## Crystallization by design ...

... enables the industrial synthesis of the hitherto expensive and throughput-limiting fragment (C14–C26) for the construction of the structurally complex marine natural product inspired breast-cancer drug Halaven. In their Communication on page 5108 ff., F. G. Fang et al. describe a number of stereoselective transformations on a crystalline polycyclic template derived from D-quinic acid (picture of *Halichondria okadai*: Prof. Uemura, Kanagawa University).
