## The catalytic redox-neutral arylation ...

... of ynamides with aryl sulfoxides is described by N. Maulide et al. in their Communication on page 8718 ff. This reaction is illustrated by the harmonious catalysis of a proton that joins the two reagents in an atom-economic manner. The background depicts the harmonious collaboration between the two institutions where this work was carried out: the Max-Planck-Institut für Kohlenforschung and the University of Vienna.
