews* was inspired by the current research activities from the platform of the Swiss Competence Centre Tissue Engineering for Drug Development and Substance Testing (TEDD). All members of the ADDR guest editorial team are linked to the TEDD competence centre (i.e., on the Advisory Board, Steering Committee or as an active TEDD partner). The present mix of topical reviews within this theme ADDR issue is assembled from top academic and industrial contributors in accordance with the TEDD network operational philosophy to combine priorities from basic research and industry. TEDD collects and exchanges knowledge and technologies in order to promote and accelerate development and routine applications of *in vitro* 3D cell culture concepts in the context of pharmaceutical, toxicological and medical innovation. By strengthening cooperation between TEDD partners in both basic and applied research, clinics and industry, the TEDD initiative seeks cover the entire development and value chain. www.icbc.zhaw.ch/tedd
