## Membranes containing metal–organic frameworks ...

... show great potential for enhancing the production of biofuel. As demonstrated by Y.-S. Li, W.-S. Yang et al. in their Communication on page 10636 ff., when incorporated into a polymer matrix, ZIF-8 nanoparticles provide preferential pathways for the permeation of organic compounds, and have resulted in a novel organophilic membrane for efficient pervaporative recovery of bioalcohols from fermentation broths.
