A protocell model ...

... can be prepared from an amino acid based supramolecular hydrogel assembled within phospholipid vesicles. In their Communication on page 9343 ff. S. Mann and co-workers show that these hydrogel vesicles undergo dynamic morphological deformation and are capable of autonomous movement through the reaction between platinum nanoparticles attached to their outer surface and H_2O_2 . The cover picture shows a “blueprint” image (complete with coffee ring stain!) outlining the design ideas behind their protocell model.

 WILEY-VCH

Inside Cover

Ravinash Krishna Kumar, Xiaoxiao Yu, Avinash J. Patil, Mei Li, and Stephen Mann*

A protocell model can be prepared from an amino acid based supramolecular hydrogel assembled within phospholipid vesicles. In their Communication on page 9343 ff. S.
