## SYMPOSIUM ON ANIMALS, HORMONES, AGING AND CANCER

29 September 1990

*Department of Veterinary Medicine, University Centre 'De Uithof', Utrecht,  
The Netherlands*

Companion animals share man's living environment and they are kept until old age, which allows accurate observation of the development of diseases and the process of aging. In the last decades there has been an enormous proliferation and pathophysiological knowledge in these species and specifically in the dog and the cat. They form an important resource for pathogenic studies, in which not only similarities with man are of interest; sometimes a species-specific difference may be the key to progress. The symposium aims at the exchange of knowledge for physicians, biologists and veterinarians on two subjects:

- Endocrine and oncogenic effects of progestagens in animals and man.
- Aging and the hypothalamus–pituitary–adrenocortical system.

*Information* Scientific Committee AHAC, PO Box 80.154, 3508 TD Utrecht, The Netherlands.

## **ADVANCES IN INNOVATIVE ONCOLOGY: BIOMODULATION AND CHEMOIMMUNOTHERAPY**

*7 and 8 November 1991*

*Holiday Inn, Crowne Plaza, New York City*

Sponsored by The Chemotherapy Foundation, the Division of Medical Oncology and the Post-Graduate School of the Mount Sinai School of Medicine with Ezra M. Greenspan, MD as chairman.

Clinical investigators from major medical centers will report on clinical trials and practical applications of groundbreaking developments in biotechnology that are rapidly affecting cancer diagnosis and treatment. The presentations will cover colony stimulating factors, immune system stimulants, lymphokines, differentiating agents, toxicity modification, tumor markers, molecular genetics, hormonal interventions, various aspects of biomodulation and selected new phase II chemotherapy agents.
