

Inside Cover

Hiroshi Tsujita, Yasuyuki Ura,* Shingo Matsuki, Kenji Wada, Takeaki Mitsudo, and Teruyuki Kondo*

Just as with the Chimera, a creature from Greek mythology that has the head of a lion, a goat, and a snake, three distinct monomers can be combined to make one molecule. In their Communication on page 5160 ff., T. Kondo, Y. Ura, and co-workers describe a series of ruthenium-catalyzed co-oligomerization reactions, including the cotrimerization of *N*-vinylamides with acrylates and ethylene, as a route to biologically and synthetically important enamides and dienamides.
