Self-assembled S-layer proteins ...

... forming the outer membrane on bacterial cells are shown; this rendition is based on AFM images of live *Lysinibacillus sphaericus* bacteria. In their Communication on page 4829 ff., L. R. Comolli et al. used graphene substrates to examine the structure and assembly of the growing S-layer boundary at high resolution by cryo-TEM. Image courtesy of Zina Deretsky (www.zina-studio.com) based on AFM images by Jinhui Tao, Lawrence Berkeley National Laboratory.
