

SUBJECT INDEX

- acyclovir, DNA polymerases, chain termination, 123
- acyclovir, herpes simplex, antiviral chemotherapy, bromovinyl deoxyuridine, nucleoside analogue, chemotherapy, 243
- acyclovir (topical), herpes simplex, recurrence, 135
- acylation, aldU (5'-amino-2',5'-dideoxy-5-iodouridine), herpes simplex virus, 319
- adenine arabinoside analogues, genital herpes, herpes simplex virus, 27
- adenine arabinoside, herpes simplex virus, encephalitis, cytarabine, 53
- aerosol, influenza, rimantadine, 147
- aldU (5'-amino-2',5'-dideoxy-5-iodouridine), acylation, herpes simplex virus, 319
- AMV infection, isonicotinic acid hydrazide (INH), metal complexes of INH, reverse transcriptase inhibition, inactivation, 291
- AMV reverse transcriptase, phosphonoformate, pyrophosphate analogues, inhibitors, 81
- antigenicity, mouse interferon, 155
- antipicornavirus, 2-(α -hydroxybenzyl)benzimidazole, LY122771-72, LY127123, 2-guandino-benzimidazole, 339
- antiviral chemotherapy, herpes simplex, bromovinyl deoxyuridine, nucleoside analogue, chemotherapy, acyclovir, 243
- ara-A, Virazole, ara-Hx, herpesvirus types 1 and 2, 203
- arabinosyladenine monophosphate, genital herpes, double-blind placebo-controlled study, 283
- ara-Hx, Virazole, ara-A, herpesvirus types 1 and 2, 203
- ara-T, ara-TMP, herpes simplex virus types 1 and 2, mouse encephalitis, 217
- ara-TMP, ara-T, herpes simplex virus types 1 and 2, mouse encephalitis, 217
- biochemical transformation, interferon, thymidine kinase, herpes simplex virus, hybrid plasmids, LM(TK⁻) cells, 301
- bromovinyl deoxyuridine, herpes simplex, antiviral chemotherapy, nucleoside analogue, chemotherapy, acyclovir, 243
- capping, E₁ monoclonal antibodies, Sindbis virus, 191
- chain termination, DNA polymerases, acyclovir, 123
- chemotherapy, herpes simplex, antiviral chemotherapy, bromovinyl deoxyuridine, nucleoside analogue, acyclovir, 243
- chromosome 21, immune interferon, trisomic-21 cells, 97
- combination chemotherapy, dengue virus, 6-mercapto-9-tetrahydro-2-furypurine, ribavirin, 69
- cyclosporin A, natural resistance, herpes simplex virus, 3
- cyclosporin A, natural resistance, herpes simplex virus, 13
- cyclosporin A, interferon, 361
- cytarabine, herpes simplex virus, encephalitis, adenine arabinoside, 53
- dengue virus, combination chemotherapy, 6-mercapto-9-tetrahydro-2-furypurine, ribavirin, 69
- deoxyglucose, glycoproteins, inhibition of glycosylation, tunicamycin, glucosamine, dolichol pathway of glycosylation, 177
- DNA polymerases, acyclovir, chain termination, 123
- dolichol pathway of glycosylation, glycoproteins, inhibition of glycosylation, tunicamycin, deoxyglucose, glucosamine, 177
- double-blind placebo-controlled study, arabinosyladenine monophosphate, genital herpes, 283
- (E)-5-(2-bromovinyl)-2'-deoxyuridine, 5-substituted-2'-deoxypyrimidine nucleosides, herpes simplex virus strains, structure-activity relationship, pseudorabies virus, 41

- (*E*)-5-(2-bromovinyl)-2'-deoxyuridine, herpes simplex virus strains, primary rabbit testes cells, plaque inhibition assay, herpes encephalitis in mice, 255
- E₁ monoclonal antibodies, Sindbis virus, capping, 191
- EMC virus, interferons, herpes simplex virus, synergism, 2-5A synthetase, protein kinase, 227
- encephalitis, herpes simplex virus, adenine arabinoside, cytarabine, 53
- ganglioside, interferon types β and γ , glycophorin, 161
- genital herpes, adenine arabinoside analogues, herpes simplex virus, 27
- genital herpes, arabinosyladenine monophosphate, double-blind placebo-controlled study, 283
- glucosamine, glycoproteins, inhibition of glycosylation, tunicamycin, deoxyglucose, dolichol pathway of glycosylation, 177
- glycophorin, interferon types β and γ , ganglioside, 161
- glycoproteins, inhibition of glycosylation, tunicamycin, deoxyglucose, glucosamine, dolichol pathway of glycosylation, 177
- 2-guanidino-benzimidazole, antipicornavirus, 2-(α -hydroxybenzyl) benzimidazole, LY-122771-72, LY127123, 339
- herpes encephalitis in mice, (*E*)-5-(2-bromovinyl)-2'-deoxyuridine, herpes simplex virus strains, primary rabbit testes cells, plaque inhibition assay, 255
- herpes simplex, acyclovir (topical), recurrence, 135
- herpes simplex, antiviral chemotherapy, bromovinyl deoxyuridine, nucleoside analogue, chemotherapy, acyclovir, 243
- herpes simplex virus, cyclosporin A, natural resistance, 3
- herpes simplex virus, cyclosporin A, natural resistance, 13
- herpes simplex virus, adenine arabinoside analogues, genital herpes, 27
- herpes simplex virus, encephalitis, adenine arabinoside, cytarabine, 53
- herpes simplex virus types 1 and 2, ara-T, ara-TMP, mouse encephalitis, 217
- herpes simplex virus, interferons, EMC virus, synergism, 2-5A synthetase, protein kinase, 227
- herpes simplex virus, biochemical transformation, interferon, thymidine kinase, hybrid plasmids, LM(TK⁻) cells, 301
- herpes simplex virus, AIdU (5-amino-2',5'-dideoxy-5-iodouridine), acylation, 319
- herpes simplex virus strains, (*E*)-5-(2-bromovinyl)-2'-deoxyuridine, 5-substituted-2'-deoxypyrimidine nucleosides, structure-activity relationship, pseudorabies virus, 41
- herpes simplex virus strains, (*E*)-5-(2-bromovinyl)-2'-deoxyuridine, primary rabbit testes cells, plaque inhibition assay, herpes encephalitis in mice, 255
- herpes simplex virus type 1 proteins, nucleoside analogues, 267
- herpesvirus types 1 and 2, Virazole, ara-A, ara-Hx, 203
- humoral antibodies, viral subunit vaccines, rubella, virosomes, 347
- hybrid plasmids, biochemical transformation, interferon, thymidine kinase, herpes simplex virus, LM(TK⁻) cells, 301
- 2-(α -hydroxybenzyl)benzimidazole, antipicornavirus, LY122771-72, LY127123, 2-guanidino-benzimidazole, 339
- immune interferon, chromosome 21, trisomic-21 cells, 97
- inactivation, isonicotinic acid hydrazide (INH), metal complexes of INH, reverse transcriptase inhibition, AMV infection, 291
- influenza, aerosol, rimantadine, 147
- influenza, respiratory epithelium, secretory antibody, local immunity, 115
- inhibition of glycosylation, glycoproteins, tunicamycin, deoxyglucose, glucosamine, dolichol pathway of glycosylation, 177
- inhibitors, AMV reverse transcriptase, phosphonoformate, pyrophosphate analogues, 81
- interferon, biochemical transformation, thymidine kinase, herpes simplex virus, hybrid plasmids, LM(TK⁻) cells, 301
- interferon, cyclosporin A, 361
- interferons, EMC virus, herpes simplex virus, synergism, 2-5A synthetase, protein kinase, 227

- interferon, pharmacokinetics, 103
- interferon, retroviruses, reverse transcriptase, 167
- interferon types β and γ , ganglioside, glyco-phorin, 161
- interferon, vaccinia virus, rhesus monkey, 313
- isonicotinic acid hydrazide (INH), metal complexes of INH, reverse transcriptase inhibition, AMV infection, inactivation, 291
- Japanese encephalitis virus (JEV), vaccine, pigs, 335
- LM(TK⁻) cells, biochemical transformation, interferon, thymidine kinase, herpes simplex virus, hybrid plasmids, 301
- local immunity, respiratory epithelium, influenza, secretory antibody, 115
- LY122771-72, antipicornavirus, 2-(α -hydroxybenzyl)benzimidazole, LY127123, 2-guanidino-benzimidazole, 339
- LY127123, antipicornavirus, 2-(α -hydroxybenzyl)benzimidazole, LY122771-72, 2-guanidinobenzimidazole, 339
- 6-mercapto-9-tetrahydro-2-furypurine, combination chemotherapy, dengue virus, ribavirin, 69
- metal complexes of INH, isonicotinic acid hydrazide (INH), reverse transcriptase inhibition, AMV infection, inactivation, 291
- mouse encephalitis, ara-T, ara-TMP, herpes simplex virus types 1 and 2, 217
- mouse interferon, antigenicity, 155
- nucleoside analogue, herpes simplex, antiviral chemotherapy, bromovinyl deoxyuridine, chemotherapy, acyclovir, 243
- nucleoside analogues, herpes simplex virus type 1 proteins, 267
- natural resistance, cyclosporin A, herpes simplex virus, 3
- natural resistance, cyclosporin A, herpes simplex virus, 13
- pharmacokinetics, interferon, 103
- phosphonoformate, AMV reverse transcriptase, pyrophosphate analogues, inhibitors, 81
- pigs, Japanese encephalitis virus (JEV), vaccine, 335
- plaque inhibition assay, (*E*)-5-(2-bromovinyl)-2'-deoxyuridine, herpes simplex virus strains, primary rabbit testes cells, herpes encephalitis in mice, 255
- primary rabbit testes cells, (*E*)-5-(2-bromovinyl)-2'-deoxyuridine, herpes simplex virus strains, plaque inhibition assay, herpes encephalitis in mice, 255
- protein kinase, interferons, EMC virus, herpes simplex virus, synergism, 2-5A synthetase, 227
- pseudorabies virus, (*E*)-5-(2-bromovinyl)-2'-deoxyuridine, 5-substituted-2'-deoxypyrimidine nucleosides, herpes simplex virus strains, structure-activity relationship, 41
- pyrophosphate analogues, AMV reverse transcriptase, phosphonoformate, inhibitors, 81
- recurrence, herpes simplex, acyclovir (topical), 135
- respiratory epithelium, influenza, secretory antibody, local immunity, 115
- retroviruses, interferon, reverse transcriptase, 167
- reverse transcriptase, interferon, retroviruses, 167
- reverse transcriptase inhibition, isonicotinic acid hydrazide (INH), metal complexes of INH, AMV infection, inactivation, 291
- rhesus monkey, interferon, vaccinia virus, 313
- ribavirin, combination chemotherapy, dengue virus, 6-mercapto-9-tetrahydro-2-furypurine, 69
- rimantadine, aerosol, influenza, 147
- rubella, viral subunit vaccines, virosomes, humoral antibodies, 347
- secretory antibody, respiratory epithelium influenza, local immunity, 115
- Sindbis virus, E₁ monoclonal antibodies, capping, 191
- structure-activity relationship, (*E*)-5-(2-bromovinyl)-2'-deoxyuridine, 5-substituted-2'-deoxypyrimidine nucleosides, herpes simplex virus strains, pseudorabies virus, 41
- 5-substituted-2'-deoxypyrimidine nucleosides, (*E*)-5-(2-bromovinyl)-2'-deoxyuridine, herpes simplex virus strains, structure-activity relationship, pseudorabies virus, 41

synergism, interferons, EMC virus, herpes simplex virus, 2-5A synthetase, protein kinase, 227

2-5A synthetase, interferons, EMC virus, herpes simplex virus, synergism, protein kinase, 227

thymidine kinase, biochemical transformation, interferon, herpes simplex virus, hybrid plasmids, LM(TK⁻) cells, 301

Trisomic-21 cells, chromosome 21, immune interferon, 97

tunicamycin, glycoproteins, inhibition of glyco-

sylation, deoxyglucose, glucosamine, dolichol pathway of glycosylation, 177

vaccine, Japanese encephalitis virus (JEV), pigs, 355

vaccinia virus, interferon, rhesus monkey, 313

viral subunit vaccines, rubella, virosomes, humoral antibodies, 347

Virazole, ara-A, ara-Hx, herpesvirus types 1 and 2, 203

virosomes, viral subunit vaccines, rubella, humoral antibodies, 347
