

Angewandte Corrigendum

The authors of this Communication have noticed that in the top panel of Figure 1 B the x axis on the plot (and inset) is erroneously offset by 80 nm: the x axis range of the main plot should be from 420 nm to 670 nm, instead of 500 nm to 750 nm. The plot (and inset) with the corrected x axis is shown below. All other results and conclusions of the paper remain unaffected.

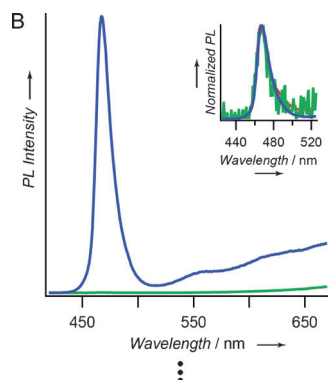

Figure 1. [...] B) Photoluminescence spectra of CdS nanorods (top), [...] obtained from hot injection (red), cation exchange (green), and post-exchange purification (blue). [...] Inset of B: Normalized photoluminescence showing similarity in the photoluminescence peak positions between samples obtained from the three different methods. [...]

Highly Luminescent Nanocrystals From Removal of Impurity Atoms Residual From Ion-Exchange Synthesis
