The inhibition of monoacylglycerol lipase (MAGL) ...

... the enzyme responsible for the inactivation of the endocannabinoid 2-arachidonoyl-glycerol, is a strategy for the treatment of multiple sclerosis. In their Communication on page 13765 ff., M. L. López-Rodríguez and co-workers describe a potent, reversible, and selective inhibitor of MAGL that slows the clinical progression of multiple sclerosis without inducing undesirable CB₁-mediated side effect.
