

Preface — 10th Anniversary Special Issue

This issue of *Applied Organometallic Chemistry* consists of contributions from members of the Editorial Board of the Journal, and represents a special issue denoting our ten years of publication since January–February 1987. Since then, the Journal has grown from six to twelve issues annually.

I want to thank my colleagues not only for responding to the idea of a special issue so willingly, but also for their help over these ten years. I can't easily put into words in the context of a primary journal how much I appreciate the help and friendship of these colleagues over that time; I would, though, express a special thank you to the following contributors: Renato Barbieri, Y. K. Chau, Bill Cullen, Roy Harrison, Friedo Huber, Kurt Irgolic, Dietmar Seyferth and Jim Weber, who have papers in this issue and who were on the Editorial Board at the time of the first issue.

I hope the Journal has performed a useful service to the organometallic community during the past ten years and I hope we can look forward to being of further assistance in the future. Thank you for all your help.

PETER CRAIG
