

CONTENTS

CONTRIBUTORS TO VOLUME 47 vii

Milk Protein Modification to Improve Functional and Biological Properties

Jean-Marc Chobert

I. Introduction	1
II. Chemical Modification of Milk Proteins	2
III. Enzymatic Protein Processing	37
IV. Genetic Engineering of Milk Proteins and Proteases	50
V. Conclusion	58
Acknowledgements	60
References	60

The Nutritional Significance, Metabolism and Toxicology of Selenomethionine

Gerhard Norbert Schrauzer

I. Introduction	74
II. Properties of Selenomethionine	74
III. Methods of Analysis	75
IV. Synthesis	77
V. Natural Occurrence and Biosynthesis	77
VI. Selenomethionine-containing Proteins and Enzymes	82
VII. Metabolism of Selenomethionine	86
VIII. Selenomethionine in Human Se Supplementation	91
IX. Se Yeast as an Animal Feed Supplement	92
X. Toxicity of Selenomethionine	94
XI. Selenium Requirements and Recommended Dietary Intakes	101
XII. Summary and Conclusions	102
References	102

***Echinacea* as a Functional Food Ingredient**

Clifford Hall III

I. Introduction	113
II. Phytochemical Constituents	117
III. Standardization, Quality Assurance and Regulations	144
IV. Biological and Toxicological Activities	148
V. <i>Echinacea</i> as a Functional Food Additive	161
VI. Conclusion	164
Acknowledgements	165
References	165

Bioactive Peptides and Proteins

Anne Pihlanto and Hannu Korhonen

I. Introduction	175
II. Bioactive Food Proteins and their Biological Functions	176
III. Bioactive Peptides Derived from Food Proteins	207
IV. Technological Processes for the Production of Bioactive Proteins and Peptides	237
V. Safety Implications	247
VI. Research Needs	248
References	249

Plant Products with Hypocholesterolemic Potentials

Pulok K. Mukherjee

I. Introduction	278
II. Phytoconstituents with Hypocholesterolemic Potentials	281
III. Herbs Useful in Hypercholesterolemia	298
IV. Conclusion	322
Acknowledgements	324
References	324
INDEX	339
