The heat was on! ...

... In their Communication on page 5044 ff., P. Woisel, R. Hoogenboom, G. Cooke et al. describe the supramolecular host–guest interactions between a poly(*N*-isopropylacrylamide) copolymer with naphthalene side chains and the tetracationic macrocycle cyclobis(paraquat-*p*-phenylene), which enabled the development of a (re)programmable thermometer that memorizes the thermal history of the solution and provides an associated visible readout.
