

# ADVANCED FUNCTIONAL MATERIALS

A futuristic, metallic, red and gold robotic hand is shown against a blue background. The hand is positioned diagonally, with the fingers slightly curled. A glowing blue cube is resting on the palm. The hand has a complex, segmented design with various mechanical details and a polished, reflective surface.

## WEARABLE DEVICES

On page 7273, H. S. Kang, H.-T. Kim, J.-K. Park, and S. Lee conceive a non-autonomic healing system, a light-powered, healable electrical conductor. The use of light allows remote access to the on-demand and repetitive restoration of its conductivity without a direct invasion of the master device, which is not accessible by other methods.
