INDEX

A

Archie's power law, 154
Axial dispersion model, 222

B

Ballistic packing, 152
Biology, 1–2, 6, 10, 38
Bubble growth, 165

C

Capillary condensation, 164, 174
Catalytic washcoat, 138, 193
Catalysis, 103, 105
Chord-length distribution, 145
CO oxidation, 192–193
Coarse graining, 2–3, 13–14, 21, 24, 30, 32, 35–37, 55–56
Correlation function, 144, 148, 150
Correlation length, 145
Covering radius, 148–149

D

Darcy's law, 156, 160, 179
Delaunay triangulation, 181
Deposition, 169
Discrete element modeling, 182, 187
Dissolution, 169
Dusty gas model (DGM), 159

E

Effective conductivity, 153
Effective diffusivity, 153, 155, 167, 176, 178
Effective permeability, 160
Effective scale, 159
Effective physical properties, 157
Electron microscopy, 138, 142, 145
Engineering, 63–65, 67–69, 71, 79, 87–88, 90, 92–93, 96
Equivalent network, 165, 179

F

Foam structure, 179
Formation factor, 155
Formation of Gas Cavities, 164
Fractal Porous Media, 173

G

Gaussian correlated random field, 150
Granulation, 190
Granule dissolution, 192
Growth, 2–3, 6, 10, 12, 15, 17–21, 25–31, 38, 40, 43, 46, 54–55, 58–60

H

Heterogeneous, 13, 26
Heterogeneous catalysis, 138, 140, 197
Hierarchical, 2, 9–10, 50–51, 53
Hybrid, 2, 6, 9, 12–26, 28–32, 35, 38, 40–44, 50–51, 54
Hyperbolic model, 222

I

Interfacial Flows, 161

K

Knudsen diffusion, 155, 159, 194

L

Level set method, 165, 202
Length scale, 138, 139, 142, 143, 195
Liapunov–Schmidt, 208
Loop reactor, 248
Low-dimensional models, 208

M

Macromixing, 242
Magnetic Resonance, 63–64, 125, 131
Materials, 1–2, 4, 6, 10, 12, 17, 23–25, 38, 46, 53
Mean transport-pore model (MTPM), 159
Metropolis rule, 147
Micromixing, 242
Microstructure, 140, 160, 166, 195–197
Molecular Dynamics Method, 170
Monte Carlo, 2–3, 10–11, 56, 59
Monte Carlo method, 138, 171
Morphogenesis of particles, 182, 187
Morphological descriptors, 143, 145
Multi-mode models, 217
Multigrid, 2, 8, 13–15, 18, 24–26, 28, 31–32, 38
Multiscale, 1–9, 11–21, 23–33, 35–41, 43–47, 49–57, 59, 61

O

Ostwald ripening, 168, 171

P

Parabolic model, 222
Phase function, 140, 141, 143, 146, 161
Phase transition of microstructure, 160, 162
Phase volume fraction, 143–144, 154–155
Poissonian generation of polydisperse spheres, 147
Pore size distribution, 142, 145
Pore-network diagram, 140, 142, 161
Porous catalyst carrier, 182
Porous polyolefin particles, 182

R

Reaction engineering, 64–65, 67, 101, 103, 112
Reconstructed porous media, 145, 151, 164, 174
Reconstruction of porous media, 146, 147
Recycle reactor, 249

S

Simulated annealing, 146, 151, 163, 179
Skeletonization, 145, 161
Solidification, 166
Spatial averaging, 208
Spinodal Decomposition, 167
Stiffness, 32, 35–36, 43
Stirred tank reactors, 256
Stochastic, 2, 6–11, 14, 16, 18, 23, 26–28, 32–38, 40–44, 46–49, 51–52, 54–56, 58
Structure-property correlations, 153, 157

T

Thresholding of correlated random fields, 149
Tubular reactor, 245

U

Unit cell, 141, 158

V

Virtual granules, 190
Volume of fluid method (VOF), 163, 181
Voronoi tessellation, 179, 181
Voxel, 141, 147, 163, 166, 169, 177, 180

W

Wet granulation, 190

Y

Young-Laplace equation, 165
