A yolk–shell structure ...

... with a distinctive core@void@shell configuration is synthesized using a facile vesicle template strategy. S. Z. Qiao, G. Q. Lu, and co-workers describe in their Communication on page 4981 ff. how the size of both core and shell are tunable. In addition, loading these mesoporous materials with gold nanocatalysts and their drug-release capability were investigated.

Inside Cover

Jian Liu, Shi Zhang Qiao,* Sandy Budi Hartono, and Gao Qing (Max) Lu*
