100th 39,802

ome of you may be wondering about our ABC figures at the bottom of this page. How is it, in a world of declining Amiga use and with other magazine sales dropping by as much as 37 per cent, that we have managed to add about 47% to our readership figures just like that? The answer's simple really. Not only are we the best Amiga magazine on the market with exclusive reports brought to you before anyone else on things like the new Amiga, the stories in this issue about VisCorp buying Amiga Technologies, and NewTek's LightWave announcement and so on, we are also unique in the fact that we have two editions, one for Europe and one for the American market. The reason for our increased ABC is our loyal American and Canadian readers who rely on us to bring them the up-to-date news, reviews and features every month that we bring to the rest of the world.

THE TRUTH But why do our readers like us? Well, as

always you can rely on Amiga Computing to tell you the truth about a product. Just because the market is shrinking, it doesn't mean we will puff products against our better judgement, after all, it is you, our readers, to whom we are responsible and you won't trust a magazine's judgement if you buy a product we have said is perfect and it turns out to be a bit mince.

We also appeal to the more mature

Double the readers Double the fun

serious Amiga owner. The kind of chap, as our survey reveals, that spends more time using 3D packages than playing games, that almost certainly has a hard drive and CD-ROM. This sort of person doens't enjoy being talked down to and we strive not to do that.

So here we are, poised on the brink of yet another chapter in the Amiga's chequered career, with VisCorp announcing that they will continue to support existing Amiga markets and develop new ones, pretty much the same stories we heard from Escom last May We'll have to wait and see, as usual, but at least Don Gilbreath, one of the head honchos at VisCorp, was the designer of the CD32, so he has more pedigree than most of the current Amiga Technologies team. And this time there shouldn't be any of the delays in production of new machines, because, as we understand it. VisCorp are buying Amiga Technologies lock, stock and barrel, so they won't have to find a factory to produce Amigas which will need to be retooled and

Perhaps VisCorp might may also attract back some of the real Commodore talent from their posts at other companies. Names like Dave Havnie. Mike Sinz. Peter Cherna et al, would be the ones best suited to breathing life back into our favourite machine in a

The very first issue of Amiga computing note the the printing error on the masthead

way that Amiga Technologies, through no particular fault of their own, have failed to

From reading IRC transcripts and attending conferences we know that there is still an awful lot of potential in the Amiga yet. Other platforms have shown the way forward perhaps, but there is still time for our machine to rise from the ashes of Commodore and Escom and renew itself. phoenix-like as the machine for artists and multimedia types the world over. We know there is a market out there from our reader survey. We know you are now more clued up than ever, and we know that you are sticking with the Amiga because it is still the best machine for your current computing needs. Let's stick out the year and see the looks of disbelief surface on the faces of those fairweather Amiga owners who ditched everything they knew for a personality-free PC when VisCorp show a PowerAmiga at next year's CeBit show.

HOCK ACQUISITION OF AMIGA TECHNOLOGIES BY VISCORP

Just as we were going to press, Amiga Computing learnt of the shock announcement that Escom were to sell Amiga Technologies to VIScorp, developers of set-top box technology. A binding letter of understanding has been signed between the companies and it states that VIScorp would acquire Amiga Technologies. including the intellectual properties of the Commodore Business Machines. The transaction value is around \$40 million - \$10 million more than Escom bought Commodore for just over a year ago. The acquisition is subject to approval by both companies' board of directors and terms were not disclosed.

Gilles Bourdin, PR Manager for Amiga Technologies explained: "We have changed Mother companies because of the financial position of Escom. They were not in a position to hold Amiga Technologies and so we have a found a company that are more development-orientated - an Amiga-oriented company." When asked whether this is definite he commented: "We are quite sure this is going to happen." In January, Escom posted losses of 72 DM million and in March they revised that to 125 DM Million

Although primarily the acquisition is to give VIScorp full access to Amiga Technology for its set-top box, they have stated that support of the A1200 and

The Surfer Pack - ready at last?

A4000 will continue Helmut lost now Chief Executive of Escom AG (see separate story) commented: "ViScorp anticipates the support of ongoing European sales of popular models such as the A4000T and the A1200 as well as the current developments and future releases of Amiga Technologies.

At the press conference at the World of Amiga show, they outlined their plans further.

William Buck, VIScorp's CEO, commented on the rumoured offer of \$40 million when ex-Commodore man, Helr Escom bought Amiga Technologies for only \$10 million, "People are saying that these guys are crazy...remember though that

money was spent subsequently. What we are buying is an asset. An asset that involves the inventory of finished goods, inventory of components which we can use to do what was being done but we can also use them to do what we want to do. Plus we're getting the intellectual properties. We think we're getting a great deal." VIScorp were present at the original auction for Commodore.

Petro Tyschtschenko offered: "This procedure is not affecting our day to day business, on-going projects, or my position as president of the company."

It was also stated that the distribution deal already in place with Escom when the original licensing agreement was signed was still in place. The preposed time scale for development is projected to be the end of 1996 for Universal Internet Television Interface for the US and the UK and the full set-top box with genlock and card-swipe for 1997. We'll bring you a full report of World of Amiga and more on the VIScorp deal next month.

Manfred Schmitt, Escom's CEO, has quit the board and has been costsion and he left his position on 31 March. However, he is still with the company in the role of consultant. Jost has been head of IBM's German PC business since November

but previous to that he was Managing Director of Comof Vice President International. In 1993 he accepted a post on the bard of ESCOM AG where he was responsible for the Sales and arketing functions and for the management of subsidiaries. Amiga Computing spoke to Gilles Bourdin, PR Manager for the

ry, about the recent events. He confirmed Schmitt had quit the tschenko was also leaving. More news from Amiga Technologies nonth is that the Internet pack is *finally* ready. According to lin, the software and the modem are finished, and the d own to the fact that each country needed a different mor om agreements varied between each country

HOTOGENICS 2 TO LAUNCH

A Imathera have revealed that their much anticipated Photogenics 2 package is about to be released. As a follow-up to their highly successful graphics package, it contains many new features - so much so that they have put it on CD-ROM. They have included Animation support to load and save standard IFF Anim files, powerful ARexx scripting where you can create macro scripts to automate conversion, build animations or interface with other Amiga software. This also allows Photogenics 2 to link directly to LightWave 3D.

A new full-screen Effects system has also been incorporated and provides many new effects that you can apply to a complete

image or a masked area. You can write you own effects but those included are Radial Blur, Warp, 3D Rotate and 32-bit Fractal generator. Another new feature is their Virtual Buffers which means you can work with images larger than your memory will allow. Almathera claim this is 'unique' because it allows this without the speed loss usually associated with virtual memory programs. Hypertext On-line help is provided on the CD-ROM in HTML format, and a Web browser is also included. The price is expected to be around £99.95.

Manfred Schmitt (pictured) quits

Escom board. He is replaced by

Almathera can be contacted on 0181-687 0040, or e-mail almathera@cix. compulink.co.uk

IGHTWAVE 5 ON THE HORIZON

N ewTek took the opportunity given to them at NAB to announce the latest version of LightWave. The best news is that Modeler is to receive a much needed update, with tools to bring it in line with the current range of state-of-the-art CGI programs. Modeler has been neglected in comparison to Lavout, with only Metaform being of any note as an update in recent revisons. LightWave 5 is set to change all that with several new ground-breaking features. Firstly, there is MetaNurbs, and LightWave is the first product with this feature. It breaks the barrier between spline-

based modelling and traditional polygons by automating the transition between the two. Another feature much loved by 3D Studio users is MetaBalls which will be included directly in Modeller (rather than having to be a plug-in, as in 3D Studio), MetaBalls is a system that is fairly hard to explain in a few words, but allows for the kind of 'elobby' effects as seen in the Organics advert on TV. In addition to over 100 new features for both Lavour and Modeler, LightWave 5 also promises full integration with OpenGL a graphics system for realtime shaded views in Layout, and, presumably (they didn't say on the press release), Modeler. But where will that leave Amiga owners who won't have access to OpenGL? NewTek don't say, but the PC version will be the first available, with Alpha. MIPS and SGI to follow. The pricing will be \$1495 for the full version, and upgrades will cost \$495 from any previous version.

omega have announced that shipment of their Zip Drives has passed the One Million mark. In an announcement at the CeBIT trade show in have shipped more than one million Zip drives in less than a year and also shipped nearly tenmillion Zip disks

The Ismana Tie Drive has shipper over one mil

RAM IT HOME

Trade paper CTW has reported that companies are being targeted by RAM raiders'. Computer thieves are breaking into the companies and stealing thousands of pounds worth of memory boards and other equipment. Codemasters are the latest victim of the bberies and want other companies to ke note and put up protection against

LIVE '96 AND KICKING

The Consumer Electronics Show is all set to happen at Earls Court, London, in September, Scheduled for the 25-29 of the month, companies such as Sony, Demon Internet and Mitsubishi have already signed up. The show also plays host to the Battle of the Bands contest as well as the latest in games.

OPE FOR LEISURESOFT

holesalers Leisuresoft hope to see off current difficulties by going into administration, it was announced recently. The company are reported to be having financial troubles but according to the joint administrator, Bob Bailey, they are giving out a "business as usual" message. Trade paper CTW said that 12 staff have been made redundant, leaving a workforce of about 60. The administrator commented that people had expressed an interest in buying the company but they had no intention of putting it up for sale.

Leisuresoft are one of only two Amiga distributors, the other being SDL SDL also fell into problems back in October and went into Administration, to be bought out only four weeks later by Anglo Corporation. No-one from Leisuresoft was able to comment at the time of going to press what implications this would have for the future of their Amiga line

PREMILIM PPINT

Kodak have announced a new range of Photographic Paper and Transparency Film designed to get the best results from deskton link Jet printers. They are offering superior grades of photographic-quality A4 paper and transpare nov film which is ideal for producing high quality print-outs in vivid colour or black and white. They will enhance the quality of documents or overheads by making accurate graphics, solid colour saturation and crisp text

REAL GEMS

Gillet Multimedia, the company behind the 'Little Gem' Desktop Micro Audio Mixer and EQ Unit. have announced that due to the success of the unit they have reduced the price. Originally retailing at 669.95 they have knocked this down to £49.95. Launched last summer, the unit has sold in its hundreds all around the world - it even earned itself a 9 out of 10 score from Amiga Computing, For more information contact Gillett Multimedia on 01353 669203.

TERMINIS TERMINATED

According to rumours circulating on the Amiga Terminus is no longer being developed. Apparently the author, Jack Radigan is considering a port to OS/2 but is waiting to see if the BeBox becomes a player.

JOIN THE CLUB

A new Amiga computer club has opened in Highgate Road, UpHolland, Wigan. The club meetings are held every Sunday at 1pm. admission is £1.50, and members can benefit from free advice, free software and a huge Public Domain library totalling 18Mb of software. Refreshments are also available. If you're Interested and can actually get out of bed on a Sunday before 1pm, take along your Amiga and get computing.

Hugh Poynton

new solution has emerged in Japan to the age old problem of how to train motorbike riders without actually exposing them to too much danger on the open

Virtuality KK, a subsidiary of Virtuality Group plc, have announced that they have completed the development of a motorbike simulator for use in driving schools in Japan. The completion of the simulator has coincided with the Japanese Police's decision to revise the traffic law so that simulators will have to be used as part of the teaching programme, particularly for candidates of bikes over 400cc.

Virtuality KK expect to make massive profits on the motorbike simulator as the market is estimated to be about US \$50 million and the only other company known to be

Screamer, EF2000 and NHL Hockey '96 have been nominated for Computer game of the Year. We'll keep you posted...

working on a bike simulator is Honda. The real advantage of the simulator is the fact that it can allow student drivers to drive in hazardous conditions without fear of injury. Dangers such as difficult weather conditions, busy roads, and pedestrians walking out in front of them will enable them to experience the worst they could expect to come across on the open road, and to learn from their experiences.

Rather than use a flat screen, the simulator makes use of a Visette' Head Mounted Display through which the student sees detailed real time 3D graphics. According to Mr Terushisa Tajima, HMD is used because "...it is the only way to ensure that students turn their heads left and right before they make a turn at an intersection."

AMA SANDWICH

Hama have announced that they have taken over the distribution of Videonics. This gives them the largest range of Post Production Product available from any UK supplier.

ROADCAST INDIAN '96

he Broadcast India '96 Exhibition and Symposium will be held from the 24-26 October at the World Trade Centre, Bombay. The exhibition covers all aspects of TV, Radio, Video, Audio, Film, Cable, Satellite, Computer Graphics, Multi Media, Transmission, and many other associated technologies.

India's broadcasting industry is flourishing after the privatisation of channels and the arrival of the international networks in India. With 80 channels expected to exist in India within the next year, it is thought that the Indian

broadcasting industry will require over 1,000,000 hours of TV programmes per year. Such a huge boom in the broadcasting business means India currently needs 50 times more hardware and technology for its existing and new facilities, making one of the largest markets for broadcast hardware and also computer software.

Anybody interested should contact Saicom Trade Fairs & Exhibitions PVT. Ltd at phone: (91-92) 2151396, 2152721 or fax: (91-92) 2151269

Nova acquire Aladdin 4D

t used to be that there were two major rendering packages on the Amiga – Impulse's Imagine on the lower end, and NewTek's LightWave on the upper end. Contenders have rome and come About a year ago Maxon's Cinema4D ont an English translation and its low cost and high power set the market astir. It's just got quite a bit hotter.

Nova Design, renown the world over for their high-end image processor ImageFX, have acquired Aladdin 4D from Adspec Programming. While Aladdin 4D has never actually gone out of production, its interface and features are currently going through a major overhaul by Nova Design programmers. Previous to Nova's acquisition, Aladdin 4D was often noted for powerful animation control and its ability to create realistic vapors, clouds, and gasses. An old competitor has returned to stake its claim on the high-end, low-cost rendering market.

Nova Design intend to release Aladdin 4D 5.0 in the third quarter of 1996, but a price has not yet been determined. For more information on Nova Design, ImageFX, or Aladdin 4D, you can reach Nova Design by phone on (001) 804-282-5868, by fax on (001) 804-282-3768, by e-mail at kermit@cup.portal.com, or on the Web at http://www.portal.com/~kermit/

realistic images like this one is easy with Aladdin 4D Will it be Design?

NEW SETUP

World Construction Set the package that into realistic landscapes, has reached a new version. Questar Productions have decided to put out a 'pre-release' version, without all the features fully implemented and fixed. The pre-release will be less expensive than the full package, and all a free upgrade upon its completion.

While Questar produce WCS for other platforms, the price of WCS on the Amiga will be lower than their versions of WCS 2. WCS V2 allows timeline editing of animations, a configurable MUI interface, better waves and water control, multiple DEM files in a single project, and compatibility with LightWave through an import filter. WCS V2 Pre-release is shipping now, and dealer and distributor inquiries are invited

Questar Productions can be reached on (001) 303-659-4028, wcsinfo@arcticus burner.com through e-mail, and http:// www.dimensional.com/~questar on the

ANDITS ON THE WEB

Dan Barrett, better known to Amiga users for turned from biting sarcasm to somewhat more serious subject matter. His new book from O'Reilly and Associates, entitled 'Bandits on the Information Superhighway, deals with Internet risks, scams, and hoaxes. Barrett deals with security issues, junk e-mail, and other concerns, and works to debunk the myth that the Net is strictly a playground for paedophiles and perverts.

'Bandits' can be found at many bookstores, or can be ordered under ISBN 1-56592-156-9. For more information, you can reach O'Reilly and Associates at (001) 707-829-0515, or read a chapter of the book at http://www.ora.com/info/bandits/

NTERNET FOR THE NORTH

AGAIN FOR BUSINESS

The Wonder Computers chain of Amiga retail stores went into bankruptcy in late January, but Wonder CEO. Mark Habinski, publicly promised the Amiga community Wonder as possible and re-establish it as a new, debt-free corporation. This has been done.

On 1 May, Wonder Computers International opened their first store and corporate headquarters in Ottawa, Conada. Habinski's bids for the two largest Wonder locations, as well as for the physical capital of the corporate headquarters and the trademarks and rights to the Wonder name, were accepted by the bankruptcy trustees. Keynes Emeruwa, former Marketina Manager of WCi, said of the return of Wonder: "We are more excited now than ever before. We're looking forward to working resurrection is a testament to the success of the Amiga."

Wander's initial two locations will be the home store and corporate headquarters in Ottawa, with a sales office in Vancouver, British Columbia, and expansion is planned for the city of Toronto as soon as possible. In addition, two western Wonder stores whose assets were acquired by a former Wonder manager may become affiliated with the new company. While the planned World of Amiga Vancouver in June will not be possible. Habinski has indicated that World of Amiga Toronto in December will still be held, and that a date will be

EXTRACTING COVERDISK FILES

Before you even think of purting the Coverdisks anywhere near your Computer you should make sure you write protect them by moving the black tab in the top corner of the disk, so you can see though the hand. On the properties of the hand of the hand of the hand of the your disks is any way. There is no reason why the coverdisks need to be written to, so even if the computer asks you to write enable the disks, don't do it. To extract any single archive, sinply double-click its iron and follow the on-screen instructions. If you to EAM, exlect the NOVICE fixed on the welcome screen and press proceed once on the current screen, and then again on the next. The

need further installing, so read the documents on how to do this. HARD DRIVE USERS

Hard drive users do not have to boot with the first disk, but you must make sure you have the Amige's Institute program in your clauser. To make sure your hard drive has the concert files in place, double-click on the Setuptibl icon. This will check if you have the Installer program and it not will copy it decroes — don't done you copy it decroes — don't done you copy it decroes — don't done you have to be a support of the program and it not will copy it decroes — don't don't you have the program and it not will find the program and it not will be a find the program and it not will be a find the program and it not will be a find the program and it not will be a find the program and it is not a support to the program and it is supported by the program and t

When you run MultiExtract you will be presented with a number o check boxes, each representing one of the programs on that coverdisk Just de-select all the programs you do not want extracting and their press proceed. All the selected programs can now miraculously but found in the selected destination.

Its huge, a 4Mb demo of StormC. A complete C/C++ development environment for the Amiga

DISK 1

INSTALLING STORMC

Storm is not a small grogam as it gives the programmer a complete C/C++ development environment. The total amount of had offer space required a smoot adult installation to a matter of a few mouse clicks on the installation control and the small programment of the small programmer and the small p

With the StormC demo there are two example programs that you can compile and run. To load them, click on the open project icon and go to the Examples directory. There are two projects already setup for you. One creates a demo Gadtool interface and the other makes use of the Amigs's BOOPSI colour wheel.

Select one and once it is loaded click on the run icon to compile and run the program. This will show you Stormc running through its compile and link sequence, and then the debugger that works alongside the compiled program.

StormC's advanced debugger allows you to keep track of what your

STORME Author: Haage & Partner Computer Workbench 2.04. 4Mb Hard Drive Space

The program editor

compiler for both parties. The traditional programmers will use our very fast and compatible ANSI C compiler, and they can switch to object-oriented programming with C++ at any time, completely or partially, StormC is their tool for the future. The others will use the outstanding C++ compiler. StormC implements C++ according to the design by Biarne Stroustrup and it supports the extended AT&T 3.0 standard. The compiler generates code for all Motorola 680x0 CPUs including the 68060.

StormC is suitable for all programming projects, be they administrative, graphics, music or game programs. For all these proiects StormC should be your first choice. The existing preview version of StormC helps you with the decision for your future compiler. system.

huge gap was left in the Amiga market. There was no commercial C compiler, and as SAS C never gain object-oriented extensions, this left the Amiga lacking a very important product. StormC looks like it can

very easily fill SAS C's boots. The heart of StormC is the project manager, from which all other components are invoked and are provided with data. The project manager is not simply a better MAKE, but the administrator for all your program modules such as sources, object libraries, documentation, ARexx scripts, pictures and resources, along with compiler,

editor and project options. A further component of the system is the editor, with its ability to emphasise keywords and syntax characteristics colourfully. With this text colouring you can read your program much easier because you will be better able to see its structure. Apart from this it also helps you avoid errors while editing your sources. As soon as a keyword or an Amiga function is entered, the word is marked colourfully and you know you completed it correctly.

Next is the extraordinary debugger, extraordinary because it makes no difference whether the editor or the debugger is running. The debugger uses the abilities of the adtor which means that the debugger uses the editor window for its output. Therefore, you can watch the source, set breakpoints, look for functions and variables and so on

FAULTY DISKS

If you should find your Amiga outing CoverDisk damaged or faulty, please return it to:

with the ease of using the editor. The structuring and the colouring of the source are helping you to do your debugging job.

The most important part of our development system is the compiler. Object-oriented programming is all the rage. Hardly any software developer programs in ANSI C anymore, at least that's the impression I get. The truth, however, is quite the opposite. While many programmers use C++ compilers, these are suited just as well for translating ANSI C code. StormC is a

To use the following program you need to have the Magic User Interface v3 installed on your system. Without it you will not be able to run any MUI program. MUI is

available from any good PD house. CLASSACTION V3

Author: Gasmi Salim Workbench 2.04 Magic User Interface v3.x

For version 3 ClassAction has gone MUI mas

This is a great program that makes your life a lot easier. When you have a hard drive you end up with all manner of files dotted around, and if you had to have every program necessary to display all these different files you would not have very much room on your Workbench.

ClassAction lets you define a whole host of different file types such as GIF, Jpeg, ILBM or any other file you like and specify the program that should display it, leaving you with a single Applcon on your Workbench. If you want to display a picture then you only have to drop the picture file into the Applcon and the corresponding picture viewer will be run.

Once you have installed ClassAction using the provided installer you can run the preference program. As standard there are a good number of predefined file types, but you will have to change the pre-set programs to your

ClassAction has a number of handy features that make it very good to use. Firstly, for each file type you define you can have many different actions, so when you drop a file onto the Applcon you get a list of the options you specified. Therefore, for Jpegs you could have normal and grey preview options if you use Fastview.

When it comes to adding new file types, ClassAction gives you a few options, the first is that you can simply define a file name extension, such as #?.jpg to define a Jpeg file. This is not particularly good because any Jpeg file that does not end in .jpg will not be recognised by ClassAction.

The second way is to define the internal structure of a Jpeg file. If you want to know every Jpeg file has the word JFIF six bytes into the file you enter 6,'JFIF' which tells ClassAction to look at the 6th byte in a file and if it matches JFIF then it is a Jpeg. If you do not fancy doing this yourself then ClassAction has the ability to work this out itself. If you pass it a few files of the same type it can analyse them, see what is the same in all of them, and work out how to recognise them in the future.

EASY ASSIGN Author: Piotr Cienak

If you are the sort of person that likes a neat and tidy hard drive with as few extra icons and files dotted ground as possible then this could be of use to you. If you install a game on your hard drive.9 out of 10 times you have to set up some assigns - usually the name of the disks

you are copying the game off. This means you have to create a separate script file to do all the assigns and run the program Easy Assian lets you make these assigns from the icon you run the game from which allows you to keep things a little more in order. To use Easy Assian, copy it to your C directory from where it can be run. Next you need to find the game or program you want Easy Assign to work on. You must first change the game's iron from a Tool to a Project type of iron - if you use Swazinfo you can use that to do the job, otherwise you will need to use the IconEdit program.

Workbench 2.04

Once you have done this, set the default tool to EasyAssian, then for each assian you want to make add a new Tooltype called ASSIGN=<device name> for every assign you want to make. You can also run other programs beforehand using the PROG=<name of program> Tooltype. Once all of these have been done the game the icon belongs to will be run.

LUPE Author: Frank Toenner Workbench 2.04

one small sentence, Lupe magnifies an

No FILL NO DRAW Author: Kamel Biskri

Workbench 2.04

These are two tiny programs that change the way Workbench displays its icons. Normally, icons have to have a bevel box around them and they have to be opaque, so you cannot see through them. These two programs, No Fill and No Draw, allow you to stop your Amiga doing both these things and can make your icons look much more natural without the forced bevel. If you want a bevel around an icon you can draw it yourself.

You can either run both the programs by adding them to your startup-sequence or, much easier, drop them into the WBStartUp drawer. The NoFill command can cause problems with normal icons as certain colours become see through and the icons can look speckled. The NoFill program is of greatest use to people who use Newlcons, in which case these programs can make your icons look much better.

borderless icons can look so much

To use the following program you need to have the Magic User Interface v3.2 installed on your system. Without it you will not be able to

run any MUI program. MUI is available from any good PD house.

SHELLBENCH Author: Nick Christie Workbench 2.04 Magic User Interface v3.x

What is the quickest way to run a program apart from double-clicking on its icon? That's right, use Workbench's execute function. If you'll right Annigo E a small requester paps up also which you can type the name of the program you want to run. There are problems with this though. Firstly, it completely least the Workbench which is not good, and seconds, you have to type the entire path of

the program in. ShellBench gives you a completely separate program that runs any program separately from Workbench, It has a history buffer, like the normal Amiga Shell, that you can scroll through using the up and down cursor keys. It will also do filename completion, so if you type part of a file name and then hit Tab. ShellBench does its best to complete the name. If it comes up with more than one answer you can cycle through them all by pressing Tab again. Hit shift and help and you get a file requester allowing you to odd a program or file this way. You can even assian your favourite programs to the function keys for quick retrieval.

It may look simple but ShellBench is a excellent replacement for the execute command

TASKBAR V5.2

Author: Robert Ennals Workheach 2 04

Windows 95 fever is sweeping the nation, and this programmer took a shine to the task bar that you get on the bottom of the screen in Windows 95.

His Amiga version performs the same functions, giving you a quick and easy way to jump to different programs and windows by clicking on the buttons that appear on the task bar.

There is a text-based preference file that

There is a text-based preference file that comes with TaskBar and this needs to be copied into the BNARC deaver in the preference framer. This preference file lets you change a number of points about how TaskBar works. You can vary the number of buttons and the width of the bar, but the main use is to allow you to add programs to its Jaunch with own in you can be a fire from the preference have the preference and the preference are defined in the preference haunch, and these are defined in the preference.

short cuts to both running programs and accessing them

APPCON

Author: Stephan Fuhrman Workbench 2.04

It really is amazing how many good ideas made it into Workbench 2 and even more into version 3, yet so few are used in the standard Amiga programs that you get with your Amiga. Stuff like Appl.cons and AppWindows that allow you to drop icons into programs windows.

How many times have you been using the shell on the Workbench and the file name that you are about to type in is there on the screen, but there is simply no way to get the file name into the shell without having to type the complete path in. Until now, that is. Apocon turns your shell window into an

AppWindow that you can drop icons and drawers into. If you copy the program into your C directory when you type AppCan you will now be able to drop icons into the window and its name will appear.

You will probably be best editing the Shell-Startup found in the S directory which is run by every shell before starting, and any commands you place in there will be run before hand.

TOLLEUHR Author Gunther Nikl

Workbench 3.0

What time is it? I don't know. Well you should, and with TolleUhr you will have no excuses. If you imagine an analogue clock, much better looking than any digital one, that you can resize, change the shape of the hands, face and even the colours that everything is drawn in then that is TolleUhr.

that is Tolleubn. There is no installer with Tolleubn so you will have to copy everything acros by hand, but there is not very musch involved in this. Most importantly, you have to rename and copy the correct tolleuhr. Jibrary into your Libs drawer. If you have an 68000 processor, the one in the A500, then get fid of ,000 and copy it across into your Libs drawer.

All the options are changed through TolleUhr's menus - this is not the easier way to go about things but it works and you have to do it as the initial settings are horrible. When you have got everything as you want, you can move and resize the clock wherever you like and then save your options.

Bigger, small fatter, thinne Whichever w. you want, TolleUhr can

UROUHACK V1.7

Author: Tinic Urou Workbench 2.04

I originally put this on the coverdisk out of ouriosity. It's a little hack that changes the look of Gedtool buttons which is great but is not really of any use is it? Well, this latest version is just getting old in silv.

Intend of just giving you the choice a few different looking system gadgets, which would be fair enough, this version now lets you create your own system gadgets. If you do not like the ones that come with Usuahak, fine up your copy of Defairt and why your own. Using good old Datahpes, Usuahak can accept IFF images and replace the normal window gadgets, check marks and radio buttons with these. Finally,

UrouHack comes with a full installer that will install the program and all UrouHack's files, and also allows you to change your preferences afterwards. Before you use the installer you need to remove your old UrouHack line from your Startup-Sequence – if you already have an older version.

You should remember that Uroutack is a hack and does not work perfectly with all programs. The main problem is with it changing the size of window borders. This either looks bad, or at worst it will cash your machine, as it does with StormC. Therefore, I wqould recommend you try that out first before you install Uroutack.

I don't like those gadgets, so I will change them. Hey mister that there's crazy talk. Not with UrouHack

ORDER OVER £60

ell if you managed to get through last month's virgin Internet guide you should now be FTPing IRCing and Web browsing to your heart's content, and you will even be able to receive news and e-mails. This just leaves the subject of setting up AmiTCP so you can send out

a-maile

At the end of last month's guide you will have already installed what is known as an SMTP Daemon. This watches out for new mail that is destined for your machine appearing on your Internet provider's mail server. When you first link up, every few minutes the Daemon checks to see if there is any new mail. If there is it is automatically downloaded from the mail server to the correct mail box in

your UUMail directory On top of this you need a number of other small programs that many mail programs need to allow mails to be sent from your machine to wherever their destination may be. If you used the Demon DIS95 installer all these programs have been already set up for you and are happily running in the background sending the mail off. If you did not use the Demon installer then you will have to get hold of the programs that handle e-mail dis-

patch. To get your mailer up and running you

need to get hold of a couple of programs that will spool sent mail and also post it to your mail server. Possibly the easiest way to set up the mail is to get hold of the archive comm/tcp/Amconnect.lha from Aminet. This

Jargon

MME - Multimedia Internet Mail

SMTP - Simple Mail Transfer

If you made it through Neil Mohr's AmiTCP guide last month. all you'll be waiting for is to send those e-mails. Here's how to do it

has all the files required to post and receive both e-mails and news articles, and it comes with a good installer script that will get you going as quickly as possible.

When installing Amconnect there are a couple of points in the installer script that you do not have to do because you will have created these files last month. The first part is when it asks if you want the mail Daemon

NTERNATIONAL RESCUE

The Internet is a worldwide phenomena, and you can quiet easily find yourself com municating with people from all over the world and not even realise it. Due to the international nature of the Internet you would have expected to be able to use the international characters that are available in the ASCII character set. For English and American users these are not used very much except for the British E sign, but every other country in the world will need access to umlauts and the other accents found in French and German and most other non-English languages. The problem is that normal e-mail only uses 7-bits per character, where as ASCII

requires 8-bits. So if you try to use a pound sign or any of the other international characters they just appear as spaces to the recipient of the e-mail.

The only way around this situation is to either usencode your original mail - a little round the houses - or use a MIME mailer. Using MIME you can specify to send emails in a number of different formats that will keep all of the international characters intact. Along with being able to send text encoded as Base64, you can tell your mailer to send it as the normal 7-bit or full ASCII 8-bit. As standard the MIME form of text is called quoted-printable and will send you text, so it will not be affected by the normal 7-bit e-mail limit, even though you should be aware that text that you send is word wrapped to 70 chars across. Therefore, if you send a uuencoded file using a MIME mailer you should select 7-bit text as this reproduces what a standard mailer will do

O The only way you can use any of these characters is to get hold of one of the Amiga's MIME mailers

installed – this is already in place so you can say no. The second point is that it will ask you where you want a number of directories created, but again these are already in place so you can proceed past all of these without

The installer will then ask you for various details about your Internet account and then modem details about your paternet account and then modem details as long as your modem is thyse compatible, which it should be. When it asks you if you want to change your autiocoming file say no because you should have already created this. And that is it.

Amoonect will handle all your setting up and logging on to your internet account. If the program has trouble connecting to your modem go to the modern setup and change the AT&D to AT and make sure all the other entries are in capitals. If you still have prob-

A usable TCP front-end, Amconnect makes getting online that bit easier

lems after this, try reducing the modern speed. Once installed you are ready to rock and roll, apart from the fact you may need to get hold of a mail package. Many people use the Unix ports of Elm or Pine, but these are a little complicated to set up and I prefer something more straightforward. A demo of the new package Voodoo is available on Aminet and also MetaTool is worth a look if you use MUL.

V 00000

The latest, and in some people's opinion, the greatest mailer for the Amiga or any computer, Voodoo is o MME compleant mailer that provides many features, some of which are unique to Voodoo. The first thing you are going to notice is that with Voodoo, off your actions are performed from a single good looking and simple-to-use CUII.

Voodoo works slightly differently from other mail programs. Usually mail programs keep the destination mal baxes that are created by the SMTP Deamon, but each time you start Voodoo you ask it to collect mail from these files. It will then extract each mail and create a separate file in its own corresponding mail directory.

The demo version of Voodoo only allows you to have a single mail box, but the fully-registered version allows you to have as many as you like. After you have installed Voodoo, which is done for you via on anmal install script, you will need to point each Voodoo mail box at the correct mailbox spool file. Once this is setup, Voodoo will extract all the files

Once in a setup, voocoo will extract all the fleet from this spoof file and generate all set of all the mails in it. Fee each mail the various MIME parts of it are slapleged as isons as part of the speed button bor that runs across the middle of the window. These allow you to jump to even fulferent section of a mail, with test, pictures and sounds all being displayed in the soralisable window. Even usernoded mail can be handled automatically with the file being automatically decoded ready for you to save it off as the correct

binary life.

When creating mails you can "insert new parts to a mail using a file requester. Voodoo then automatically takes care of packing it in the mail, just os it shockes care of unpacking it. Currently, you can save off separate MMM sections but there is no very to view, the control is on its own screen — you have to make do with the representation in the Voodoo window. Nothina

One of the most recent niga mailers, and it shows

can be perfect and there are a few problems, with Violodo, mainly with kinterface. For storters, the programmer is an some sort of personal crusade about the fact the Amiga does not have any boilin public, screen support. Because of this he has refused to include any option in the program to select a screen to run Woodoo on. This forces you to use a secondary program such as Screen Wizard to allow Woodoo to open on its own screen, if he is making a valid point, but there is no meet to kinkly your program

Over it.

Another problem arises from the mail list and the mail viewer being lumped into one window. If you have a good number of mails in your mail box you are stack to having a fairly small view of this list—it would be much better to have a separate mail list window. This would obe problem to the possibility of being oble to read more than one mail and to the read more than one mail and to the read more than one mail at ance, which would

be nice.

The other problem that arises from the GUI is if a mail has more MIME parts than icans that fit in the tool bar. This means you will never be able to access them, as their irons are not accessible unless you can make the window bigger. Something allowing you to scroll through all the icans would be needed in this

These are only minor quibbles and overall Voodoo is an excellent program that is very easy to use.

METATOOL

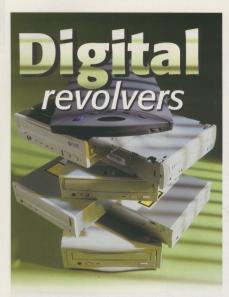

This is another MIME mail reader, and one that we use in the office. It uses MUI which some of you may not like but it is totally based on listwiews that are very speed to use. MetaTool is completely multithreaded, so every wintdow opened in MetaTool works independently of the others. Therefore, you can have multiple mail box windows open as well as being able to read as many mails as you like.

If you followed last month's guide, once you have estracted MetaTool it is realy to run. The only thing you will need to change is MetaTool's Molicop file. For each Milht Boy you need to specify what esternal program should be used to view it. Normally MultiView will be fine, but you need to make sure the path of MultiView is correct — this should be sysuitities/multiview otherwise MetaTool will not be able to find MultiView to run.

MetaTool uses the standard mail boxes generated by the SMTP Daemon, and each time you open a mail box MetaTool scans the file generating an index file and mail list. The current version will also automatically update if new mail arrives while you are online, so you do not have to quit the program. It may not be as flash a boudoob but it is simple and fast to us.

∩ If you have to deal with lots of mail, MetaTool provides a powerful interface

CD drives have become an indispensible part of any serious Amiga set-up. Now Gareth Lofthouse brings you the definitive head-to-head guide

Jargon

Small Computer System Interface; an interstandard for connecting peripheral devices to traver system.

IDE Less advanced interface than SCSI, only allows you to connect two peripherals and the data transfer speeds are not as fast.

RENO PORTABLE CD-ROM

When it was released in 1995, the Reno was acclaimed to be the product that brought a bid of style, innovation and flair into the all-too-uniform CD drive market. While everyone sele was trying to outdo each other terms of speed, going from triple-, to quad-, then sisspeed or above. Media vision released a relatively odulud-speed drive that still makes more sense for the average Amiga cowner.

In a world of square hardware, the chic Reno is sleek, wedge-shaped and unashamedly purple. It features prominently mounted controls you can adjust without tweezers, it's lightweight and, unlike it's officeoriented rivals, it looks like a gadget you can have a bit of fun with.

As indeed it is. Uniquely, the Reno can be transformed from a multimedia workhorse into a portable audio CD plaver fit for irritating fellow passengers on any train or bus. In this form the Reno is a welldesigned lightweight unit that can be carried around in the supplied protective case. A pair of headphones have been supplied, and it's so simple to use that the casual observer will be clueless about it's more technical hall-life. A small LCD screen gives you the usual track search

details, while routine play and selection buttons are dandy. In terms of sound quality, it won't have the audio-buffs in a fensy, but it will do the job efficiently enough for arryone else. Many people would be happy to pay the sking price for the Reno in this capacity alone – though the fact that four alkaline batteries will only give you 90 minutes of play will make it costly to use without the mains lead after a wins lead a wins lead after a wins lead after a wins lead after a wins lead a w

But, of course, the Reno is mentioned here because it can also be transformed into a CD-ROM drive. Users

simply attach the docking station – a small adaptor that is easily snapped on and off at the base – and plug it into a Squirrel SCSI interface. From thereon it

DOUBTS ON THE IMPORTANCE OF CD

0181-760 0500

ONY CDU-765

Rolling

Fast vet unalamorous, reliable and efficient, this is your bog-standard SCSI CDdrive. There's not a lot to distinguish it from the others. Of course, there's the usual trayloader (thank God they got rid of the pointless caddy method), head-phone socket with volume dial, on-off switch...you get the picture

What is different is that the drive now features a new Sony mechanism which their lab says has areatly improved reliability - or 100,000 hrs MTBF as they put it. Not having the luxury of 100,000 hours before deadline, I'll have to take their word for it: suffice to say I've never had any problem with a Sony mechanism before, despite rough office use

One thing you'd have hoped a company like Sony would have got rid of is those infuriatinaly fiddly jumpers at the back of the CD player. It's a picky complaint, but it's important to correctly set the SCSI unit ID of the player or your drive won't be recognised by the Amiga. Having to mess around with these things makes it easy to screw up. It's unnecessary, because other drives visibly display the ID number and allow you to adjust at the click ofa button. So much for user-friendly plua-

behaves just like any other SCSI drive.

neck would you?

that must not be overlooked.

Of course, nothing's perfect. Compared to the other drives on test as a dual-speed it's relatively slow, and the Reno apparently won't play Mpeg movies. But since the Amiga so far remains sadly lacking in the all-singing-all-dancing multimedia department, this is unlikely to be a problem for most Amiga owners at the moment. Certainly, it is adequate for enjoying the wealth of PD CD titles currently Another slight fear is that, being a lightweight portable, it doesn't feel as durable as something like the Power Quad. But then you wouldn't want to foot-tap round the park with Power's monolithic drive round your

Basically, the Reno is a rare example of a hybrid product that really works in both its guises. As a CD-ROM it represent reasonable value in itself, but the fact it converts to a portable discplayer makes it a bargain

OWER OUAD

Probably one of the easiest options for A600/ A1200 owners. Power sell this guad as a kit that comes with a Sourcel SCSI interface and the relevant software to set

Typically for most drives from Power Computing, it's big and takes up a bit more desk space than is necessary. That said, it has a sturdy metal casing and a good record of reliability behind it, which is ultimately more important.

Praise is due for the simple but helpful inclusion of a SCSI ID address selector, which means you don't have to mess with biros and microscopic switches when setting the drive up. If only other manufacturers would follow this example, life would be that hit easier

For those who want to listen to audio-CDs on their drive, there's the usual audio leads, headphone socket and volume dial plus the necessary software provided on

Most importantly, however, is the fact that this is one of the best value starter kits available for the standard Amiga 1200/600. It's not six speed, but as a guad it's fast enough for most current uses. Furthermore, it's external and it comes supplied with a Squirrel. which is an invaluable piece of hardware in itself, plus CD32 emulation software which will allow you to play CD games.

LEXTOR SIX SPEED

Another ultra-fast drive here, but the Plextor initially looks less attractive than the Toshiba or Goldstar because of its price tag. However, SCSI drives always cost more than their IDE counterparts, partly because they can be chained together with numerous other peripherals and also because the SCSI interface is generally considered more

The control facia actually looks slightly more considered than is the case with most of the other drives tested. Two LCD lights may not sound like much of an advantage. but in the past they've given me a clue as to what's been going wrong when the drive hasn't been working. Track advance controls are also obviously better for audio CDs.

It's strange, then, to find that an otherwise modern unit is still using a caddy loading tray. So what, you ask? Having already lost two caddies in the past, and knowing that even the cheapest drives come with the normal mechanical tray, I just find them unnecessarily cumbersome. Otherwise, those who want a combination of a high-speed drive plus the convenience of a SCSI interface should give it a thought - though for most, Power's Quad will represent a better overall package.

OLDSTAR SIX SPEED

Quad speed is more than fast enough for most uses with the Amiga, but those who want to play animations and movies directly from CD may want an even faster drive. If so, a sixspeed drive is as fast as they come at the moment, though most manufacturers are on the verge of releasing their eight-speed drives in a few months.

The Goldstar drive features a blistering 900Kb transfer rate, a 160ms Average Access Time and a 256Kb Buffer Memory, It also features audio connections to play music CDs. which explains the track advance button mounted along with the ubiquitous eject and volume controls. This, of course, is combined

Bottom

line PRODUCT DETAILS

Product Goldstar GCD-R5608 Goldstar £114 (Fx VAT) 01753 500400

Ease of use 78% Implementation Value For Money Overall with other drive-standards like support for

CD-DA, and the motorised tray mechanism. Until more multimedia CD products are produced, the value of such a fast drive is debatable. But being an IDE drive (which you should be able to use with Blittersoft's ATAPI interface) the Goldstar six-speed is extremely affordable and is recommended

OSHIBA

This drive looks boring and has nothing on the surface to distinguish it from any of the others. But - and it's a big but - it's six speed, and it costs just £76.

At that price you'd be mad not to consider it as an option. though it is, of course, an internal IDF drive for use with the ATAPI interface. It includes all

the standard features you'd expect of an up-to-date drive, though unlike SCSI units you can't use it at the same time as six other peripherals. That said, many of us can do without that luxury,

Beyond the fact that Toshiba drives are a well-respected make - in fact Toshiba mechanisms are what you'll find at the heart of many of the CD ROMs made by Amiga stalwarts - there's not a lot more to be said. This is an efficient, super fast drive at an incredibly affordable price. Recommended.

LOOK

As you might expect, the HP4020i doesn't look much different from ordinary CD-ROM drives. with the obvious exception of there being a write status LED which glows red when there is data being written to a gold disc. The case itself is pretty much fully enclosed so you won't have to worry too much about touching static sensitive components as you are inserting it into your machine. The connections at the rear of the drive will also be instantly familiar to existing owners of CD-ROM drives, with the standard SCSI and power connectors, four-way audio lead and jumpers. All these are very clearly marked so that you don't plug the SCSI cable in the wrong way, for instance, and the jumpers aren't too difficult to get to.

The drive functioned just fine with both the standard A3000 SCSI controller and the Oktagon we have at work, and performance under them was almost identical. However, before you rush out to buy yourself one of these beauties it is worth remembering that you will need some other items on your SCSI.

Using MasterISO is a simple procedure, listing all the files in your directory so you can build your image

For a start, you'll need somewhere to keep all your files while you are working on them on the hand drive, then you'll need somewhere to store your ISO image once you have built it. Now there's not much point devoting a whole gig drive for files if you can only fit 650Mb's worth not not 20, but you'll still need about 1.3Cb just for CD development (these drives meedit a stually the SCSI Matter ISO works its x

working.

chain. Of course, you'll be able to dump that

CD-ROM drive you already have, unless, like

me, you like to listen to audio CDs while you're

More importantly, you will need some hard

drive storage space. We're talking about serious

amounts of hard drive storage space here now.

as well using an IDE drive for this purpose, it's just that you will need a SCS controlle for the CD burner itself). This shouldn't prove too big (or expensive) a problem these days. But there might be another pitfall in the luxing form of the dreaded Rigid Disk Block which will limit the amount of space you can devote to hard drives to a pathy 4.5Gb. Well, it might seem like a lot to start with, but if you are going to the problem of the seem like a lot to start with, but if you are going

to be developing CDs, you'll soon feel the strain of Veeping within those limits. Using Master!SO is pretty painless – you simply point it at a hard drive or directory and it lists all the files therein. From there you can build an ISO image orito another partition and finally write that image onto the CD-ROM gold disc. Although it doesn't seem like a lot of disc. Although it doesn't seem like a lot of software for its asking price, it is essential for anyone using a burner on an Amiga. If, occurse, you are going to use this drive on a PC you actually get everything you need to start burning CDs, even a SCSI controller card.

YOU BURNT MY CD!

This drive is great. Once you have actually created an ISO image of whatever you want to put onto CD it only takes about half an hour to write the whole lot onto disc. of course, compiling the data and building the ISO image

might take you a lot longer, but that's life i guess.
One of the uses I have considered putting it to would be to dump my whale Work partition to it, all 450Mbs. That way I can then use all that space for other things like frames from LightWave or clip art. etc. and my programs

will never get corrupted. Okay, so they won't load as fast from CD as from my hard drive, but then it's not like having to reload programs over and over again in a single

session, so the slowdown won't cause too many problems. As for whether I think you might have a use for it, well, I think that if you are currently looking to buy a DAT drive and don't have a CD-ROM, it might be worth the extra cosh to get one of these drives. The media doesn't cost as much and they have more than one use.

o you bought yourell a CD32.

Olay, so it may've been a good idea at the time because the future which was runoured to be ahead was looking mighty fine and games companies were interested in releasing top quality games. After all it was the first 32-bit and the standard was allowed to be a companied which was the first 32-bit and the standard was the standard w

So can you continue to play delights such as Cannon Fodder and Microcosm for the rest of your life? I don't think so.

There were no actual games on the CD32 which took advantage of the machine's capabilities. Unfortunately, all we saw were conversions from the A1200 floppy version is on the CDs were released when they weren't even half full Something should have been but CD32 owners were left pretty much in the dark and once again, it was left for someone else to dig Commodore out of their hole.

Eyetech are the masterminds behind this fabulous way of turning your CD32 into a fully functioning A1200, making proper use

BLUE CHI

O You can see that after installing Workbench 3.0 and then MagicWB your CD32 can look like this

of the CD32's AGA chipset. The actual module makes use of the CD32's expansion port at the back of the machine, although it's not just a case of taking the screw out and sliding

I managed to install the networking oftware Envoy so others could share he delights of my hard drive

it in. Firstly, you will have to take all the screens out of the main plastic base, making sure not to dislodge the laser ribbon, and then you have to stand the lid up vertically sticking it down with two sticky pads to aid you, although it may be handy to get somene to hold it while you firmly side stomeone to hold it while you firmly side stomeone to hold it while you firmly side the module into the expansion port while the actual board sides over the metal casing.

All you have to do then is screw it up tightly so you don't see the board through the side of the CD32. The whole fitting process itself caused me no problems

COLOUR COORDINATION

It's difficult to see the Amiga A1200 in such a mismatch package. It's all in bits and the CD32 is and always has been an odd blue/arey colour while the rest of Amiga's equipment has always been white or cream. So what exactly was the thinking behind the design? Was it because they were both meant to be completely different pieces of kit?

The only real downpoint of the module is the colour scheme. The cream keyboard and Sees may not look suited next to the blue-like case of the CD32 and powerpack, but who's complaining? If the keyboard was a blue colour similar to that of the CDTV it may look slightly nore professional but nowhere near as Amiga or home computer-like

C The whole package is complimented with an excellent installation dist

whatsoever and it managed to slide in with ease and perfectly in conjunction with the

The module has five ports on the back which give you the access an A1200 can offer. The Parallel port enables you to conred to a printer or onto another Amiga using a Pamet cable, the Serial port lets you consect to a Modern or another networking method via Sernet, and the VGA port in the middle is for a VGA monitor. The external loppy drive will fix up to the drive port and feally there's the video port so you can use an ordinary RGB output for a much sharper picture than the composite, which is your only option with a standalone CD32. If you take a look at the back of an A1200 you will see the SX-32 module now has every port the A1200 has to offer.

That's about all the installation there is he only thing left is to sort the hard drive out There is an installation disk with utilities "Evetech are the fabulous way of turning your CD32 into a fully functioning A1200, making proper use of the CD32's AGA chipset'

enabling you to read and configure and then partition your hard drive perfectly. Our hard drive was 240Meg which is quite amazing when you imagine it's merely a CD32. In fact, it's impossible to think there is a hard drive in the CD32.

With the SX-32 module you can make use of the AGA chipset, graphic and sound

MALL CHANGE

One of the problems you may come up against is the need for a floppy drive. If you've bought yourself a CD32 it's unlikely you will have a floppy drive knocking about. Eyetech are selling them for £44.95 but it may be worthwhile looking around for a second hand floppy drive. You could probably pick one up for about £5 to £15.

After totalling up the prices of the various peripherals it may seem rather expensive, but at the end of the day, if you've already spent nearly £300 on the CD32 itself, maybe it would be worthwhile to invest further to make use of the money you've already spent. The only other options are to put it away to collect dust or revitalise it by turning it into what the CD32 should have been.

A free CD is also included to kick off your CD-ROM fun

software, and something which CD32 own ers have never been able to get their heads around - saving. Before, there was always a complicated key method for locking and unlocking save games built in to the CD32's hardware. Finally, you can output all your own files to the hard drive inside or on a floopy via the floopy drive.

What makes the SX-32 module a dream to use is that the actual CD32 unit isn't really modified in any way. Basically, they are all peripherals which merely add-on to the unit itself. For instance, if you have never opened your casing out of curiosity you would never believe there is so much room inside. The hard drive works away quietly and quickly and certainly makes all the difference.

QUESTIONS & ANSWERS

I have had an Amiga since the OS 1.2 A500 and would never think of leaving the platform.
I also have a Pentium PC which, funnily exouth, cost me less than my A1200 setup.

Anyway, to the point of my letter. I read just about all the Amiga magazines that have any serious content and arm sick and tired of reading sad letters from whining Amiga users about Excom, AT, software houses, PC and Max users, etc. and how they are all out to get the Amiga or how the Amiga isn't supported

Then you get the 'lemon heads' (sour fixed) going on about how the Amiga multi-task better than any system built. Remember, you can only multitask as far as your physical RAM permits without an MMU. It's great being able to multitask, but if your machine slows to a halt to do it, it anit'm much good.

So, I would like to ask a couple of questions and answer a few:

1. Why did we lose the best bits from OS1.2, i.e. no borders around icons, diskdoctor,

i.e. no borders around icons, diskdoctor, NotePad, PM (performance monitor), memory map, the graphical tutor (The Very First, if you remember it) and Say?

2. Why do we slag off DOS and Windows 3.x so much when they at least come with Virus Scan, Defrag, ScanDisk, move, Compressed backup, disk doubler, file manager, word processor, card file, Paintbrush, media player, sound eccorder, Terminal, on-line help, unformat, undelete, proper sounds, object linking (DEL extensive orinter drivers and a proper

deboard as standard?

3. Why do we say that the Armiga is the only system that can be used straight out of the boar have you ever tried byping a letter on a 7% scener if you have, if the surpresed if you can now read this. The Armiga is only good for pares out of the box, you need a momitor for any sort of serious use (standard on a PC, you can the every extended on the PC, you thereight and the price of the with the EXDOOP AROOD).

Now, here are my answers to some

Why don't the software houses write any decent software for the Armiga any more?

A Because you are so tied up slagging off other platforms and 'How they spend so much on upgrading their systems to run the lasts software and how great my standard

A500/1200 is'. Try and run Scala or Gloom or load a Jpeg, etc. and see how easy it is. If only you lot would wake up and expand/upgrade your systems (A500/600s are dead), then maybe the world would take note.

Q. Why do people think of the Amiga as a games machine and not a serious PCI. A. Because just about every user/mag spends most of its time reviewing games (book at the adverts for the Amiga Magic bundle and what do you see – gamesl), and going on about competing with the console maket, etc. The A1200 doesn't even come with a hard drive or monitor as standard.

Q. Why don't PC mags mention the Amiga? A. Because they don't care (they do mention Macs). If you lot would build up your machines and stop slagging off other platforms, then the software houses would be back in droves and we would have a latiform that could compete.

This letter is dragging on so I won't write much more. You probably think I am a PC convert and you wouldn't be far wrong, but I love my Amiga just as I love PCs, Macs and just about all other platforms – don't knock them until you have tried them.

The thing is that if we only stopped griping and whining we would soon see that we need to tell the world we want to move on, so it can help us. Imagine Netscape, Word, Lotus 123, etc. on the Amiga. It can happen if we want it

Finally, sorry there's no 'great mag' and all that, but you don't need me to tell you what you already know.

Kevin Anderson, Woltham Abbey

Kevin Anderson, Waltham Abbey

A combative stance there from Kevin, and one I think a lot of people in the Amiga community now share. Unfortunately, it often seems as though the people who were upgrading their machines are now the people who have left the Amiga and gone onto the PC, or other platform, while those that never spent a penny on their machines now from the main body of Amiga users and can be justly accused of being moaning minnies. I have had people telling me that they are

disappointed that their favourite Doom clone only runs sluggishly on a quarter screen on their machine, but when I ask about an upgrade, they shing it of as being too expensive to play games. Any Doom game is going to be expensive - all of processing power is needed to generate all those 30 graphics - Dut people would rather bemoan the fact that ABSD2 is too skiw, or that Reventiless notes in the second of the control of t

EXCUSES, EXCUSES

would like to make two observations arising from articles in the March issue. Firstly, with regard to the article on pipec, any person that uses the cost of games as an exuse to buy prizeted games (or indeed any software) is being a touch cheeky. The quick answer to this rather time postulation is to wait for a while and the price will aims certainly fall to a loover level.

I water until both Eye of the Beholder 1 and 2 were at 1019 instead of EVD before making a purchase, and the area themselves did not diminish one idai in the meanine. The same can be said of more rener games as well, but Gloom and Alien Breed can now be bought for saler IZO and neither can be described as expensive at this piece. I have purchased them both from Special beave Mail Order at E19.99 and must say that they are a largam. Most game prices will fall after the initial release.

to a very acceptable price, so let's have no more of this 'games are too expensive' crap.

My next point arises from the review of the PD effort

My next point arises from the review of the PD effort Debute Porsonn A 1000 and the comment that the pro-Debute Porsonn A 1000 and the comment that the probation of the property of the property of the proserved porson with the property of the property of the sent the required feet by registered ports of the regitered game with its ottal levels, etc. to Mr Vigdal. Here hard nothing for the no months, so sent a letter to Ma the property of the property of the property of the received my payment or not. It has now been over a received my payment or not. It has now been over a required property of the property of the protect of the property of the property of the protect or specific property of the property of the protect of the property of the property of the protect of the property of the property of the protect of the property of the property of the protect of the property of the property of the protect of the property of the property of the protect of the property of t

All things considered, I would be reluctant to send

money to another PD programmer in light of this experience and would urge all programmers to honour their commitments if they wish to continue with their trade. Neil Adams, Cramer

I guess 1% a bit like the conversation you can have about books. Do you by the hardsoft for between E10 and C20, or do you wait for the paperback version come out a faith for picts. I know not of any book collection is softback, but then i suppose there into the lype over new books that there is over new any experience, are extremely quick to reply to any experience, are extremely quick to reply to any and or e-mail and are very happy to receive any sort of payment for their program, so I wouldn't let one bad experience puty out off.

BETTER SOLUTIONS

I have been reading your magazine's US edition since the demise of Amiga World here. I have been impressed overall with the quality of your magazine, even with only limited coverage of goings on here in the States.

I must admit, however, that I was not very impressed with your response to Mr lose Fernier's letter in issue 7 of the LS edition (https://disease.ps.). While I agree that Amiga is a better choice for them than other computers on the market, I very much disagree that this could be accomplished by making future versions of the Amia more like other computers on the market, I very much disagree that this could be accomplished by making future versions of the Amia more like other computers.

I cannot vouch for the European market, but 1 do know that if the new PowerPC-based Amigas are not better at processing graphics and animations than Windows or PowerMac systems for the same cost, it will fall miserably in the US.1 am so certain of this that I am willing to put money

on it right now.

You might disagree with me, but removing the custom graphics chips from the system to make way for a slower PCI bus

graphics solution hardly seems like an advancement for the Amiga architecture. Adding third-party graphics confusion would not help the situation, unless Amiga Echnologies very carefully whore the standard library routines that these proposed graphics cards used. If you doubt me, pick up any box for a game written for Windows systems and read the system requirements section of the cover. If you don't have a degree in computer systems may be a degree in computer system may be a degree in computer systems may be a degree in comput

ment, don't expect to understand what you are reading. A much better solution would seem to be redesigning the custom chips and placing them on

tom crips and placing them on the system bus, with a slot added to the motherboard for an upgrade card as better versions of the chip become available. This would probably be similar to the CPU slot on the A3000/4000

As for the idea that the A1200 currently is a good bargain, again I cannot vouch for the European market, but here in the US it should be possible to put together a 486DX2 66MHz system with 16Mb RAM, 64bit SVGA graphics (VLB), a 1Gb hard drive, a 16-bit sound card and Windows 95 for on slightly more than an A1200 with a 130M hand drive (less than \$100 difference if yo shop around). You might have to assemils the system yousself, but at least you woi have a decent idea of how to fix if if ne broke down. You would also have the advantage of a larger software base ve hoose from. It might not be the kille graphics system that an Ado001 is, but would be considerably fess expensive an

would be considerably less expensive an increase. A policy computer has recently discover the problem with trying to market cheek the problem with trying to market cheek posting a 568 million loss for the last quart of 1995. Apple has mostly blamed this for on expecting the Macintosh Performa line! to en expecting the Macintosh Performa line! the the better selling system during the Christmas shopping season. In fact, they a now backlogged on orders for their A! PowerMax systems and overstocked on the Performa range.

For many people a Windows-based con puter is probably better than an Amiga a they will be certain to have support for the computer for some time to come, and se dom have to worry that they will only have

RENEWAL QUANDARY

I recently received notice that my subscription to Amigo Computing is due for renewal. At 2 is nie magazine no question about that – but I am most hesitant to renew. Why? Because in several past sixues, columnists and editors have urged readers to support Amiga product dealers, especially during this difficult time of transition between the demise of Commodore and the establishment of Econn'! Think that you, as AC, need to know what's happening 'out there' with such dealers. I own an Amiga 500 with 1MB ARU, one external I own an Amiga 500 with 1MB ARU, one external

floppy drive and an ASTO CD-ROM drive, but no hard forect. Obviously, I need to urgoade in order to utilise most of the software products reviewed in Amgio Computing, But I do not know enough about upgrade items such as additional RAM hardware, hard drives and interfaces listed in the sids of the deaths. So I wrote as demanded items such as additional RAM hardware, hard drives and interfaces listed in the sids of the deaths. So I wrote as death and a such as a support of the side o

To date, I have received neither a reply to my letter, nor the letter itself returned by the Postal Service as undeliverable. (In other words, I must conclude it has been ignored.)

Other dealers have been about as unhelpful as

Software Hut. So where do I have to go for upgrade hardware? No dealers near here; I would have to order out of the area. How do I support dealers like that? Sure, I could use the telephone to obtain the needed information. But do you like paying long distance charges for 20 or 30 minutes of being on hold until you give up in frustration? I am not about to use the phone

Most of the information reviewed or published in AC is for units of greater capability than mine. So what good is that information to me right now? The last reason for my hesitancy is not crucial, but I mention it to complete the picture. The crucial reasons are the obvious uselessness of the adverts since dealers are apparently not too interested in selling Amiga products – at least not the ones needed to upgrade an ASOO. And crucial, too, is the uselessness of information and reviews for products which will not work on the ASOO, so for all practical purposes, I have been showed out of the market.

I have decided to wait and see what Escom do. Wait and see if the Amiga does, indeed, make a comeback. I do like my ASOD. But if I card to obtain needed hardware or information, why should I buy a magazine which will only add to my discouragement as I read it and realise that none of it is for me.

I would welcome a comment or reply. If I don't hear from you, I will add AC to the same list on which I have but Software Hut and their kind. If In the future, I find a practical use for AC, you will hear from me. And I do thank you for the service I have received from your branch of IDG.

Wilfred L Ziekert, Branson, MO

While I sympathies with your attempts to contact. Aming is adaers to help you upgrade your machine, I think the general consensus of any dealer hearing your tale of new would be that you would probably your tale of new would be that you would probably agoing ASOB to one side and bought yourself a new or second-hand AI 2000 with a hard drive. You would need to replace that ASTO, but other than that you would have a far superior machine to the one you would have a far superior machine to the one you would have a far superior machine to the one you would have the new as the one of the other than the you would also then have a use for 59 per cent of the material we publish in AC, and have a pretty decent home computer to be one computer to be one computer to be one computer to be one of the property of the other than the property of the p

ONE WORLD

As an Amiga owner, I feel I have to poin out that not only is the Amiga going down the drain, but so are Macintoshes. Archimedes and every other independent platform. With the might of Nucrosoft behind it, can it be long before the only machine arynon will be able to buy will be a PC done and Windows 95, 96, etc.

be a PC (John and Windows 95, 96, etc. This will susely be the end of compent to the compensation of the

Barry Mangon, Chingfor

Microsoft are now in a position whee they not only control the operating system of the world's most widespread platform, but also produce the major software packages. We can but hope that market forces will stop Microsoft from taking over the entire range of computing products before it's too late. one dealer in town (if that) who might go under at any moment. In all of Silicon Valley I have been able to find just one Amiga dealer, and they seem to be phasing out their Amiga stock. Even small towns in California usually have at least one place when people and one of Windows combuser.

er

If Amiga Technologies expect to survive in as American computer market, they will have to build a computer that can handle gapkis and animation significantly better than other computers on the market, and do at at the same price. This is what the Amiga has always been best at, being a cheaper solution to an SCI Indigo series, not a Mac

Have owned an A3000 almost since they came out and quite admire the little madrins's powerful graphics abilities, but if length etchnologies think they can convince me to purchase a Powerflac clone with an obscure operating system and a small schware base, they had best rethink the duation.

Edward K. Smallwood, Scotts Valley, California

I late to pick you up on some of the

more contradictory statements you have made in your letter to us. Mr Smallwood, but we really need to settle the issue. First you ask for Amiga graphics chipset to be better than the current standards to be better than the current standards to the PC, and then you deride the A1200 for only being marginally cheaper than 486. The reason the A1200 is so expen-

be better than the current standards for the PC, and then you deride the A1200 for only being marginally cheaper than a 486. The reason the A1200 is so expensive now is purely because of its custom chips. If it used a cheap VGA chipset, I'm sure the cost could be practically halved when in conjunction with other, more standard, part.

'Adding third-party graphics confusion,' as you say, will be the only way the Amiga will be able to catch up with these other platforms. After all, how long do you think it would take to design this builder graphics chippet? Im people who builder graphics chippet? The people who the say that the last six or seven years purely concentrating on graphics chippet design. You then say that the A4000T has a killer graphics system, when in fact, it is no better than the A1200Y and fals far better than the A1200Y and fals far

short, the best thing the Amiga has going for it is its operating system, and it is this that drags its graphics kicking and screaming into the '90s and gives it some sort of edge over the competition.

In my opinion, the only way the Amigas can survive is as a top-notch multiple can survive is as a top-notch multiple competing system that offers proper multimed in furtionality for predictionality for predictions, the still make machines, but they should license any custom hardware to other companies who would then be able to make more specialised machines for specific purposes like video editing, notific purposes like video editing, notific purposes like wideo editing, notific purposes like wideo editing, not and the like.

The only way to do this is to make sure the OS can handle every eventuality in terms of libraries for graphics, sound, and pretty much every other operation that can be updated or even replaced by individual manufacturers. There is still an awful lot of work to do to archives this, but Amiga Technologies have made a start and I can only hope, for all Amiga users' sake, that they succeed in their endeavours.

MY SISTER WAS ONCE BITTEN BY A MOOSE...

ii. Im a 20-year old Amiga fan who is going is by the forthcoming A 1200-i in sure/early autumn this year. This new natine is believed to be powered by the motherous office in the following the content of the content

I really hope the A1200+ will be a world testing machine with a new Workbench and Kickstart on flash ROM for easy upgradng it could even be called Workbench 96! Ditching the AGA chipset and going for an estation of it in a VGA-type system would its be a good idea because it would allow for easy painless upgrades, for example to 24-bit graphics, 16-bit, studio quality sound with more channels, 3D manipulation and

Mhy not ask AT to sign a deal with RBF software to bundle the forthcoming OctaMED pro Soundstudio package and include the complete set of high quality samples from Walkabout Music with the A1200+7 including the new Doom clone firesthless' in the A1200+1 unduling would also be an excellent idea, and all at a low price!

Helge Kvalheim, Flaktveit, Norway

Nice to hear from our Norwegian readers. If you've read last month's piece on CeBit

96, you'll know a lot more about the A12000 or Walker, as it is known the A12000 or Walker, as it is known and the A12000 or Walker, as it is without at that the Coldfire processor hasn't been used to the new machine, but at least it is a wind to the new machine, but at least it is a worked to be used to be used to the second of the work of the Workshorch. It would appear that it he updated, but perhaps not as much as would all like for this machine. The idea of having Kickstart on a flash ROM might also be scuppered by the fact that so be scuppered by the fact also be scuppered by the fact will be a size in, and flash ROMs of that size might be extremely expensive.

Still, it's a start on the way to the PowerAmigas of next year and we can all hope for an Amiga renaissance!

ANCIENT HISTORY

uss toding about in a little used cupboard over the sevend and discovered a book entitled "hoosing and using your home compute, an introductory course." It as published by Orbis in 1984 and to be honest I have two before read it in any depth. Pascinating stuff, soft peace, about what and how to do it, as you would seet, but some of the comments make fascinating safig in 1986, particularly in context with the on-going ingus x-PC saga.

here is an early comparison between various models at a graph showing how the price of the mirror has time since the Apple III which in 1978 cost £995, down tough the various machines until the Commodore 64 and was quoted as 'Approx. £200' in 1984. At the end the introduction to that particular graph, the book id: these are selling prices from dealers of the most

competitisely priced computers with at least 15K of RAW. Wood One of the comments in the review of the 64 was enlightening – 'the User's Guide is of the low standard associated with Commodore manuals* — they never learned, did they! Most of the problems I had as a beginner were directly associated with the unclear instruction manual I received with my A1200.

I won't bore you with any more, but it serves to highlight the current debate between Amiga uses in all their varieties and the current preference being shown towards the PC in certain quarters. I read, for instance, in the leading PC magazine, that the reason the 468 was being offered complete at only £499 (including VAIT), was certainly that PC users must frow consider the Pentium 100 with at least 16Mb RAM as the entry point....' in would only comment from a personal viewpoint, that as far as I am concerned my Amiga 1200 with 4Mb RAM and a 170Mb Hard drive, plus my lovely 27g drive, all working happily through my HIQ Workstation via the Squirrel SCSI interface does all that I ask of it, or need it to do. And when using FastView, I can view all the pictures I need in glorious colour as near to instantly as makes no difference – so who needs to spend much more than £1500 to get a Pentium 1007 on ASABIT Winton. N Yokshire

Nice to hear from you again Ian. As Kevin Anderson said, people should get whatever best suits their needs, and it looks like you've found your ideal machine, so why worry? Even in five years your Amiga will still be doing all it is today, which might just still be enough for your needs.

DRIVING QUESTIONS

I have an Amiga 1200 with a 120Mb IDE hard drive and OS 3.1. I currently plan to buy a CD-ROM drive with a Squirrel interface and also intend to buy a larger internal hard drive with

How do I put in the hard drive myself? If I by a SCSI internal drive would I still need the Squirrel interface? Would I still need sone kind of interface for a SCSI hard drive? Tour advice is appreciated.

Michael, Fair Lawn, New Jersey.

If you intend to buy a CD-ROM drive for your A1200 then the

drive for your A1200 then the Squirrel is your best bet, and it really is just a case of slotting it into your PC slot and installing the software. You say you isted to buy an internal drive.

this would mean you would have to remove the current drive you have in your A1200 as there is simply not enough room in an A1200 to have two hard

If you intend to replace your intenal DE drive, which Lam assuming is a 2% inch drive. Bittle are 2% inch drive. Bittle are we 2% inch drive is very simple. It is just a case of taking the old one out at its try and replacing it with of the complete and the complete as 2% inch drive this complicates thing a little more because you will also seed a new interface lead to content by 3% inch drive to a 2% inch connector.

it may also be necessary to modify your computer's case.

I would think your best bet is to go for an external SCSI hard drive because you cannot fit a SCSI

cannot fit a SCSI hard drive internally on an A1200. The difference between SCSI and IDE drives is

an A1200. The difference between SCSI and IDE drives is that IDE drives have the interface electronics built into the drive, while SCSI drives rely on an external interface such as

the Squirrel. Therefore, just owning a SCSI interface is not enough. The Squirrel is a very good solution because you will be able to easily

You want problems solved, you've got problems solved

fit your CD-ROM drive and an external hard drive. With all this extra hard drive space you may want to repartition your internal drive, giving yourself a Larger Workbench partition. Depending on the size of your external SCSI drive, it may be a good idea to use the entire 120Mb as your Workbench partition.

positionic.
The easiest way to do this is once you have set up your Squirrel with the external and drive, you will be able to drig over your entire Workbarnch as Squirrel workbarnch and then repartition the internal IDE drive. Doing this destryors all the data on the drive. If you now boot using the Squirrel will be squirrel workbarnch and the squirrel workbarnch and the squirrel workbarnch back over to the new internal partition internal partition.

You will never regret owning one of these even 1Gb drives are not very cheap

MAGE PERPLEX

I have an Amiga 1200 with an 850Mb hard drive. Last June I installed Image FX onto my DH1 partition and deleted it two months later as image processing is not really my scene.

The problem is that now when I load some Fo ufilins, I get the message 'please insert inagetY = cancel/retry.' Then the program loads with no further problems. Sometimes I an asked for the AmigaGuide library but this is in w Libs diewer.

Thave tried SnoopDos but am unable to find which libraries or files are missing. By the way, I deleted ImageFX by highlighting the icon and deleting it from Workbench.

Adrian Bernascone, West Sussex

My first reaction would be that ImageFX may have added an extra path in the user startup, but as far as I know it only adds an assign and a new drawer in the Env: dectory.

Generally, when you install software, using the normal Installer program we use on the coverdisks, many programs add a few lines to the user-startup file which is found in the S drawer. Usually this is limited to an assign statement, but some programs such as MUI can add quite a lot. This all means that when you come to

This all means that when you come to removing a program from your hand offer. It commonly a program from your hand offer. It directory, but also removing its related lines from the user-statupy—not the most friendly way of working. I know. This is a problem with the Amigra's assigns, and you can blame Commodore for not implementing some sort of assign demon that sits in the background of assign demon that sits in the background and programmers for not using the PROCDIR assign more often, which could potentially do assay with assign.

The best advice I can give is to tell you to carefully check your User-Startup, Shell-Startup and Startup-Sequence for any mention of ImageFX and remove it from these files.

As for the AmigaGuide library problem, there are a couple of version doing the rounds – one is for workbench 1.3 and is around 70k, the other is the one you get with your Workbench disks and is around 20k.

STUPID FRANK

l am 5' 10' but am standing in a pool of 5** 6'
0' deep. Before I go any further I have
a A500- with 64th and a 120Mb GVP hard
drive. I've had this lot for about five years
doing bits of DTP, invoices, work sheets, bill
heads and stuff like that, and have never bothered
about how and why things worked, just as long as they

did. Last week I could not go out because of a chest infection, and being at a bit of a loose end I thought I would tidy up five years of hubbit hat had accumulated on both DHo and DHI. I went a bit silly deleting files I thought I did not need, but obviously some of those I deleted were definitely needed because when I went to boot up from the hard drive all I got was what looks like a CI screen with:

AmigaDDS copyrightD 1985-1991 Commodore-Amiga

I had the stuff I wanted backed up on floppies, so in my little tin pot way I thought 'No problem, I'll just reformat the hard drive.' That was mistake number two. Number three came when I tind to get everything back with Quarterback – a coverdisk back in December 1995 – but this just seemed to make things worse. Could

you please tell me what to do to get back to normal, and I promise not to be stupid ever again. Also, please inform the rest of your readers to follow the great American saying: "If it aim tooke don't fix it"

ke don't fix it'

Stunid Frank, Manchester 's

Oh dear, it looks like you managed to get yourself in a right mess here. I will start off by saying it is a good idea to go through your hard drive and remove old/unnecessary files, as long a syou do not start trashing the system files. This is one reason or always having two partitions - one containing all your Workbeach files and the other for your deyloday work files. If you then delete stuff from your Work partition you will not damage amy of them.

your mistakes. The first priority is to get your Workbench back up and running. Assuming, from what you have said, you have completely formatted your drives and there is nothing of use left to recover, you will need to boot your computer with your original Workbench disk. Once Workbench has loaded you will see your now empty had drive partitions. To get Workbench set up as quickly as possible, and assuming you do not have any hard drive install disk. On the does have any hard drive install disk. On the

following.

Select your DH0 partition and do a quick format on it to make sure it is completely empty

 Open up the Workbench disk's icon and select 'show all files' from the Window menu
 Press the right Amiga and A keys, to select all the

files in the Workbench window

4. Holding the shift key down, drag all the files over
to your DHO partition

5. Once all the files are copied, reset your machine and Workbench should bootup from the once

oetunic arms.

This will give you a working Workbench on your hard drive, but it does not do much to get your lost files back. If you cannot get any files back from the backup you have done then there is very little you can do in retrieving the old files. It may be possible to use something like DiskSalv, but if you have formatted the drive and written back over it then there will be very little left intact for DiskSalv to recover. Your only option is to reinstall your software from

A general rule to follow when deleting files is, do not touch your Workbench files. These are things in your C, S, Devs, Libs, L, Classes and Locale drawers. Just stick to removing old data files such as pictures and text, or programs you do not use any more.

SLOW 60s

Nemac IV, your so-called system inferedly game, doesn't work on an Arriga fatted with an 060 chip. This also applies to Breatliess. It is avortying trend that makes both the companies that write these games look very unordessional indeed. The 060 may only be used by a small number of people now, but some progresses and the 060 boards for the A100 arrive, this number will surely increase. It is amonying to find that speeding momen

upgrading your machines actually reduces the amount of software that it can run, and not the opposite. Publishers should maximise their markets and not allense highend uses. For compatibility is sensible, after all the PC does this in its support of lower-end graphics such as VCA as well as SVGA, but more powerful AGA machines should not be ignored. Som Smith, North Yorkshire

What we found when trying the Bitzard 1260 bead is that games such as Nemac IV and Breathless ran, but incredibly slowly. This is to do with how the 660 works, and is something the software programmers could not have foreseen. To stream line the 660 execution path, not all the 680x0 instructions are built into the 660.

Unknown instructions cause a trap and during the trap the emulation has to find the right emulation routine and run this function. In a trap the processor is in the Supervisor mode and no other tasks can run. This effect is visible by the mouse jerking around. The system will become more unusable the more unimplemented instructions are used by a program. If you buy the

Most programs run incredibly quickly, but one or two cause problems for the 060

Bitzzard 1260 you get a program with it called CyberPatcher that attempts to change the instructions in these programs to one that will not cause a trap, therefore making the program un at full speed. One such program is Mand2000 which goes from running at around the same speed as an A1200 to running almost three times faster than an A4000. Unfortunately, this patch does not have any effect on Nemac IV and Breathless.

You might like to know that Alien Breed

The Killing Fields also suffers from this
problem, but the CyberPatcher program
does work, therefore allowing you to run

the game on full screen.

The only real way around this current situation is to recompile programs especially for the 060 chip – perhaps the companies could provide an upgrade to 060 owners. The compiler would then make sure that the

code ran as fast as possible and remove it these speed problems. The problem withis fool-proof plan is that I am not sure any such compiler exists. There is, howeve a new C++ compiler coming out fro Germany called Stomet that can apparent compile optimised 060 code.

I do sympathise with how you feel - wh he A1200 first came out many programs straight over. This was them either dis supply things to the chipset or it was the use of self modifying code that chalced have always complained when software not support accelerated machines and have when the complained when software not support accelerated machines and have inviews. If they do not do this, what is i point in upgrading in the first place? The di thatation is an unfortunate, but unavoidal one and you really are at the mercy of a strained or the contribution of the contribution of the servisions of the original.

SLOW SCREENS

Iftoght my current setup was all that I would want. I have an Amiga 1200 with 8Mb FastRAM and a Viper board with an FPU. I mainly use the Amiga to access the Internet and for playing pmss. Lorginally got more RAM because I found out that the screen slowed down when a lot disindows were opened. If times it go so bad that the mouse would sometimes hardly move, with comounter would freeze and this was with MAMs sometimes still available.

I may have got it wrong but I think I might need a graphics card or something. I wondered if you could help me out by letting me know what I need, and the rough cost.

Mark Williams, williams@madmark.demon.co.uk

ulationately, you are pushing the Amiga's graphics to the limit. To correctly redraw the toubleach scene every windown each to be refreshed, and with a lot of windows this into its take a long time. A graphics card would help the situation as they use their own the speed bitters, but one only available on high but Amiga. You do not say what propare you are running or what cereal moder you are unifor a string and processor. The control was to be a midga a processor limited programs when the string a processor will be the string and the string a processor will be the string and the string a processor will be string the string and the string a processor will be string a processor will be string and the st

The best way out of this situation is to run as many programs as you can on their own sceens. With the introduction of Workbench 2 this became a lot easier with the use of public screens, and just about all programs allow you to open a new screen or run them off an eighter screen. This will leave your Workbench as clear as possible, and therefore your

windows will redraw as fast as possible.

as you have a problem? Do you constitues I and you cell private of over your Amiga with axe in hand, spouting professing of the stabbon refused of your coffware or hardware to helware properly. Well, coint down and weap the your problems, along with a description of your Amiga setup, and send if of I of Amiga Computing Advice Service, 100 Cheb., steels between Adington Alternatively, c-mail us at Alternatively, c-mail us at AACS accomptonen cash.

HELP PLEASE

I recently replaced the Commodore installed 200Mb Seagate IDE hard drive with a 1080Mb Seagate AT Fast IDE drive, and I used the standard 30.0HD Tools on the install floppy disk to format and partition the new drive. The

Everything seemed to be normal as everything copied over correctly, but when I came to an programs such as Brilliance, I get the requester 'Unable to open your tool, Brilliance' or the name of the program I

I have tried everything, checked the partitions, rebooted, and even reformatted and copied the software back onto the drive to no awail. I then tried to copy the programs from their original floppies and voilâ, they all worked perfectly. This is obviously very tedious and makes backing up programs to my Sysquest pointless. I suspect there is a problem with the copy function from one dive to the other, even though I use the 'all' statement and it only affects tools, since Workbench and all other utility directories

operate normally.

I need your help. The Amiga is an orphan in America and I cannot get an answer. The drive manual refers to PC installation only, and all technical support personnel are programmed for PC-related problems and seem to have no Amiga knowledge what

William Trotter, Metairie La, USA

I am afraid you are not going to like my reply too much as unfortunately. I have no idea what your problem could be. The frustrating part is that we have just installed a 1.5Gb IDE drive to

our A4000 and are now having the same problem. At first we thought it may be the Maxtransfer rate or the Mask that you can set through HDToolBox, but none of these seemed to have an effect.

I found that using the copy command from Shell did copy the programs over so they worked, but this is still a very unsatisfactory situation to be in as we cannot use Workbench or Dopus to move programs around. If anyone has the solution to this problem then please send it in.

HOME INSTALLATION

I am one of those individuals who still has an A600m with a 120Mb hard drive. The hard drive has recently refused to work – the computer appears to think it no longer has one. The physical installation looks OK and when

lay to use install v2.05 it seems to correctly prep the flo, but cannot format it. Instead, the following message appears: Warning: Hard disk partition WB 2.x cannot be fund! This script formats partitions WB 2.x cannot be fund! This script formats partitions WB 2.x and Work. Mike sure the drive is properly connected and prepped, and the partitions have the correct names.'

Any ideas, except buy a new hard drive?

Robert Mitchell, Ireland

As long as the hard drive is installed correctly, and you can hear it power under the would think your best bet is to try and format the drive by hand as all the propus ou need are on the install disk.

This involves using a program called HDToolbox.

d

When you first run the program go to the 'Change Drive Type' and define a new drive. If you now read

the drive configuration you should see all the differ- want. I would stick with the normal Workbench and

ent parts of the drive such as the manufacture, how many cylinders there are, heads, and other information you should not change. It will also work out how big the drive is from this information – this should be around the 120Mb mark.

should be around the 120Mb mark.

If you click on OK and return to the main menu,
select partition drive. Here you can select how big
each partition should be and how many you actually

Work partitions, and make the Workbench one about 15 to 20Mb. You should also make sure Workbench is bootable and that Work is not. Now select OK and save the changes to the drive. When you quit the machine it will reset and you will need to boot up with the install disk again. You will then be able to, if that worked, install Workbench using the installer provided.

A 100th issue deserves something special, and this month's public domain and shareware selection would certainly seem to fit the bill. Honourable mention this month goes to the latest version of ClassAction, version 2.7 of which I seem to remember reviewing a while back. ClassAction creates an Appleon which can trigger all sorts of different programs when files are dropped onto it. Version 3 not only implements the Commodity controls properly, but also uses the incredibly popular Magic User Interface. The Preferences program, which is used to define exactly what actions are performed on given filetypes, also includes a 'Learn' mode which allows you to teach ClassAction to recognise various file formats. ClassAction is an extremely handy utility to have knocking around your Workbench, and is available either from a PD dealer

an air of quiet inquisitiveness, or something

LIARS

Produced by: Nerve Axis Available from: OnLine PD Disk No: OX302A/B

Liars is not so much a demo as, well, a public information broadcast, or somethic Dispensing with the customary wibbling shapes and generically cheesy dance tunes (at least until near the end), Liars attempts to deducate the world at large about the full extent of the nasty American government's involvement with Jaien zaces.

Apparently, the Americans made an agree ment with alies over 30 years ago, agreement with alies over 30 years ago, agreement with alies over 30 years ago, and the ment with a single profit of the property of the property of the profit of th

Nerve Axis, his driver shot him on that fateful day in Dallas. Whether or not you believe the rather amazing claims made on this disk is up

The state of the s

Liars: Believe it if you dare...

to you. Liars doesn't feature stunning graphics, and it doesn't offer much in the way of visual excitement or sonic fulfilment. However, it's nice to see a demo that attempts to do something slightly different, and even if you come to the conclusion that the whole thing is just a figment of some bored individual's imagination, Liars still makes an entertaining read.

....or if you're just gullible

YAM

Programmed by: Marcel Beck Available from: Aminet (as comm/mail/yam12.lha)

O Yet Another Mailer: but at least this time it's one of the best around

The Magic User Interface plan for world domination continues apace. Hot on the heels of the superb

continues apace. Hot on the heels of the superb AmFTP and AmiRC packages (which will, of course, feature in the new Aniga Internet bundle) comes Yet Another Mailer, which also uses MUI and consequently also boasts a stunningly attractive and easy-to-use interface.

YAM also has an impressive range of features. The address book facility is well implemented, and the configuration screen is fairly straightforward. There is a built-in UU encoder/decoder, meaning binary files can be sent and received. There's even an ARexx port, so other programs can control YAM — AMosais for instance and script files can be used to run mailing lists.

Interestingly, YMM does not use external programs to be sent and recoker may unlike Vextoo, the mailer Amiga sent and recoker may unlike Vextoo, the mailer Amiga Technologies chose for their bandle. This makes YMM incredibly easy to set up and use. Liferiormately, as for a set ict as set if may also mean YMM is of no use to set lemon subscribes because with Demon, uses receive their mail using a different system to the one YMM supports. Still, if you use another service provided (or if if there turns out to be a simple very around this), then 17 distoracy incremental extern field of VMF.

ASKBAR 4.29

Programmed by: Robert Ennals Available from: Aminet (as util/wb/taskbar4.lha)

Windows 95 eh? A multi-million dollar advertising campaign, total media saturation, that dreadful Rolling Stones tune... and all for a piece of software that simply enables nasty PC compatibles to do what the Amiga and Apple Macintosh have been doing for years. And it doesn't even do that very well.

Still, some people like the odd thing about Windows 95. Robert Ennals liked the taskbar feature so much he wrote a program that simulates it on the Amiga.

Taskbar can open on any public screen you care to specify it makes a thin fittle bar appear across the bottom of the screen, displaying current tasks and allowing you to flick instantly between them with a simple falch. It can launch tasks from the start bar and is easily outstomised to suit your personal needs. Taskbar automatically adapts itself to the forst and screen mode of whatever public screen it is running on.

This fourth incamation, which boasts a number of significant improvements and bug fixes over the popular version 3, weighs in at a handy 32k, meaning it's ever-so-slightly more memory efficient than Windows. If you don't fancy having a Toolmanager dock floating around, Taskbar is a shish alternative.

BOMB (BATTLE OF THE MASTER BOMBERS)

Programmed by: Silicon Circus Available from: Aminet (as game/2play/bomby1 2.lha)

The antivibut appallingly named BOMB is a Romberman/Dynablaster clone, which happers to have won a competition in a certain nul magazine. However I won't hold that against what is an otherwise magnificent

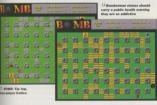

I must confess that in my time I have par ticipated in rather too many late night Bomberman sessions on the MegaDrive to atomach any clone without a hint of suspioon. Copying such gaming perfection with any degree of success is invariably a tall order, and is rarely achieved. The AMOSwritten BOMB is definitely one of the better

attempts Although the game does have a oneplayer mode, the real fun comes when up

to four players participate in a highly chaotic bomb-fest. The objective is simply to blow up your opponents, but if you've never experienced a good Romberman clone, you really don't know what you are missing. It is probably the greatest

multiplayer game in existence This demo version of BOMB features plenty of power-ups, fast and frenetic gameplay, and hours of irritatingly addictive entertainment. However, for a paltry fiver you can register with the authors. For your trouble you'll receive a version featuring even more power ups, a serial link option incorporating 'Widescreen Large-o-rama', league and cup competitions, and all manner of other tasty titbits. Cool.

YOU OUGHTA KNOW

Frustrated by all this talk of Aminet? Irritated that you don't have a modem with which to access this vast on-line software archive? Despair no longer, for Your Choice PD now offer an interesting alternative

The idea is that you order their two-disk Aminet catalogue for a quid, sift through the index of files available on-line using the attractive interface, and write down the archives you'd like to get hold of. The next step is to contact Your Choice, who will download them for you at a cost of £1.50 per disk. Since everything on Aminet is archived in Lha format, a fair few archives can often be squeezed onto an 800k floppy. so the service should offer very good value for money. Your Choice say they'll even update the catalogue disks free of charge. Isn't that nice?

Garing the joys(7) of Windows 95 to

BORIS BALL

Programmed by: Available from: F1 Licenceware Disk No: F1-133

Admittedly, there are far too many Breakout clones already in existence. Practically every programmer has probably attempted to create one at some point, and fortunately, as with so many simple ideas, the result is usually a highly entertaining game. Boris Ball is no exception.

The graphics are smooth and effective and the sampled sound effects are nicely done. There are also ample bonuses to keep the gameplay interesting, ranging from ones changing the size of your bat to those giving you extra balls and suchlike. You can also have lasers mounted on your bat with which to demolish more blocks, confusing bonuses which reverse the direction the mouse must be moved in, gravity bonuses which suck your balls towards the edges of the screen, level clearance bonuses, ones which allow the ball to pass through all the blocks including the metal ones... the list is seemingly endless.

There are five different speed settings and there's even a handy built-in help mode which will remind you

what a certain bonus does when you are in the thick of

the action. And if by any chance you should tire of the 100 levels which are provided, you can create up to 100 of your own using the built-in level designer.

OURMET GURU DEMO/WINE STEWARD

O Very nice... but

nive me a Chicken Biryani any day, with

Nan and stuff

a side order of Manua

Programmed by: Len Platt/Mike Richan Available from: Roberta Smith DTP Dirk No: OS221

Gourmet Guru offers the perfect solution for flustered folks planning dinner parties. It allows you to build up a complete database of recipes, which can then be searched using a variety of filters: for instance, you could ask it to suggest a recipe for six people, or one involving Coriander.

Gourmet Guru has a colourful and attractive graphical user interface, and there are enough example recipes supplied with it to get any database off to a decent start. There is also a built-in Bartender offering a wide selection of cocktail recipes, and a wine list. although this only has a couple of entries included.

As a result, Wine Steward compliments Gourmet rather nicely. Once you've picked a meal it can be used to suggest a suitable wine, briefly describing the wine and offering various helpful details. Although rather primitive in presentation and design, it's not a bad effort. Both programs are shareware, although the Wine Steward demo is probably the more crippled of the two in that only a few wine facts are actually given

in comparison to those in the full version Gourmet Guru is a strong title in its own

right and for that reason keen amateur chefs are advised to seek out this disk

UITAR FRETMASTER rogrammed by: Bob Stanley

Available from: F1 Licenceware Disk No: F1-132

Guitar Fret master is a friendly and well designed tuition tool. Its basic purpose is to teach you to play scales, whether they be major, harmonic minor, melodic minor, modal, pentatonic or extended pentatonic. It also teaches arpeggios, and there are numerous drills, starting with basic ones and working up to the introduction of Dire Straits' Private

Selecting the scale you wish to attempt causes various coloured blobs to start appearing on a graphical representation of the fretboard. indicating precisely where each finger should be at any given moment. You can also optionally have your Amiga produce the note you are supposed to be playing. However, I can see this being more of a hindrance than a help because the note is a rather tinny internal effect as opposed to a sound sample.

Also included on the disk is a large AmigaGuide Guitar file. This includes plenty of fascinating background information from the history of various types of guitar right through to instructions for tuning up, fitting strings and generally caring for your instrument. The explanation of guitar tablature is sure to be helpful, and there is even a guick glossary of guitar terminology. This guide makes for a handy addition to a very useful disk

to play the guitar using an Amiga program. Or so

BREED 96

Programmed by: Damian Tarnawsky Available from: Aminet (as game/misc/breed96.lha)

Cross Sim City with Dune 2 and you'd end up with something similar to Breed 96. Your task is, essentially, to build and run a space colony. meeting the needs of the inhabitants and protecting it from alien invaders.

Breed 96 is a brilliant strategy game which offers a wealth of gaming possibilities. Your first priority will surely be to ensure there are adequate residential facilities and your inhabitants have sufficient food. Then you will have to establish law enforcement agencies, make sure the employment level doesn't soar, and ensure there is ample electrical power to keep things running nicely. On top of this, new technologies can be researched, trading alliances can be formed with neighbouring planets, and interstellar wars can be waged.

The graphics are suitably dinky and detailed, and unsurprisingly are rather reminiscent of those of Sim City. Some nice animations are also included - whilst you go

about building and managing the colony, traffic crawls around your road network ships dock and unload their cargos, and alien droids rampage around the outskirts of your

settlement You can save your colony to disk at any point and continue the game at a later date. and therefore you will probably become quite attached to your little world. It is the sort of game you can totally immerse yourself in for hours on end, and is also another example of an excellent game written in the

all too frequently belittled Amos.

ntil Workbench 2.1 came out the Amiza came with speech support. and after that Commodore probably saw a way to cut expenses and dropped the narrator and translator Ibraries, so removing this speech support. To be honest, for most people there would very little lost, but for visually impaired people speech would be of great help.

SofTalk is a drop-in replacement for the old sarator device and translator library, and as long as a program can access them in an OS letal way all the old speech functions will work correctly. The new SofTalk files add extra functionality to the old Arniga speech and, in combination with the PhonMaker and TransMaker program, allow you to create new speech translation files. This allows different sounding voices to be produced and for Afterent languages.

Once SofTalk is installed off the floppy, any program that can make use of the old Amiga speech libraries will now produce speech via the new SofTalk software. Multiple channels. variable pitch, speech rate, slur, stammer, lisp and a number of other controls are all available, and the major point of SofTalk is that you can define your own text to speech

translation via two extra programs. The software does claim to give better quality speech than the standard software, but the output is still the same sort of 'robotic' voice like the original Amiga speech. Your

main reason for buying SofTalk would be if

you needed speech on a Workbench 2.1 machine, or you wanted the extended configuration that is possible via the PhonMaker and TransMaker tools

It is obvious that the author has spent a lot of time writing the manuals as they do go into great detail about the theory and techniques involved in using computers to translate written text into spoken English.

The two extra programs you have to purchase separately to the SofTalk software are not essential and are there so you can change how the computer sounds. If you are thinking of trying to do this then you should not expect to get results straight away because both programs are complex, due to the subject they are dealing with, and can therefore cope with whatever request made. At the end of the day, you will know if you ...let your Amiga talk to you with this new set of speech tools. Neil Mohr takes a look at what's available

> need this sort of software, as it is very specialised. The extra configurability is there but it will take you guite a while to get good results. and the standard speech is no better than the Amiga's original.

RANSMAKER

When the Amiga translates written text into spoken text it uses codons to apply a corresponding sound to a section of text. When you pass a sentence to the translator it splits it into smaller and smaller sections until a match can be made in a

When a number of codons are placed together you can recreate spoken words. TransMaker allows you to create and edit your own codon tables for use with Saffalk, and this allows you to produce a much better conversion process, as specific words can be given their own codon.

One subject that is covered in great detail in TransMaker documentation is how to code your own language parser. This is the code used by the translator library to translate normal English text into the sets of codons. As a tutorial it describes how the default translation code is written, but suggests that many improvements could be made by anyone

see of voice, you can change it

At the end of the dav, you will know if vou need this sort of software, as it is very specialised

Bottom REQUIREMENTS

1 Mb Workbench

PHONMAKER represented by codons.

The second part of generating speech on computers uses phonemes which are the smallest recognisable elements of speech and are

The phonemes are strung together to produce the actual word. This is very difficult to do as you are trying to model the complex mouth, tongue and larynx movements that produce speech, but using simple algorithms. The default phoneme set has 40 such basic sounds that represent transitions from one sound to another, and when used in the right order a word can be produced.

PhonMaker allows you to create either extra, or completely new sets of phonemes, and is easily the most complicated program of the three. You do get three good manuals that outline aspects of phonetics and how to use each part of PhonMaker but even so you will have to do a lot of play-

ing around with PhonMaker before you will start to get good results. C It looks complicated

and it is complicated

OPEFUL PRESS RELEASES

Copperhead Technologies announced in our Dec 93 issue that they were offering an A1200 upgrade for A500 owners that would allow them to have access to AGA and the IDE controller and trandoor expan-Gigatron announce a portable Amiga in our March

1990 issue, it was supposed to be shown at CeBit that year, but as our report in the July issue states, they were nowhere to be seen. Nothing has been heard from them since

Although the OpalVision board had been out for quite a while and was reviewed in our 54th issue (where the add-on modules were promised RSN), it wasn't until our 83rd issue that we printed a press release that stated that the fabled Roaster chip was going to be available at any moment, and that peo-Roaster chip was finally shown in a flawed form that year at one of the London Amiga shows, but it never appeared on sale, nor did the other modules like the flicker fixer, TBC, etc.

Our 82nd issue in January 95 had a company called Computer Answers announcing an Amiga compatible with 030 and Akiko chip. Whatever happened to that?

Overall - 109%

You can only get away with this sort of thing on a very

BITS AND BOBS

Our August 89 issue carried a review of Vortex's System 2000 external 40Mb hard drive for the A500 (cost 573.85) and we said 'Most users will find 40 mees more than adequate for their needs'

 We were even more prophetic in our January 1990 issue when we reviewed the SvQuest 20Mb removable (without a SCSI interface: 1220) 'this is a pointer to the future. We will all have hard disks in a couple

of years' time. Removable disks can wait until the mid-1990s' We gave the drive 59%. Our March 1990 issue carried a review of Battle Squadron. Stewart C.

Russel concluded his review by stating: "Everyone went gaga over Xenon II, and rightly so - it was the best available then. But now Battle Squadron is the best. Xenon II scored the perfect 100 per cent. How can we express that Battle Squadron is even better? Hmmm. I'll show you how.

Our thirtieth issue way back in December 1990 carried an ad from Greater London Computers offering an A3000 with a 100Mb hard drive. a multiscan monitor and 6Mb RAM for just £3793.85.

. Issue 34 carried a news story from Howard Newmark, then head of The Software Business, who stated that in the future all games for the Amiga 500 would come on a cartridge his company was creating to stop piracy. It never happened.

• We reviewed the Courier HST modem in our May 91 issue. This 14.4k modem then cost just £1144.25

based Sundies. The Was, the West allow the Yinksed Sounders DePaint III, Microprose Grand Pris, Putty and PushOver for £34 and Epic and Language lab bundles also have a hard drive and different software for £499. We also heard that a new fection had been started in Irvine in Scotland and that the 44000 would be on sale by the end of October. The A2200 has off the control of the A2000 has off the A20

Maste

ell, we had a resounding success with our latest reader survey, and f'm glad to see that most Amiga sowners are actually intelligent enough to work out where to send their entries, even though we purposcielly didn't include an address to send them to, honest. Actually, we slways knew that you lot were

brighter than the average Amiga user, and probably a bit more mature, and the results we have collated bear this out. There are very few of the did unexpanded Amiga fraternity content to spend their hard-earmed merely on games and a joystick every year, and most of you seem to be quite propaged to lavish a fairly large amount of mindrey.

on your mathless twen the course of the next year. So let's have those results then shall we'll facine as no surprise that the matchine that was melt project and unwast the Alloya's Greefy's followed by the Alloya's for its fact, quite a let of you seem eager to actually own more than one machine, which would obviously mean that a network port as than-der on an Asing a would prove to be a popular decision on A's part. Even more pleasant in order of the annual project and the part of the annual project annual project and the part of the annual project and the part of the annual project and the part of the annual project annu

The fact that most of your are using Al 200e is borne out by the processor stats showing the year majority of people using an QS. Junnily snough, though, the figure for QS usage is actually only just bigger than flat of QS. meaning you all must like upgrading your 1200s, a fact which is also shown by the statistic that Says that nearly half of you own an FBU of one description or another.

TREETS AHEAD

The number of CD-ROM drives out there is also surprisingly high, especially when you consider the dearth of really good CD-based software, but very nearly half of our readers actually have a CD drive. Maybe you all use them for playing music most of the time. like I do?

Comms was an area surprisingly undersubscribed to, sepecially considering how busy the aminet is, but it shows that we are actually provideing you with a service when we put Aminet retained to the service when you for the service see on our coverdisks. In the end, only just over a third of you have a modern, just over half that number have a 14.4k modern, and just over half that number also havgamittement connection.

Perhaps because of the prepanderance of A1200 owners, there are very few of you who have graphics cards, although guits. Few stated that their favourite piece of hardware would be one of these high resolution output devices. This probably

CD ROM drives - seems you just

accounts for the fact that most of you who have a monitor still only have a 1084-type monitor, although the low-end and high-end multiscan figures put together nearly match the 1084-type. Disappointingly, most of you still only have a dot-matrix printer, although the inkjet/bubblejet camp is in a close second place. Only about 1094-1094 the low for the control of the control of

per cent of you don't have a printer at all, so let's keep those letters coming in please! That A1200 bias pops its head up again in the Workbench revision answers, with the overwhelming majority of you using Workbench 3.0. WB 3.1.

accounts for the next highest figure and thankfully. 1.3 only now accounts for 5 per cent of our readership. Even 30, this is far too many people. Get your acts together and upgrade!

As far as software is oncermed, it seems that were free of you actually does your fullings for CAD, but a large proposition of you actually does your factors and you factor of your factor of you factor of you are using Assigns for Joyden of your factor of you are using Assigns for Joyden of your factor of you are using Assigns for Joyden of your factor of you are using Assigns for Joyden of your factor of you factor of your factor of you

One of the set of statistics we found rather of the statistics was the fact that so may you find the magazine easily, until we realised should have worded the questionnaire slightly ferently to lake account of subscribes super. It's on my dogmat every inbuth. What we actument to ask was whellen those of you that do subscribe found, it easily in your local newsage but never mind.

SUBSCRIPTIONS

Of those subscribers we have, the majority of p have only subscribed for between one and ty years, which can only be put down to our n American and Canadian readers from the demist Amiga World, but we do have a hardcore of read who have been with us for over five years.

The last section of our survey dealt with the sis biological questions of what sex you were and he old. I think it's a shame that we have so few fer readers, or at least ones who were welling to sent their questionnaires, with only 2.6 per cent respondents wearing frecks; too removelegel; readers tend to be more mature than the degraphics would appear to show for other magain with a time and the second of the second part of the second of the largest section of are not become the second of the largest section of are not become the second of the second of

We've picked a winner from the huge sales of entities we had. He's a cith! year studes Tilbinust near Reading and he has three Amig an A300 an A300 - and A300 - and A300 entitle to 300 graphics and a let more. He's one of our \$2 societ that don't have a -CRORM driver yet and desert have a modern. So If Stefan C Young will be to get in contact with us, we'll see what we do to give him a copy of his most wanted pact—cinematol.

So, thanks very much for providing us with information we need to continue to make Am Computing the best magazine on the shelf and can look forward to seeing changes based on y desires in the near future.

The results are in, the data's been collated, but just who has won our ace prize of a fortnight for two in a bin outside the MacDonalds in Clacton on Sea? Ben Vost will reveal all

he Amiga Guide section, ready for a revamp?

Our letters pages seem to be very popular, but

AMIGA COMPUTING

DOSSIN

living a student I was privileged enough to have access to free high-speed access to the Internet, all thanks to the University I went

to and paid for by the good honest tax payer. get connected from home, money can start to play a key role in how long and how much you can participate. It's all fine and dandy for computer journalists and the big cheeses at large computer corporations to sing the Internet's praises if no one else can afford to get on line.

A large part of your total expense is going cial offers with BT, Mercury or a local cable network company, possibly the most practical way of cutting bills is to buy the fastest modem. Ten or 15 years ago a 2400bps modem would have been considered an absolute luxury, but at these speeds a page of text is torture to watch download, never

Jargon

If you are baud stupid, Neil Mohr looks at the cream of the modem crop to get you out of your on-line blues

mind storage hungry Web pages whose sizes can easily reach the 100s of kilobytes mark. Luckily technology never rests, and last year saw a plethora of 28,800bps modems swamp the market. These 'beasts' can handle around 3k a second on a good line and can make light work of downloading information on the Internet and bulletin boards. Recently, their prices have dropped dramatically so making fast access available to everyone. With most modems offering group 1 or 3 fax support along with some with fast voice/data switching there is plenty of choice for everyone out

and the single power button on the

the correct fax software

The Speedcom modern is one of the older modern models

in this roundup but speed wise it has aged very well. The

US Robotics have always been renowned for their quality modems and this latest one is no exception. The Sportster is a fairly compact affair, only marginally bigger than the Speedcom modern. The casing is made of a tough dark grey plastic and the whole unit has a very solid feel to it, and compared to US Robotics' earlier efforts the casing is styled quite well, with the usual bank of status LEDs funishing the front of the modern. There is even a stand to allow you to use the modern upright and a usefully positioned power switch and vol-

ume control are placed on the side of the modern

As for functionality, the Sportster has pretty much everything you would need, With V.42 and V.42bis error correction and data compression, as well as having the ability to send class 1 or 2 faxes. In use the Sportster proves itself to be one of the fastest moderns around.

The Sportster also has voice mail support which would allow you to use the built-in microphone and speaker to send and receive spoken mails using your Amiga. Unfortunately, no software exists to allow you to take advantage of the voice mail standard which is a shame. This is a great modern. It is very compact and

supports all of the current standards. The manual seems a little brief, concentrating mainly on interral fitting to a PC, but as there is usually very little involved in setting up an external modern it is not mally a problem. Probably the best BABT approved modem you can buy at this price.

S UPRA EXPRESS 288

Implementation

The SupraExpress is another tiny modem and comes in a fairly thin plastic case that does not seem very rugged and has only the barest of status displays on the front. However, it is meant to be a budget version of its big brother the SupraFax modern. A couple of real plusses for the SupraExpress are the five-year

quarantee that it comes with and the fact that Supra actually provide direct support for the Amiga. Admittedly, it is only an American help line, but there is

also a specific Amiga e-mail address. However, if you are having problems with your modem this might not be too helpful! I am not too keen on

the huilt-in modem cable that comes with the SupraExpress. It is long enough but if you need to replace it you are either going to have to send the modem away or face the perils of replacing it yourself which would mean

invalidating the five-

year guarantee you get

X-LINK

A newer modem to the market, the X-Link comes in a fairly plain box. The model we had was cream coloured, and the colour compliments the

Amiga casina, but a plain black one is also available. The case has a couple of feet at the bottom that can be pulled out to allow the modem to be placed upright. On most modems the front is adorned with plain LFDs with a couple of initials to show you what it is meant to represent, but as a change the X-Link modern uses illuminated

icons to indicate what is going on All the usual compression and data correction modes are supported. along with class 1 and 2 fax transmission and reception. Wizard can also supply the GP Fax software as part of the modern hundle for an extra E40. If you need to send or receive faxes then this is an essential purchase.

The X-Link modern comes with a very good manual that covers subjects from connecting up your modern to what every Hayes command is used for and how to use them to configure the modern. All the leads you need are included with the modem, and Wizard also throws in a bootable comms disk with Ncomm included. Therefore, you can start using your modem as quickly as possible. This is another BABT approved modem so you can use it on BT lines without fear of repercussions

ITAN

Another new modern from Wizard, the Titan is a very well priced, high-speed BABT approved modem. Being BABT approved is important point because only BABT modems can be used on BT lines, and only BABT approved modems can be guaranteed to work problem free

The casing of the Titan might not be the most attractive, but the metal casing gives the modem a very solid feel so it could probably handle a good bashing around - more so than many of

As with all the other modems in the roundup. the Titan has a small amount of non-volatile memory in it. This allows you to store modem configurations and up to four phone numbers in the modem's memory, and will remain stored in

the modern even when you power down Being a V.34 modem, the Titan supports all the usual baud rates up to 28,800 bps, and the usual V.42 and V.42bis types of error checking

and data compression, as you would expect, If you want the cheapest BABT approved modem the 14.4 version is excellent value for money, and as with all modems from Wizard you get Ncomm thrown in - which is perfect for connecting to bulletin boards.

Jargon

OURIER V34+

US Robotics Courier is usually taken to be the best modem on the market and this is reflec ted in its price tag, being the most expensive modem you can buy. The first thing that strikes you about the Courier is how large it is, being about as thick as many of the other modems but around twice the length and a good bit heavier too.

As you would expect. the Courier does the business speed wise producing the best in rates, which is only to be expected as

US Robotics claim the Courier is the only V every thing' modern available. By only using the

Rockwell protocols instead of using the Rockwell chipset, this allows the courier to support both the V.fast and the V.32turbo

protocols alongside all the standard modern rates With the normal set of status LEDs along the front of the Courier there is the voice/date

switch. This little gadget lets you quickly switch the modern between voice mode, allowing you to speak to the person on the other end, and data mode, where the two modems can transmit data between themselves. To use this, however, both modems need to have the

The Courier also supports adaptive spee levelling that allows it to select the best possible speed for transmitting and receiving date independently of the other modem Consequently, if the transmission rate drop you can still receive at full speed.

Overall, the Courier is the top-of-the-range modem and is the first choice for just about a the Internet providers, so features like adaptive speed levelling can be used when online to the Internet. The price of the Courier may seen high, but for the really serious comms user the modem will more than pay for itself in the long

What constitutes a secording studio? Well
what constitutes a secording studio.

What constitutes a recording studio? Well bere's a question, and one that doesn't have an easy asser. If you're into techno music then your system may be an Iniga with, say, the Bars and Pipes sequencer, a MIDI interface, a

tuple of multi-timbral synths, a simple mixer, and a cassette deck for mastering – perhaps £1,000 all in. At the other end of the scale, recording pop music with instruments and vocals would require an 8- or 16-track

sames, it will give you a reasonable idea of prices. So, on with the show!

necréer, a sophisticated mixing console, various synth modules, outboard equipment like reverbs, delays, gates and compressors, a selection of microphones, a separate both for vocals and drums – and a second mortgage to put that little lot together! Yep, you

could be talking about getting little change out of £40,000.

This feature will help you understand all the components of a recording studio so that we can decide what you need. While it won't present a procession of specific product

AMICA COMPUTIN

OUNDS LIKE MIDI

Finding a synth you're happy with is not an easytask. With so many available, confusing, ly-named sound generation systems and misleading polyphony figures are just the tip of the iceberg. So let's look at what is required of a good all-purpose synth.

The first thing is to try it at the shop to see if you like the sounds. If you don't then there's no point going any further. The next thing to look at is how many sound presets are available and how many user-programmed sounds can be stored internally. After a while you're bound to get bored with the factory sounds, so you want to be able to create and store your own.

Most modern synths are capable of playing in a multi-timbral mode This means that by using a sequencer, the synth can play a bass sound on one MIDI channel, a piano on a second. and strings on a third

- all at the same time This is very useful but quic kly uses up all of the synth's sound generators. A bass part will probably require just one note at a time, but add a piano, some strings and brass and you are probably asking the synth to play ten or more notes simultaneously. Polyphory is the measure of the number of notes or voices the synth is capable of playing at any one time. The issue gets more confusing because in many cases the synth uses two or more voices to generate a single note to make the sounds thicker and richer. Just knowing that a synth has 24voice polyphony is not enough - you want to look at how many voices are used to generate a typical sound.

Many synth models are available as keyto buy one with a good keyboard and then add sound modules as required. The synth with the keyboard will be your master keyboard, used to play all the sound modules. sampler and other MIDI devices in your studio, so look for a keyboard that feels right. There are several features to look for. First velocity sensitivity is a must. A keyboard that doesn't respond to how hard you play will create monotonous and lifeless music. Aftertouch is less important, but can be just as useful. It works by allowing you to modify the sound by pressing the keyboard harder after your initial touch. Typically, aftertouch is used to add vibrato, filter sweeps, or other effects to the

look for the modulation and pitchbend wheels. Some synths feature a handy usercustomisable slider that can be used to control and record volume changes, for example. Another factor worth

considering is the number of audio outputs available. Most synths have a steren output but some support

Quality percussion is a problem in any home set-

additional outputs so you can separate a bass sound, for instance, from the rest. This is useful if you want to use different EQ and effects on the bass part, Finally, if

you intend to buy or swap MIDI files, GM (General MIDI) compatibility is useful because it allows song files created on one system to be played on another with the minimum of hassle

A sampler is a useful addition to any MIDI set-up. Although not essential, and generally more expensive than the average synth, a sampler can reach the parts other synths can't! With a few drum and percussion samples, your sampler becomes a dedicated drum machine. You can also use it to pinch short sections from records and loop them (well dodgy!), or to emulate the sounds of orchestral or oriental instruments. The main factors, apart from sound quality and polyphony, are the amount of RAM and hard disk space, and how upgradable they are. A drum machine is also handy - check out

the Alesis SR-16 but less important if you have a decentsounding drum kit sampler.

HEARING IS RELIEVING

You need to hear your music as clearly as possible. This means you'll need a good power amplifier, a set of speakers, and a pair of headphones. If you're on a tight budget you could use a Hi-Fi stereo system, but there's no substitute for decent manitaring equipment. Most Hi-Fi systems tend to colour the sound - mixes that sound great on your

A good amp and speakers designed for studio use has a flat frequency response and a clear, well-defined sound. When shopping for a power amp, get the most powerful one you can afford, with 150W per channel as a working minimum. There's a wide range of speakers on the market. Speakers can be you watt (dB/w) and the higher the figure the betrate drivers are generally better than two-way

When recording vocals or accustic instru you try to use the speakers you will have to spillage - and cost unwords of £100 Check your mixes on a variety of play-back

ASTER!

The last stage in the recording pro the mix. All the channels are ba and EQed. Effects are added and the fi stereo output is fed into a stereo m ing device. In the old days, people us use a 1/4" or 1/2" reel-to-reel, bu standard today is the DAT mach Originally designed as a con uct, it found a home in the ri dio due to its superb audio q is recorded as digital inform small cassette, similar to the small cassette, similar to the one's ore camcorders. Tape length varies from 6 120 minutes. The more expensive mo (£1,200 and more) offer extra feats and better sound quality, but even cheapest models (about £600) soun least as models a demostly CD player. An alternative to a DAT would aligh-quality cassette deck – and yo robably want one anyway so yo ske copies of your final mix to play to ters. The cassette is not an ideal forma audio quality is relatively poor and se can degrade very quickly.

hand

is vital If you're aimi

O TAPE OR NOT TO TAPE

Your most expensive purchase is likely to be the centre of your studio, a multi-track recorder. There are three cotions here; analogue tape; digital tape; or direct-todisk. Analogue multi-tracking is a system that dates back to the 1950s. The tane width is divided into a recording. So, for instance, a Fostex R8 solits 1/4" tape into eight 'strips'. You'd be amazed what can be achieved with eight tracks - the early Beatles albums only used four tracks, and even Sergeant Pepper was

recorded on just eight tracks. Analogue recording Firstly, the nature of magnetic tape means a degree of hiss is created on every recording. Secondly, mix ing, say, three backing yoral tracks together onto a single track commonly called 'bouncing', results in a poorer nals. Also, such a system will probably have to be obtained second-hand

Digital multi-tracking seems to be the direction in which the medium budget market is moving. Starting with the eight-track Alesis ADAT system and the lookalike Fostex RD-8, a studio can now have eight tracks of sparkling digital recording on a standard S-VHS cartridge. You can even use more than one unit to get

multiples of eight tracks and have them running in time with each other by the addition of a small external piece of hardware.

Disadvantages? Very few, aside from the price tag - around £3,000 against an equivalent analogue system costing around a quarter of this second-hand. Play-back quality is stunhave too many noisy items in your system such as cheap synths and effects units.

The third possibility is direct-to-disk. This may be based around a computer system, or can be a stand-alone product such as the Fostex DMT-8. Fifteen hundred sovs will buy you a digital workstation with eight track capability, a 540Mb internal hard

Higher than CD

disk for about 12 minutes'-worth of

eight-track recording, cut, copy and paste editing similar to working with a MIDI sequencer, two-band EQ. and a fully-functional eight track mixer. This would cut down on the cost of a decent spec mixing console. Other companies are also getting involved with such products such as the similar spec VS-880 from Roland.

Disadvantages? In a word: backing up. The DMT-8 has no expansion port for a second hard disk so you have to transfer your song data to a DAT recorder once the internal hard disk is full. This means relying on a tape-based medium for long-term storage. The VS-880 has a SCSI socket to which you could attach a CD-R recorder like Yamaha's CD102 and so burn the data to a CD - a more reliable option for those with more

THE MIX

Your mining desk is the nerve centre of the recordina studio. Ideally, all your microshoped into the desk along with the inputs and autouts of the multi-track recorder. Using the desk you can adjust the volume of indisidual instruments, change the sounds by using the equalisation (EO), and add effects

Most mixing desks share a similar design where each strip on the desk represents one ado channel - but there is no relationship between the number of channels on the desk and the actual tracks on the tape. In a typical too while your sequencer guns in sunc with the tape. This allows you to have your MIDI whout occupying precious tape tracks. The tape outputs all your

1.2.2.2.2.2.E.B

synths, and

Each channel should offer some EO to allow you to control the sound. FO of bass and treble knobs, such as those you would find on any Hi-Fi. If your budtures a mid-range control with a sweep facility. This addition can make a vast difference to the end result, giving you fine Many microphones require external power,

samplers in this set-up must be connec ted to the desk which means your desk

Apart from the number of char number of auxiliary sends, also These are used to feed a on more than one channel at a time. The number of

effects sends determines the number of effects units you can use. Another useful extra found on some mixers are effects returns regard these as bonus channels. They norma-Ily lack many of the features of the regular channels, such as EO, but allow you to spare full channels for more demanding tasks such as getting a good sound on your drums and

mportant mixing lesk. If you can't run you ound through on EQ and mix the and result with the rest of the tracks

supplied by the desk via XI R connectors It's useful if the desk can supply this power, at least on some channels. The better mixers feature a set of insert points that back of the desk. Insert points are used to put an pressor or a noise-gate into the signal path - useful, but not essential. The meters are often overlooked by the beginner but the amfessional recording engineer knows their value. A good metering system allows

you to record at the optimal level

and get the best quality out of your

One additional item you should consider is a patchbay unit. This consists of a few rows of exchange. All the audio inputs and outputs in the studio go into the back of the patchbay. simply patching the two corresponding points at the front of the patchbay with a short lead. It may seem low-tech, but it'll make your life a whole lot easier!

For an eight-track system, you'll need a 12 or 16 input desk - and this will set you back between £600 (for a four group desk) and £2,000.

also known as phantom power, which is

AMIGA COMPUTING

ESTING, TESTING

Unless you're going to work solely with MIDI, you're going to need a microphone or two. There are two main types: dynamic and capacitor.

A dynamic mic diso known as a moving coll mic, has a small, vicular displaying ordered to a coll of where that fatted into a fight gap in a magnet. Sound received by the disphragin moles it move and gen otes an electric current that is amplified by a special mic pre- and it may be a seried or a seried or a seried proper and it may be a seried or a seried or a seried or a seried or a seried proper magnetic and a seried or a seried or a seried or a seried collection of the seried or a poor response - if it may difficult to record the healthy warm of a section. Check out the offering from Shave, Beyer Opmail and ACG.

A apparation minigation values open profilement and was the other from a start profilement of the profileme "...a good condenser mic will cost you upwards of £400! Favourite of the bunch is AKG's 414"

> They may not look to impressive but gos mics are an essential

SQUEEZING 'N' SILENCE

Listen to your favourite current pop song. Does the kick drum sound ultra-even? Are there any odd extraneous sounds anywhere on the record? Does the vocal sound extremely breathy and present? The answer to all three of these is likely to be "yes" welcome to the age of dynamic control!

welcome to the age of dynamic control! What are dynamics? In a nutshell, it's the range of sound, from the upstream the tange of sound, from the upstream the recorder or a castetle player, cannot cope with the kind of dynamic range that music produces, so the range has to be reduced. This is true even with most digital recorders — while a little distortion on an analogue machine may pass unnoticed, any degree of digital distortion will ring out like a

COMPRESSING

Top of the list is a compressor. As the name suggests, this reduces (or compresses) the dynamic range and tends to be used on individual instruments rather than across an entire final mix. Typical instruments that benefit from the heavy use of one of these are bass drum, bass guitar or synth, and

lead vocals, especially with an inexperienced singer. Compression to a lesser degree can also be used on most real instruments, simply to keep the recording level within reasonable limits. Avoid compressing MIDI synths — most realistic sounds have already

been compressed by the digitising process.
Most compressors allow you to use high
compression ratios, upwards of 20:1. This
prevents the output level from exceeding a
set limit, hence the name used for this
process – limiting. If you're intending to
record vocals and instruments, get yourself
a two-channel unit that provides both
compression and limiting.

PREVENTION

Noise exhibits itself in various different ways. Had disk white, addated building, workhood learn, and coulde- all are likely considered and the c

N CONTRO

If you already play a non-keyboi instrument like on electric guilt there are various alternative MIDI (as troulless wailable. Rolland sells and kit that works with any electric guit consisting of a special pickup and dedicated synth module. Other mas facturess offer a variety of MIDI or troubles. The nature of the recording process multi-effects device is probably tends to produce dry sounds that lack the natthe best compromise. ural echo and resonance of a room or a conent hall. A decent effects unit will let you

The nature of these effects require them to be mixed in with the sound. You would normally want to hear a mix of the dry sound and the reverb effect. Unlike compressors and noise gates which are normally connected via insert points, effects like reverb and echo are added by using the effects sends and returns on your mixing desk. Typically, a unit will have a pair of stereo inputs and outputs, but in most cases the left and right inputs are merged internal-Iv and you may as well use just the left one. The output, however, is true stereo on the majority of units and the stereo effect is crucial to the realism of the reverb. This output is usually routed into a pair of effects returns on your desk which should be panned hard left and right. If your desk doesn't have specific effects returns you will need to sacrifice

your mix such as the Alesis Midiverb 4. They can easily generate effects such as repeating echoes, ping-pong delays, pitch shifting, and avariety of doubling and flanging effects. All tiese can be used creatively to enhance the sunds you record. Automatic double-tracking (alled ADT for short), for example, can be used to areat effect on backing vocals to make them sound 'bigger'. Some units go a step further and can generate several effects at the same time. Such multi-effects units, such as the Alesis Quadraverb, tend to cost more but are very useful. Having one dedicated reverb unit and

will be added to it. This allows you to have a lot of reverb on, say, the snare drum, while keeping the bass drum sound

two channels for this purpose. An effects send works by feeding some of the sound into the effects unit which then produces the reverb or delay and sends it back via its outputs. By adjusting the amount of effects sends on the individual channels on your desk you can determine how much of the sound is fed into the effects unit and, therefore, how much effect

GIVE ME A LEAD

If you own a multi-track, some synths, a effects unit or two, a mixer, amplifier, and the various other items that go to make up a studio, you'll probably have 20 or so plugs to fit into, perhaps, a couple of mains blocks, some two and three way mains adaptors and cobble the whole lot together? No! Here's the right way to handle your cabling.

If possible, consider running a separate power supply from the fuse box to your studio and terminate it with an isolating switch. The advantage? A lack of mains borne noises such as clicks from refrigerators and other pieces of equipment turning on and off. The isolating switch allows you to cut all electricity in case of an emergency. If this is impossible, consider building some small boards with mains

Left and belo

Yet more sign

essing news

Use good quality mains plugs that have a plastic sleeve on the positive and neutral pins, and also use decent quality mains adaptor to pull half out - use a few extra blocks and avoid adaptors completely. And remember to label each plue with the

The total current being drawn by your equipment will be nowhere near the standard 13 amps that is allowed for by a plue ures for your gear (check the rear panels for each wattage) and divide by 240. Work equipment, get hold of a selection of low-value fuses (1, 2 and 3 amps), and

occur with a piece of equipment drawing. say, a quarter of an amp, the fuse in its plug will blow first. All mains blocks rent draw for all the equipment connected

equipment, the initial surge may draw conditions. If you leave all your equipment instantaneous current draw could exceed 13 amos and blow fuses. Other damage is also possible when current surges occur. For safety sake, many people prefer to

CONTROL

This feature has only scratched the surface of setting up and running your own recording studio. Here on this page are some final pointers:

Subscribe to a decent music mag such as Sound
On Sound. This will keep you up-to-date with the
latest bits of kit, plus educate you on your current
equipment.
 If you're just starting out, get a good beginners'

book – MIDI Survival Guide from PC Publishing (01732 770893). The author? Vic Lennard (shameless plug!).

Lennard (shameless plug).

Don't be in too much of a rush to spend all your money – buy the essentials and learn how to get the most from them first. Also, allow at least ten per cent of your total budget for cables (MIDI), audio and mains), patchbays, disks, tapes, cleaning kits, footowitches, mis stands and so mis stands and so.

 Speak to people! Go to as many public music shows as possible to ask questions and test amything that interests you. Strike up a good relationship with your local music stores – make 'em feel guilty to rob you blind!

Above all, enjoy yourself – your music will be that much better if you're having a good time.

ENERAL MIDI

You may need to send your songs to other people purely as computer data. No problem: chances are your sequence can sive a song in the general form of a MIDI File. But how do you ensure that the person loading this song into their sequence: gets the same sounds as the ones you've been working with?

This is where General MIDI comes in. Any synth or sound module with the GM logo guarantees 24 simultaneous tones, 128 specific sounds, and drum notes mapped to certain keyboard notes.

mapped to certain keyboard notes.

If you need to transfer songs to other people, make sure you both have a sound module with a GM logo, or possibly Roland synths with the extended GS

patibility, look for the General

MIXIN' IT

What do the various knobs on a mixing desk do? Here's a quick rundown:

- Mic/Line: lets you toggle between a microphone (amplified) or standard level input.
 Gain: adjusts the channel's signal boost.
- Gain: adjusts the channer's signal boost.
 High: increases or reduces the top end (treble) of the sound spectrum.
- Mid: two controls. One increases or reduces the part of the sound spectrum selected withe second rotary.
 Low: increase or reduces the bottom end (bass) of the sound spectrum.
- Aux 1/2: feeds some of the signal to the Auxiliary outputs and on to effects units.
 Pan: adjusts the position of the channel's stereo picture from left to right, and feeds the
- signal to odd and even recorder tracks.

 Track buttons: select which of the eight tracks to record to.
- Fader: fine level control

ERFECT TIMING

How do you keep your sequence in time with your multi-treak? By using a SMPTE to MIT Time Code converter. This small boar lallow you to record a special code (SMPTE, pronouns 'simplere') onto one track of your recorder and then translates this into commands your ME sequence can understand - that's the MIDI Time Code the So when you star-forward yar recorder to a point part-way through a song, your sequencer will instantly move to the corn location.

While you lose a track on an analogue recorder, most digital multi-tracks have opti boxes that can output the MIDI Time Code without needing any special code on tape.

ARTH TO EARTH

A common problem is that of a low frequency hum coming from the loudspeakers – an earth loop. This is usually due to trouble with earthing in one or more pieces of equipment. A few tips:

 Don't remove the earth lead inside a mains plug! Break the loop by ensuring the audio system is earthed and by having a 270 other resistor wired in line with the screen in the offending item's jack plug.

Equipment can cause an earth lodp even when turned off as mains and audio connections are still being made. If there are problems with racked equipment, remove the mains plug for each item and start racking them again one at a time.

 A common situation is where mains adaptors are built into plugs. The electrical field can be picked up by other mains leads close by - so-called 'proximity hum'.
 Try not to run audio, mains and MIDI cables next to each

other. There are unlikely to be problems with good quality audio and MIDI cables, but mains leads can induce hum if the cable quality is poor. If you have to run such cables near to each other, make them cross at right angles.

Beware of computer monitors. Audio leads run nearby invariably pick up hum from the radiated electrical field.

he topics on the agenda this month are the techniques used to create FasyRaseAC's menus and gadgets. Gadtools, the library that as introduced with Release 2 specifically to smolfy the creation of Intuition-based user interfaces, plays a big part in these discussins and since the menu-related issues are easiest to understand this is where I'll start. Cadool menu definitions are based on sets of data blocks called NewMenu structures by for the C coder can be described like

NewYenu C

The nm_Type field is used to specify one of free entry types: a menu title, a menu item. or a dummy 'end of menu' value. Standard definitions, such as NM TITLE which indirates that an entry refers to a menu title, are available in the Amiga headers. The only other fields you need to know about are the on label and nm CommKey fields which are pointers to text strings containing a name and a keyboard shortcut for the item in sussion. All we need do to build a menu these days, then, is set up an array of NewMenu structures to represent the various menu titles and menu items we want... and let Gadtools do the rest. Take a look at listing I - the three arrays shown are all that are needed to define the complete EasyBaseAC menu system!

Of course, apart from the menu definitions we also need to get the menus displayed. A number of steps have to be performed here and I'll deal with them in the order they need to be carried out. Firstly, in

gadae

Overaa takes a look at how the EasyBaseAC menus and gadgets were created

order for Gadtools to be able to work its magic, information needs to be provided with details of the screen on which display items are going to appear. This is achieved by making a call to the Gadtool GetVisualInfo() function and on exit a corresponding FreeVisualInfo() function also has

CADTOOL GADGETS

As well as simplifying menu creation, Gadtools also provides a set of routines for managing a whole range of gadget types - button gadgets, used for OK/CANCEL type operations, string and integer gaditems and so on. The gadget type is identified by specifying one of the #defined types specified in the libraries/gadtools.h file. As with the Gadtool menu facilities. Gadtools gadgets are programmed at a significantly higher level than the Intuition library is able to provide. The function used to create a gadaet is called CreateGadget() and it uses a data block known as NewGadaet structure

WORD og_Width, og_Meight; /* siz UBTTE *ng_GodgetText; /* godget label */ J* feet for label */ /* gadget 10 */ /* gadget UserBata */

EasyBaseAC uses a number of Gadtool gadget types

including sets of text-based gadgets for displaying the individual fields associated with database records. The window3.c module, the view-only window code provided last month, used TEXT KIND andaets which are essentially view-only string gadgets. The module for the record creation and editing window (provided on the coverdisk this month) uses STRING KIND andgets because these allow a user to type text into them. A couple of Boolean on/off type BUTTON_KIND gadgets are also used to provide the Store/Clear boxes that appear in EasyBaseAC's editor window.

The basic code for creating a single gadget involves throwing suitable values for position, size etc., into the NewGadget structure and making a call to the CreateGadget() function. All gadgets created using CreateGadget() need to be freed by using the FreeGadaets() function but, because Gadtools gadgets are automatically linked together, only one call to this function is necessary no matter how many gadgets eventually get created!

only and the create/edit window may look the san but they are actually created using two different kinds of Gadtool gadgets!

Store Clear

∩ These Store/Clear gadgets used in the editor window are Gadtool BUTTON KIND gadgets

to be executed. Secondly a CreateMenus() routine must be performed. What this routine does is perform all the underlying Intuition-related menu structure setting up work. This call, too, must be coupled with a deallocating FreeMenus() function before a

program terminates.

The menu structures created by the abovementioned library calls still contain no size or position information. With Gadtools this information has to be provided in a separate steep involving a call to the

() This diagram shows the relationships between the various files which go to make up the EasyBaseAC program

Layouthenus() library function, and again this call needs to be checked for success (although there is no corresponding deallocation routine to be performed in this cash finally, the menu can be installed in the chosen window using the conventional Intuition function settlements/rip(). This function, incidentally, must be coupled with a CleanMenuStrip() call prior to the window

closing.

The unfortunate thing about what would otherwise be a fairly 'bearable' scenario is that we've got a whole load of library routines to

perform any call of which could conceived half in a more did occur we would have a half in a more did occur we would have been successful get their equivalent deallock tion routines executed. This, incidentally, it why you'll find all his menu creations of embedded safely with each window they you'll find all his menu creation arrange meris. — If anything goes wrong and a way we have been only a lower than the performance of th

GOING

If you have gadgets whose NewCadget definitions have significantly different attributes, then it is perfectly acceptable attributes, then it is perfectly acceptable attributes, then it is perfectly acceptable attributes of the perfect in the perfect acceptable at turns. Often, however, you may want to store, often, however, you may want to store, or the less that deplete whose padget structures defined only in say, then the perfect acceptable acce

CALCULATION

This loop approach is important with EasyBaseK for two reasons. Firstfi, when a user resizes the editing window I do a calculation to see how many text or string sadgest could be displayed, store this value as the database field count, and then quickly close and recepen the window to provide the new diplay. When a new database is loaded diplay. When a new database is loaded get entitle floor to spain used in the gadget cention loop, so the number of gad get entitle floor to the multi- ord page to that first appear is the same as those used when that particular those suced when that particular those suced when that particular the same as the same the

There are a few other things about Gadtool gadget creation that need to be mentioned. Firstly, Gadtools needs to store a number of private data items relating to the gadgets placed in a window, and it stores this 'context' indomation in a dummy gadget which actually forms the start of a Gadtools gadget list

Because of this, a call to a CreateContext() function needs to be made before any real Gadtool gadgets are created. Once the window is open it is also necessary to make a call to a GT, RefreshWindow() function which completes the rendering of the gadgets You'll be able to see how I do this from the gadget creation routines that are present in the EasyBaseAC window modules.

COVERDISK CODE

On the coverdisk thin month you'll find several files, One collect 8 like, it just the lange solution for the files graphic that appears in the main Exceptionsel's window. DISKSALV

Dave Haynie (Shareware)

The first thing that any Amiga owner should purchase is a hard drive – using Workbench from floppy disk soon becomes very irristaing. However, the only problem with a hard drive is when it goes wrong. And when they go wrong you'll curse yourself for not doing more to protect your precious data.

Fortunately, much of the best application software is Shareware and often appears on the Amigo Computing coverdisks. One such program is DiskSalv – an excellent program that not only repairs hard drive faults but can also recover previously deleted files.

DiskSalv comes with an extremely userfriendly interface that will even allow you to repair and salvage files from floppy disks. You can be sure that your hard drive will choke at some time, so make DiskSalv your top priority – be prepared.

(i DiskSalv is an excellent program for repairing damaged hard drives and un-deleting previously deleted files. It's shareware too!

ABACKUP

Denis Gounelle & Reza Elghazi (Shareware)

Protecting your hard drive is one thing but it is also sound advice to back it up to floppy disks once every six months. There are many good programs that will do this for you but certainly the best, and it's shareware, is ABackup.

ABackup allows you to store any part of your hard drive onto a set of floppy disks which you can, if you wish, restore back to your hard drive at a later date – also via ABackup.

Just like DiskSah; it comes complete with a very user-firedly interface which it selfexplanatory, even for the beginner. ABackup will calculate how many disks you will need for your backup and even compress the files, therefore reduce the amount of disks therefore reduce the amount of disks essential for hard drive users and if date gets essential for hard drive users and if date gets damaged you will also have a recent beckup

 Keeping a regular floppy backup of your hard drive is essential and ABackup does it all for you with easy and speed.

Shareware – shareware software can normally be purchased from PD libraries all for the price of a dail, and found on the Amiga Computing coverfusks. Shareware means that the author only requires you to pay a registron for feel you like and use the software. Shareware is the major backbase behind the Amiga's success and should be supported.

PD = Public Domain companies provide sharewore softwate for only the price of a disk plus a small covering charge to keep the company in business. This means you can purchate software for annual £3 – a bargain 1 shell you'll agree at much of the shareware software is better than its commercial counterports. In this, the last instalment, **Steve Whit** demonstrates essential software for you and your **Amiga**

DIRECTORY OPUS

GP Software (Commercial)

Unless you use your Amiga solely for games, which would be a waste, all Amiga owners eventually have to dabble with files directly, whether it's deleting, renaming, copying or moving them. The only means Workbench provides to do this is the Shell which although powerful is not very user-friendly—espocially for the beginner.

There are many good sharessure file managers but by far the best is a commercial product called Directory Opus by INOVARronics. Directory Opus has been around now for quite a while but it still retains the File manager crown hole. It is an excellent program that is completely configurable so as to provide the maximum power for your system, as well as an interface suitable for your own return.

ments. Directory Opus allows you to manipulate files every way as well as many other functions including views pictures, playing sounds and editing text. The latest version 5 but Directory Opus 4 is considered by users to be the bes

O Directory Opus 5 can act as a replacement for Workbench, although most users prefer Directory 0

VIRUS CHECKER

John Veldthuis (Shareware)

A virus is a specially written program that attaches itself to your hard drive or floppy disks and goes all out to destroy the data on them – usually accompanied by a message from the sad and lonely individual who wrote

The virus menace used to be fairly commonplace for Amiga owners but thanks to virus killers the spread has been severely reduced and new viruses are few and far between. However, it always pays to be cautious. Vina Checker, by John Veldthuis, is certainly the best and most up-to-date virus killer there is, and constant upgrade always ensure the virus threat is kept under control. Virus Checker is an unobtrusive program that simply se

in the background of Workbench and waits for disks to be inserted in your Amiga floppy drives. It then checks their and if it finds anything suspicious informs you of the problem and asks you if you want it to be eradicated.

It also has the ability to check a directory and its content

or certain viruses as well as kee a constant eye on particular fle that are vulnerable to certain viruses such as the Startup Sequence in the 5 directory.

() The virus menace is a serious one so keep your Amiga well-protected with Virus Checker by John Voldthuis

POWERPACKER PROFESSIONAL

Nico Francois (Commercial)

The floopy disk, and to some extent the hard drive, do have one major drawback and that is their capacity. A floory disk will fill very quickly and, due to the large programs that it can take, a hard drive will also do the same eventually. Apart from deleting programs which you may not want to do there is little else you can do. Or so it

PowerParker Professional is a program which effectively squashes programs so that they are smaller than originally but still run. Although the programs take about an extra two seconds to load (big deal), you can make a saving of almost 50 per cent. This means that a hard drive of 85Mb could be packed to hold 160Mb. An impressive saving you'll agree. If you want to squeeze the most out of your disks or hard drive. PowerPacker is an excellent choice

hard drive or floppy disks by compressing the files with RowerPacker professional

HOOLMANAGER

Stefan Becker (Shareware)

ToolManager is an excellent shareware program that allows you to access programs at the mere click of a button on your Workbench desktop. You tell it which programs you wish to access and then how you want that program presented to you - either as an image on the desktop or as an addition to the Tools menu on Workbench.

This means you don't have to go wading through windows and drawers in order to access a particular program. All you have to do is click the program's ToolManager icon or select it from the Tools menu - ToolManager will do the rest.

provides fast presenting graphically on the Workbench (see side of screen)

OCTAMED

Teijo Kinnunen (Commercial)

If you have a musical bent you'll find your Amiga finely suited to producing not only sound samples but also producing complete musical scores quickly and with ease.

The best music editor available for the Amiga is OctaMED, written by Teijo Kinnunen, which is now at version 6. It allows you to load in samples and add them to a notation or track editor in what are known as blocks which can then be bolted together in any order to provide a complete

OctaMED also comes complete with a sample editor which is almost as complete as a dedicated sampler package. You can even add special effects to your tunes and samples in order to spice them up a little. OctaMED also has a dedicated user group which pro vide free samples, tunes and information for members.

Also, Domark are said to be 'moved' after all the response and patience they have been given. So remember - next month!

GTI Charts - March 1996

The big German distribution company have sent us their latest charts from March 1996 so you can see what the best selling games have been over the last few months.

Top Ten Amiga Games

Top Ten Amiga CD-ROMs

Hey look, I'm Bonehead now

Vep, our competition is hotting up as our mall bog is filling up to the top once ogain with more bog is filling up to the top once ogain with more Actually, we won't feel you how many we got, but et we could do with a few more. As I mentioned last month, the ones we have received are absolutely brilliant and we will announce the witness soon. Keep them coming! Come on, all you have to do is jot down some lyrias - it's as easy as that, You don't have to perform lift you.

don't want to. Send your 'Song for the Amiga' to: Hey look, I could be Guigsy next month!, System, Amiga Computing, Media House, Adlington Park,

The hills are alive with the sound of.. er sorry, wrong film

Oh dear

Last month we informed you about how to download a free demo copy of Alien Breed 3D 2, but we printed the wrong Internet address. If you did try entering the address on your Web browser, you would not have got very for.

I will come clean. It happened because I didn't have access to the Web to find the original address and planned to change it a later date. Sorry.

Oh yes, that magic address is definitely http://www.team17.com/team17/T17/ab3d/a b3dii.html

Here is the proof that we do know the address. It was purely an accident and meant no harm to anyone, OK?

As you can see the charts are quite surprising. Sensible World of Socer third best Gloom and Star Crusader? Also, Pinball makes quite an appearance with the excellent Slamtill and Obsession. And to lop off the charts, at 10th place is a game w've never heard of, so there you go.

The CD charts are quite predictable with Aminet occupying four spots in the entire top and including the top spot with the lost annual release. There is only one actual game CD which appears and find? Comers Delight I which was for better than the sequel. The last spot is taken by the fits Schwartz picture and animation CD which is, of course, excellent value for money.

The Internet is great

Although you may have read elsewhere in the issue that we have a Web site containing its enterties the news. ACAS, ESP and other features contained in the mag, 4d you know that system can be accessed too. Yep, you will find the latest news and possibly a review or too as well as a second which we are working on at the processor.

Let us know if you have any views or ideas you could put forward to make it special. Write to us at the usual address marking your letter "System News."

Next month

ing at what could be coming next month. If doesn't mafter though does I?? Well, I?! the first time work ever done at System next month bits or it's quite excepting, su'n't if Hoppeluly we'll have a full review of Championship Monager 2, XIR Datio Disk legends, and we will also have previews of Altophy and... welly out! have to wall and see because we promise if II be another packed issue full of the latest news reviews and previews as usual.

pretty much given up hope. We thought 21st Century might, at this point, just give up on us all. Fortunately though, they must still have faith in the Amiga platform, and good on them too. Signing Dezign, a new title was soon on the horizon. It review. "Too good to be true?" we thought. Well,

Amiga gamesplayers collection. You get four tables to try your hand at, and each is themed First up is Mean Machines, a motor racing table,

team, look certain to make their mark with this title

Wight of Demons: This is the horror themed table and you will need to astend yourself against the evil Zombies. To kill a Zombie and earn an extra 5,000,000 points, shoot any ramp showing a Ilashing yellow lamp. If in Bat Butcher Mode you will have to shoot the flying bat from the sky with your

e or space; autr-rays, specially appear and rays and the name of the game ou will and kill the Alterod Whit pour amethower in a Spall multi-all mode, and the special multi-all mode, and the special multi-all mode, where you can destroy the special multi-all multi-all where you can the special multi-all where you can the special multi-all where you can the special multi-all where you can had all multi-all where you can had all multi-all where you can hold any ramp to explode a sheet and collect a jacksol.

mean machines. In the road as you pit your wits against Monster Car Mode where you can use your Monster car to crush the smaller cars, or Formula 1 Race Mode where you use the flipper keys to steer you car around the track shown on

Pirates: shoot the Mermald Ball-Trap to get the Mermald bonus. This starts at 1,000,000 points but can be raised through the Magnatable. This is a magnetic playfield where there are magnets placed under the red lamps - these can be controlled with the flippers. You will also have to control a mutiny and a raging storm, various multi-ball

In Pirates you will need to defend yourself from sharks and can dive for sunken treasure

the next is Pirates, with, (surprise) pirates, piranhas and multiny. Ace of Space has a uturistic theme where space ships, asteroids and allens provide the setting, and lastly, Night of Demons is a table habitled by a naked (bar a strategically placed serpent) vampliress. Being a pinballer there's not

Tracks and ramps have been well designed for players of all skills

a great deal to explain about the gameplay – you simply use the keys to flip the flippers and send the ball shooting around the table. There are plenty of missions to get to grips with and each table has a variety of modes to keep things differ-

Video modes

The Video Modes are played in the scorepanel and add some variety to the name. Here are some that are available:

No Brain No Pain - you must try and keep track of where the brain is going while the skulls are rotated. When they stop you have to pick the skull that the brain is in.

Death Planet – fly your ship through the inner tunnels of the planet to get to the centre. It's harder than it sounds because you have to guide your ship through the narrow tunnels with the flipper keys.

Knife Throwing - throw knives at your enemies and try to avoid being taken out by cannon fire. The flipper keys allow you to move left and right whilst the return key will throw a knife.

Formula 1 Race – there are six windy tracks that you have to steer your car around with the flipper keys. Don't bump your car too much though as you will lose energy.

review

Graphically, the tables are well drawn and detailed enough to look good but not so much as to interfere with the gameplay

Ace of Space offers a video mode which has you pitting your skills against death-defying tunnels in your space ship

ent. What makes this rather different from the rest, though, is the LBD score panel of the top of the screen. Rother from just showing simply the score, you do go of various video modes which provide different accode challenges. On Mean provide and the score of the whith the flipper keys. These extra challenges work with the flipper keys. These extra challenges work exceptionally well (eithough they definitely don't have enough gampelox to stand up in their own right) and keep things interesting.

As far as the main gameplay goes, the movement of both the boill and the flippers feels realistic and the tables vary from being quite simple with only a few tracks to windy, complex efforts where you'll need to keep your eyes peeled. The

Night of the Demons looks quite simple in layout but the various missions keep it taxing

The scorepanel at the top provides animations add atmosphere such as giving the impression you are flying through the galaxy

sound effects also work well in enhancing the readim. Graphically, the tables are well draw and detailed enough to look good but not simuch as to interfere with the gampelpay, Night Demons, for example, may suit a beginner better as the table is quite plain with only of the various at the table is quite plain with only of the various of the control of the control

There are some other nice little extras such a Lanssover Feature which is a metal fence the side/ane which forces the ball back into joi instead of allowing if to be lost down the side lane. Another is the Magnitable which is a may nefic playlifed where you control the magnet with the flipper keys to get the ball locke between them which results in various awards.

Final word

Samtili is without a doubt an excellent fills. Of the one level this is an accurate simulation of the real thing (as much as if can be in 20 any way) and an another, the accode element makes for something different to keep if value Graphics are colourful and defailed with we designed fracts and ramps to keep each table individual. The carbon style in the scorepare adds novelly froe.

The sound frocks work well encog (offlowdp) some ore orther cichéd such as in rock tune), and they accompany each take conceitable. Whether it is up to the sam conceitable. Whether it is up to the sam probabilitations is really poing to be down individual preference. It su to the some as the term to the some as whether ver but yet in ord observation as whether whether ver but yet in ord observation as whether and if Ituald Design keep this up then it is contributed to the some order of formy loosite like this new team hove to big future cheed of them. Let's hope their futer poors include the Ampia.

DISTANT SUNS 5.01 DESKTOP PLANETARIUM CD-ROM

Your Spaceship Awaits!

- 1500 16 color & 256 color IFF images
- Megabytes of 16 color & 256 color anims
- · 3-D planet rendering
- View images in 256 colors on AGA capable Amigas
- Display night sky from 4713 BC to 10,000 AD
- Add your own comet and asteroid data
 Comet Hyakutake and Hale-Bopp data included.

AmigaDOS 2.04 or newer, 2 megs RAM & hard disk required. NTSC and PAL versions available. List Price \$99.95 – Special – mention this ad – \$79.95 Call for upgrade prices

GeoMorph 1.00

Create animations where the landsape, trees, clouds, and colors change before your eyes. Morph landscapes! Grow trees! Change seasons! Create moving clouds! Multiple morphs in single script!

Requires VistaPro 3.0 or newer. AmigaDOS 2.04 or newer, 2 megs RAM & hard disk required. List Price \$69.95 – Special – mention this ad – \$39.95

SIGH-Light 5.4

Forget to spring forward or fall back? Let SIGH-Light do it for you! Can be set for America, UK or Europe. Adjusts your Amiga clock for Standard or Daylight Savings Time.

Requires an Amiga Computer with a working clock. List Price \$29.95 – Special – mention this ad – \$19.95

VistaLite 3.0

Want to make beautiful landscapes like VistaPro but don't have the memory? Try VistaLite! Bender fly-by animations of your favorite places. Supports 256 color and HAM-8 AGA modes. Contains Altitude Texture, Clouds, 3-D trees. Reads MakePath scripts and builds VANIM animations. VANIM viewer included.

Requires 2 megs of RAM and Workbench 2.04 or newer. Reduced List Price \$24.95! Special with this ad - \$14.95!

This month Frank Nord presents three handy hints and tips for Workbench users

Bits and bobs

inuses are scary things made scarier by the media now that they seem to have latched acts the silicon version of AIDS as news worthy capy. But as an Amiga owner you an rest easy about most of the viruses you read about in the paper - they'll only affect PC owners. there are a lot of myths about viruses, probably saread by their creators, that lead to people being necessarily worried about their software collection fou don't have to warry about catching a virus from a disk formatted under anything other than AmigaDOS, so don't warry about putting PC disks into your drive. fau don't have to worry about a virus contaminating your Amiga's clock or Kickstart ROM. it won't hapnen you don't even need to worry about a virus invading your machine via modem, although if you download software and the archive has a virus, you will have a problem

There are certain measures you can take to ensure that your exposure to vince its minint. The first is to make sure you know the source of each and every looply did you see on your modeline, ond, if you are solely a games player, make sure you turn off your modules for door or multie between different games. You should also always keep disks write-protected wherever possible. There's not much point write grow teeling your hard drive, of course, but then you'll probably be not the mast stage of protection.

The neet stage is to note are you have some sort of virtue scheer runing. Although new virtues for the Amiga seem to have traded if somewhalf (is this read feet of an admitted to the seem white virtues for it?), there are still pleaty of 19 programs dedicated to enductioning the ones that do soid. ACS firm forouthe is still Virtue Checker, even thought the envewer versions of it even on the blooded in size, but it doesn't really matter which one you choose, they all of the plot admittable.

DRAGON WHO?

Nat Dragon who, drag in farge, This feature of the Analges' OS is much undersured by Analge owners, seen though it has been towed as the next best thing by Microsoft and the seen of the drag of a drag capabilities for a loss time now and quite a lot of programmers have included things called AppWindows, AppMenus and AppLons in their programs. But what are they?

Well, Appriedows are windows in a program that you can drug front to lead than a perform opportunism on them. Exemples of this would include ToolsDomon 2.1 and Swestinio. Try drugging icous into the windows of either of these two grams or many others and see when thappens. Apphehen up at a new menu iron on your tools menu that allows you to access the program that created it easily, see adult if you have a for of screens open, and Appleans are onle there to meet excess to programs that use enother screen easier. Try denging a pitture file enth OP lain's Applican and see which happens. Hence a worst if no only program is not well the program that use enother screen easier. Try denging a pitture file enth OP lain's not the seed of the program is not to the contribution of the program is not only the contribution.

HDTOOLBOX

Here you got a third-party SCSI/IDI controlled?

by you have Commender's HTD-Globe program

siting on your machine doing nathing, because
your hard drive software came with a configuretion tool? Well, if your controller supports the
BB standard, as most of these days, then you
can use HTD-Globux to prep and partition your
mad drive and have the added security of the
knowledge that you can follow the instructions
and drive and how the dadded security of
the showledge, the the formatting of hard
disk drives.

All you need do to get the program working
All you need do to get the program working

disk drives.

All you need do to get the program working is examine HDToolbox's tooltypes. You will see a tooltype called 'SCSI_DEVICE_NAME'. You can thange this to match the SCSI device used by

your controller. For example, the SSSI device for an Oktagon is called 'oktagon,device', while that for a GVP hard drive controller is known as 'gyassis.device'. Activate the tooltype by removing the brackets around it and add your device name, making sure you use the same case. Now, when you use holloolbox, it will look for the

Further, if you have a CD-ROM drive that causes you problems when you bool (the Amiga looks for something to boot from the CD and it takes ages), then you can do this. Make your CD-ROM drive's SCSI ID 6, if at all possible - some A3000 owners wan't be able to take advantage of this tip - and load to take advantage of this

Okay, now exit HDToolbox and open its information window. Check the tooltype that says 'SCSI_MAX_ADDRESS' and remove any brackets, if necessary. Now change the unit number it says as the max address to 5. This will stop MTDoblax from senior yu CDsDM dray.

In work matter to the CR-ROM or your SCS controller, they'll still be able to see it, but i young p, into HDT collox, now you'll see that the young p, into HDT collox, now you'll see that the drive with the highest unit number now, has changed mark on it. Save the changes to the drive soll that's hoppened it hat the flag the marks the last unit in the SCS I chain has been updatedly and now when you reboo you should have no trouble with that pesk; CR-ROM drive.

Paul Overaa looks at the official Amiga include files and outlines the benefits they offer

Native process

o a large extent, coming to terms with 680x0 coding on the Amiga simply means coming to terms with the purpose and use of the routines present in the Amiga's system libraries. Exer, DOS, instition, gadbools and so on all provide the programmer with massive collections of functions that simplify a great many coding tasks.

To ease the burden on programmers of Commoders, owe Maniga Technologies, from close or colonidate or water of system files containing thousand the COLOnd definition, more, system structure plotses and so farth. The existence of these files help programmers to create their own definitions is paid which is clearly both time consuming and which is clearly both time consuming and promote and secondly, it promotes standardication of life mod/ Amaig programmers soon get the babel of using the reody mode definitions provided in the rickolds:

RECOGNISABLE

There are, in fact, two versions of the system lists. Corporations we use of Photoel Bind" containing, as expected, Catyle system definitions and these lists can be easily recognised, not only by their contents but by the fact they all have "All fillenmen exertions. Assembler programmers have exertised as exertised as well-be programmers have estimated by the fact they all have "All fillenmen exertised." Subsender programmers have estimated and exertised as exertised as exertised as exertised as exertised. The exertised in the exertised of the exertised as e

The Antiga system files then provide the C and assembly language programmer with broadly point-del universes. A C programmer might, for instance, use definitions taken from the devices/serial, it heads of the control of the control

All commercial assembler packages, such as Depopo, come with a set of the assembly longuage versions of the include files. Public domain assemblers, such as Charlie Glabb's ASBA, do not and in this latter case, the files have to be purchased separately. These one, in fact, some significant dates are largest to buying the supports official files anyway because you not only get the includes themselves the fundamental conductors - tent files which explain

SERIOUS

COMPATIBILITY ISSUES

The latest system files available are for version 39.1 of the Amiga's operating system and these, like all previous releases, are 'backwards' compatible. This means, for example, that a Workbeach. 13-based programmer can use the up-to-date system files providing they stick to using only those library routines which were, in fact, available with the 13 operating system release.

Another point worth mentioning is that programmers who already have an earner set of included files only really need to update their files if they now have a more up-to-date, or upgraded, Amiga. Many programmers, for example, originally purchased the Inow dated) Workbanch 1.3 header/include file set but have quits ensibly continued to use them simply because they are still using 1.3-based machinest.

with the official includes

how each and every Amiga library function is used.

On top of this you close get notes about the latest O/S changes, examples and storaids on all-important new facilities, plus a substantial toolkil of programs that have been found useful to Amiga developers. Enforcer, for example, is a utility that, whilst running as a background task, can catch and report illegal memory occess errors in your programs. If you include debugging information in a

grams. If you include debugging information

Then you are going to need the official includes for a give them their proper name the Native Developer Update Disks). No matter what assembler you are using, you are, at the very least, going to need the extra documentation provided. Without this documentation you simply won't know what may library facilities are on offer, nor how those

The Native Developer Update disks are then, or at least should be, an essential part of every Amiga coder's programming arsenal!

coder's programming arsenal!

The Amiga Native Developer Update Files are available from Amiga Technologies (01279 680617)

A particularly important point to bear in mind as to as the documentation provided with free Hills is a concerned in that it is study up to date. These concerned is that it is study up to date. There are no printed equivalents where this is so and in foot the only authoritoritive printed details of Amiga library function use, those in the Addison Wesley teludies & Autodaca ROM Kernell Reference Manual (EKML), are now very out of date. Even the latest [Jarl] addison only covers Refease 2 of the Amiga's operating system.

your code there's a utility colled FindHit that will try to locate the source line that caused an Enforcer

error. There is a SegTracker utility that keeps track

of the Seglists created as programs are scatter

loaded, tools called Mungwall and MungList that

can watch for illegal FreeMem()calls and list the

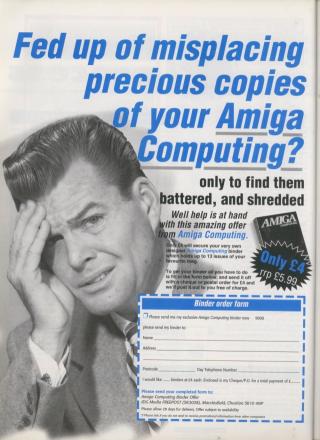

awners of memory blocks in use. Dozens of other

programs are thrown in as well. You also get the

Amiga FD (function description) files and utilities

that can generate LVO (library vector offsets) values

and so on.

This month Paul Overag offers a beginner's eye view of how ARexx performs its magic

Get the messc

while ago someone wrote to me asking how ARexx allows programs to communicate with each other. You know, how ARexx makes sure that the right messages end up being sent to the right programs and so on. Since this is a topic which might be of interest to quite a few AResce users. I thought I'd devote this month's instalment to explaining the general principles behind the ARexx messaging system.

The first point worth making may come as a bit of a shock - you see Altexx doesn't actually do that much of the communications work itself. Instead it makes use of provides, and it is here that the story really starts.

Exec is the Amiga's multi-tasking executive. In other words it is the part of the Amiga's operating system generalised routines present in the Exec library

One of Exec's support arrangements is a message system based on the use of a system structure known as a message port and any program which needs to communicate with another has therefore, as a first step, to sage a program will allocate a block of memory. fill it with the data which forms the message, and then send it to the message port belonging to the destination

Once a message has been collected, i.e. unlinked from the receiving program's message port and used, it gets 'replied' to. This is a job which involves the program which received the message linking that same message into the message port of the program that originally sent the message. The only difference on this return journey is that the message will be given a finished with' marker - this tells the sender that the message has been dealt with and, therefore, that the black of memory being used for the message is free for re-use.

NOTHING MOVES

the data that forms the message stays exactly where it is in memory. What happens is that the block of memory representing the 'message' has various address fields present which get adjusted so that the message gets 'logically attached' to the message port it is destined for.

The good thing about this arrangement is that there is never any need to copy the message information. Programs that receive a message read the contents of the very makes the arrangement extremely fast.

Another important point about Exec-style messages is that the Exec arrangements only specify the layout of the initial part of the message (list pointer areas and so on). Exec ignores the rest of the message contents so programs are free to add on to the basic Exec message structure any data they want.

All ABove messages gel logically linked into lists essage porti

AREXX CONNECTION Now FOR THE does ARexx know where the messages should

messages, Similarly, ARexx messages, as you

tions facilities are concerned then, is primarily to act as a sort of control centre. Programs

ARexx checks for and, all being well, locates these ports by looking at a 'public ports' list

which Exec maintains, Because of this any port name added to this list (this is something which is taken care of automatically by any program which contains an ARexx interface), Luckily, all

magic gets handled automatically. As far as things ARexx users need to remember. Firstly, at the time you try to communicate with it. In it via ARexx.

that the functions used to search the Exec public never gets found and ARexx issues an error

Net benefits

hen the mass media talk about the Internet what they mean is, of course, the World Wide Web. With its styliah frostend it certainly looks the part, and indeed the impression that many odvertiers give is that the WWW is the beall and end all of the Net.

Admittedly, if appearances counted for everything, this might be the case. But there are pleaty of other considerations - interactivity being a prime one. Surfing the Web is often a lonely pastime, Yes, you could participate in a heated discussion on a Web Chat site, but it's a slow affair. If you really wont to have a conversation over the Net, by far the best option is to by IRC, or therent Relacy Chat.

On on IEC channel II is possible to exchange opinions and advice in a matter of seconds, not only with the people on the channel as a group, but also by angaging in private conversations with one other person of a time. You can also transfer list directly time one user to contieve, and many channel also support extra commands which are granted to certain users individually.

There are geliptre of Amigras people ic both channels,

although my personal favourite is easily #Amigacafe. Even an IRC newbie is welcomed

Need a way to make money? Stationery packs are an easy money spinner, as Frank Nord explains

Completely stationery

tationery packs are an everyday necessity for companies and individuals who write a lot of letters, and can be made easily and cheapily on the equipment you have at home. Let's start with personalised stationery and move onto the more serious business of creating corporate stationery.

compared authority.

Compared authority con in mind if you can going a state of the sea of the sea

Set us priet sample bodder with a clair amount and definition used on a fleetherdorffice, just to posple con see exactly how their letterhead will look post one of bear in mid-fleet for lifet plain copies bond intri testily good except to charge money for letter based, it delimely persy to look for non paper to of paper and tooks wery professional flexibility and the paper and they offer papers at up to 13 Signs, for that not low very professional flexibility and the papers at up to 13 Signs, for that not low very look papers at up to 13 Signs, for that not low very love flexibility and the set of the set of

letterheads, at an additional cost of |

Final presentation will also help you sell your product and a nice bit of ribban to tie the paper together is a good touch, as would be a how to keen the namer in Now, before you all rush to your local printers to get A4 boxes, stop for a good bit to you. If you are going to make up a box of 48 sheets of writing paper, you will only use 12 sheets of A4 those sheets. Why? Because nobody writes letters on A4, and Basildon Band certainly isn't available at that size. No. people write on A5 paper, a quarter the size of A4, saving you heaps of cash for paper and your printer's toner cartridge or ink refills

So the answer to your box size question is to get a box that is capable of holding 48 sheets of A.5 paper, envelopes and the ribbon to lie them with. One individual I know of actually went to his local printer and gat a set of 50 of these boxes.

made up with a nice marbled finished and lined interior for about £30. Not too much to ask for, and it will have a great impression when given to the punter.

Although this enterprise can be seen as a license to print money, you'll need to know what to charge people. I have seen personalised stationery packs advertised for as much as

£30, but I think these were probably prised on gold lead or something to warrant this high a price tog. I think a price set somewhere between £10 and £20 is reasonable and makes good gift defe for releading. By ow were to charge £10 for the pack of 48 theets, you could probably expect to make somewhere between £6 and £8 in profit, provided you aren't required.

somewhere between CS and CB in profit, provided you creen't required to post the pack anywhere. This would break down to about 50 for the box and say 20p for the ribbon. SI for the evelopes and 50p for the paper, plus cost for printing the somewhere the control of the control

Phil South begins a series about how to plan and execute an Amos program project

Back To Basics

his is a subject I come back to time after time, and is it may worder, the amount of mail and enall I get asking me how to write Amos programs. I'm not running a correspondence course, in case you were wordering, but of times if feels a like it. I thought I've stime to visit Amos dreish, and show how you would plot any organic most satto in finish, and how you would ensure that not only does the program perform well but do it seay and attackine to use.

Before you even that Amous you of the sold his time and again, you should have a plan C to find it into and again, you should have a plan C to find it into and pagin, you might get your ideas food and, or a routine which you've evoked which does some finding cool. But is does not be developed into a lifty functioning program by hocking every of the program allow of being for you remember you will not always and the program will do fair, what or der fings all what the program will do fair, what or der fings all more on those the program will do fair, what or der fings all the fine you do how the program will do fair, and care tree.

ing of ony software, and the user should know just by boding all your screen what he has to do and which batton his should gress to get the effect his to do not which batton his should gress to get the effect his house of the effect of the

program does and how it does it, but high on your list should be 'how does the user see the buttons and menus, and is it obvious what must be done at every stage?' If you ask yourself this question at every stage of development then you will end up with a program which looks and feels right.

In planning how the program works, you would

do best to work in a kind of pseudo-code, a list of instructions which describe in words of English

part

To operate this program, click one of the buttons below to choose an option.

Thank you...

Coming

About Us

must these days

Ideas Software

rather than Amos, what the program must do and in what order. For example, if you want to write an arcade game the pseudo-code might look like this:

initialise variables set up the screen Load the backgrounds set initial positions for sprites statt main program Loop check for joystick moves and butto hits

check collision detection
if there is a collision
then activate bit subroutine
if not continue

collision subroutine explode sprite by replacing with explosion graphic

You can begin to see the program emerging

SUMMARY

So when you are embarking on a new project, start with a gen and paper rather than hacking about with a gen and appear rather than hacking about with a gen and see that the second part of the project acts small routines to cope with sock part of the program, but don't artempt to fit them together until you have a clear idea when it's all going to look like and how it's going to work. Keep a notebook of and how it's going to work. Keep an other clear with the servers adout purpose of keeping and ideas in his servers a doul purpose of keeping and all your ideas in one place where you can refer to

em as well as giving you somewhere to jot down nything which occurs to you while you're on the is or at work far away from your Amiga. Next month we'll aet this process rolling by start-

ing to create a multimedia program which will combine graphics and text and sound to show off a range of products, forming a demo which you could upload to the Internet as an electronic brochure. See you then. already, can't you, and if you know anything about Amos the commands to make this program work suggest themselves immediately.

The sugges you should go through are theseideas, pseudo-code, interface, coding, lesting, revision, compiling. Don't bother compiling a program until you'r sau it's totally builder proof. Equally, don't do any coding liyou know what order the routines should be in or before you've got you'r infertoe drawn out on paper and created the graphics in a point program. These hove a bearing on which you will code and how you will

WRITE STUFF

If you have any other Amos programs or queries about Amos, then please writes the usual address, which is Phi Modified March 2, Allington "Rolling Modified March 2, Allington March 2, Allingto

Steve White explains how you can add bone and muscle and the dynamics of movement

Muscle bound

aut month I demonstrated how to drow the humon form easily and quickly using only a few simple rules. This month my aim is to explain briefly the suchiniques that can be employed to add realism to a lifetom, whether it be human or animal. This involves adding anatomical references such as bone, muscle and flesh in order to create a sense of realism and dynamics to a

Drawing a button head or body is fairly simple provided you stick to the rules, but fleshing out a form with bone and muscle requires some knowledge of anatomy. Fortnately, that means you only have to understand bones and muscle, and not the internal organs, and only those that effect the skin on the body.

The first fiting to do when learning anatomy is to locate the points on the body where bone and muscle is promiternt. However, it is also a good idea to get as many references to a particular point in a variety of different positions as bone and muscle changes as the body is moved.

As an example, take a look at your forearm.

Apart from the elbow and wrist their are no real visible muscles or bones. But clench your fist and mouth light up and cast shadows muscles push up the skin along the side of the foreorn. In this example we would use the muscles to demonstrate a purch or thrust. Allowly over hore recognised a particular anotherical feature associaded with a particular dynamic or position. Learning does not be supported to the property of the position of the state of the state of the position of the state of the state of the position of the state of the state of the position of the state of the position of the state of the position of positi

nan face the prominent feature:

such as the cheekbone, nose and

is of the tone
to modes to
the modes to

requires extensive study and, if you are animating them, an understanding of the dynamics of

ANIMATED FORMS

I you are planning to create an animanon hat will include lifeoris (I hat teh term), you will not only have to learn about the basics of anotomy but olso understand the movement and flexibility of a body. By understanding the way the muscles and bones change as the body moves you can make your animation much more dynamic and add weight, age and sex to your subject matter.

The best way to understand movement of a

The best way to understand movement of a form is a study in and make noise. Obviously, you're keen to get into the nitry gritty of subject matter (first and you'll reap the subject matter (first and you'll reap the rewards. Take a look at the muscle that runs you turn your head to the side this muscle is muscle with the properties of the properties of muscle you have been a subject to the some forward looking position. These are the types of muscle you should gay close arefinion to as

If you take a look at the leg example in it screenhot you will see that the toes are poi ted. Because of this the calf muscle become more prominent and because of the rigidity. The knee, so too does the thigh muscle and it muscles around the knee itself. This leg we just part of a logo but it had to look real, are

111

Here you can see the leg with the thigh and calf muscles tensed. The knee is also more visible as a result of tensing

adding muscle and bone to convey an overall dynamic was imperative. If the muscle and bone had been incorrectly added the leg would have lost its identity and the complete image

Obviously, another very important feature of bone and muscle which should not be ignored is shadow. Understanding the shape of bone and muscle is essential if shadow is to be rendered accurately. However, cast shadow invariably falls on other bones and muscles, so the process has a cause and errect nature. Lake thigh for example. When the thigh muscle it tensed it causes a shadow to be cast on the inside of the leg. However, due to the ova shape of the leg the cast shadow is also pulled around and curved as a result. This can be clearly seen on the thigh muscle and the inside of the thigh.

Understanding non-human anatomy is ever more difficult. Once again it all boils down to study and taking notes. There are some very good books written by artists who have already done the hard work, so you can save yourself a lot of bother and time-consuming work by nurrhaping such a book.

I have found wildlife videos to be one of the best reference aids when drawing non-human lifeforms. They invariably capture animals in their most characteristic poses and if you can recreate this in your Amiga paint package you're guaranteed success.

ies produces the better work. Try not to be pt off by the complexities of anatomy. Only stud what you feel is necessary and remember your best reference is yourself. Don't feel stup standing in front of a mirror and making note — if it helps to improve your design skills it can

Paul Overaa takes a look at a lesser known application of the Midi sequencer...

Seeing the light

One light control box that is quite popular is called the URS Show It is intellep minority of terminor and provides eight 300 wort outputs which can be programmably nichted and suring Mid-Channel IG. The URS Show reporch using Mid-Channel IG. The URS Show reports have been change commands and active seeings program change commands and active seeings program change commands and active seeings program change in the control has been seen in the control of the control of

Prome Music's MP020 light controlled

and 15 dynamically changing 'super scene

A slightly more sophisticated unit is the Profile MP820. This provides eight channels with a power rating of over 1000 watts per channel and

both the Alfdi channell, and the range of notes to which the which the suit respond, the user selectable. The MPSCO again uses a note/webctybbased light common the channel of the channel

potentially over 2 megawatts of lighting controll). Profile also offer a light unit from Ryger Electronics called the MIZ which, again, is Midi controlled and provides additional 'intelligence' functions. The same company also market Midi/DMX controllers and there are even some Midi controlled lanes products under development.

Aidi Line Drivers

For some lighting applications it may be necessary to use long Midi coller una and for quite of two years now it has been possible to overcome the 15 mere Midi signal colle length intin, in four of two mere Midi signal collections and the collection of the Midi Midi line Driver system which not only overcome the 13 million that let Midi signals be sent down cabbies of up to a kilometre in length. The arriginal MID yearm was uniferstantly to the region of the collection of the

They're called MTR Midi Line Transmitter Receiver boxes and consist of a pair of units with the cable link between each unit being made either with screened twisted pair cables or, as is more common in professional applications, by incorporating the devices into paths that end up being sent down multicore cable.

With the MTR system only one unit is mainspowered. This 'master transceiver' has power, Midi In, Midi Out and line connectors, plus an indicator. LED to let you know that the unit is poweredup. The second, remote, slave transceiver derives its power from the line itself, so has only the Midi In, Midi Out and line connectors. With these units, because the MIR can work down multitore, you'll often find these units installed in theaters to control lighting and trigger stage effects. There are, of course, plenty of other situations where the ability to get Mid date down long cobler runs is equally important. In recording studies, particularly with remotely located control rooms, an MIR system can be part of the permanent installation.

As well as the well known Midl gedger memofacturer like 1 - Cooper, Mid Solvinar, Philip Reas and as on, quive a few psecialised companies. Reas and as on, quive a few psecialised companies customised Midl control units for prefessional users. Such companies can add things like wirestates based and fire optic-based Mid links to a cost of these types of esoteric options tends to put them out of reach of the average Midl user. The four remains, though, that where basit fighting for the control of the control of the control for the control of the control of the control for the control of the control of the control for the control of the control of the control of the four memory of the control of the provision as extensive, and the control of the

Got a digitiser that's collectina dust? Gary Whiteley has a few

sugaestions

f you're one of those people who bought themselves a video digitiser but gave up because you fovourite video or TV programme, go and dig it out. Find the connecting leads and get it plugged into your Amiga because I'm going to run a few animation ideas past you which might just grab your impaination.

You'll also need access to a video camera (a camcorder will do finel and a tripad or copy stand/rostrum with a suitable camera mount, a couple of Anglepoise or similar lights, and a quiet dark corner where you can remain undisturbed for days on end. with a table or other solid surface to support your and shooting location.

DECISIONS

Now comes the difficult decision of what to animate Well, you're hardly stuck for choice! Almost anything that you can fit in front of a camera can be animated be unable to keep still for any length of time, no matter how much you plead with them. Instead, think about all the possibilities offered by drawing or point. ing a series of different images on paper for even animation cel if you can (a) afford it and (b) you have a suitable rostrum with peg-bar to keep the cels 'registered" - i.e. fixed in the same place from frame to frame). But why limit yourself to two-dimensional work on paper or cel? Look around you and see what

other possibilities present themselves. A good place to start is in the kitchen where food items such as grains, nuts, beans and pasta shapes can be used to construct pictures. Then consider toys, models, things made from wire and plasticine, cutouts from mago zines, and other objects which you can build yourself. Some of these things will make for 2D anima them. Just let your imagination run wild for a change

rostrum-mounts a tripod. The oice is your

grapes could soon turn into currents

- but avoid using objects which will quickly lose their shape, such as fresh plants and fruits, or melt or otherwise be affected by the hot lights shining on them.

CONTACT POINT

Gary Whiteley can be e-mailed as draaz@cix.compulink.co.uk

DECEPTIVELY SIMPLE

Animation is simply a sequence of still images frames per minute for video and 1440 frames for film. Either way, they're both frighteningly large numbers of frames to contemplate, especially if you're thinking of making a ten

But hang on! Most animators shoot every halved. Sometimes you can get away with onds of the same frame if the story calls for it so don't be scared off at the prospect of hard

To make animation with your digitiser you'll

have neither of these, you should still be able number of frames which your Amiga can play

Start with a little planning - decide what you want to achieve and work towards it. Set up your little animation studio, switch everything Set up the first frame (image) of your animation and make a test grab with your digitiser. Check the lighting, colour, and how the image is framed within the screen

When you're happy that all is how you wish won't be so great unless you have a 24-bit digitiser, plenty of memory and a hard disk it's time to start animating, so open a new file

and take a new grab of the first image. You only need to take one frame (not two) as your

second frame, make more adjustments, take the third grab, and so on.

Paul Austin continues his tutorial on the do's and don'ts of basic space craft

Paper to

ther a fair amount of head scratching, sketch ing and second thoughts regarding design and construction, I decided to oot for the simplest possible starting point, and see how

As you've probably gathered, the starting point was a basic faceted cube, the idea hains to deman strate how quick and efficient building a respectable bit of cannon fodder can be. Needless to say, the ship is meant to be a bad guy, and as a result it plagiarises most of the classic traits you'd associate with a bad guy. Down swept wing fronts, aggressive raked wing design and, most important of all, a general look

and feel of something unpleasant from the real-world. The beastie in question is a bat, but of course you've already spotted that hadn't you? Anyway. here's a step by step guide of transforming a bax into

Although there seems very little correlation between the first and the last model, there's been little added or taken away. The only major changes consist of moving and merging a few points to create softer corners here and there, the odd move, scale and taper on selected point and polygons, plus one or two additio-Figure one and two are simply progressions, with a few point merges as mentioned above. Figure three is obviously where most of the action takes place.

However, after establishing a basic form I was happy with, and before progressing from two to three. I decided to save myself a lot of extra work by deleting half the model. Now I know that may sound like a very silly thing to do, but once you've decided on a direction for any symmetrical model, there's very little point in plodding on and being forced to measure or eyeball everything when the mirror command will do

By deleting half the model along the Z axis you're instantly giving yourself a lot more freedom to

BUILD RASICS

I must stress that the point of the exercise isn't to simply replicate the model I'm

You should start out with a faceted cube to keep things simple, but go for your own look and feel. All the basic principles should remain the same, and although the shape may differ, the basics of adding detail and texturing the finished model will work just as well on any model your imagination can come up with.

experiment with the finer design points. Needless to say, once you're happy with the shape a simple mirror points along the z axis completes the basic construction stage. At this point you can simply select the detail areas and add the finishing touches, a prime example being the well area in the centre of the ship, which next month will hold some of the all-important fine

As you've probably guessed, one of the prerequisites in the design spec is a low polygon count. However, if you're planning to see the ship close-up it's important there's some detail to enhance the general look and break up the monotony of an essentially symmetrical form. Just about every decent space ship ever modelled has little clusters of detail and assorted 'sticky out bits' here and there, and this one is no exception. During next month's column I'll be running through

the creation of what Ron Thornton calls 'numies', which for the rest of us translates into innocuous detail that does nothing - but looks like it should. In the case of my creation, this will translate into piping and mechanics in the recess on the top of the ship, plus assorted engine parts, the all-important guns, and possibly even the odd fuel pod here and there However, before moving on to the finer points it's

essential to take some time out to define the basic

surfaces before the overall structure becomes too com plex to make selection and naming of surfaces simple. Too be honest this particular rule of thumb doesn't apply quite as much to this particular model because the structure is relatively simple, but it's well worth getting used to applying surface names sooner rather than later on all your modelling jobs

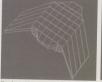

AND COMING

In the next issue I'll be adding the finishproblem of texturing. Particular points ing of various textures in the colour.

If there's enough space I'll also put the model in context, with engine flares and a suitable virtual universe for it to quent issue.

Start with the basic cube and see what your imagination can do - but don't forget to keep your original sketches close by. It's easy to model yourself into a corner

Use a few stretch, taper and move commands combined with the odd slice and you're on your way into deep space

From here on it's just a question of adding fine detail and the all-important texture maps. Don't forget to tune in next month for the fine points

SUPERDOUBLE CD PACK

The superb SuperDouble CD-ROM is back! Using an excellent 2.4 speed drive from Sony, this CD-ROM provides outstanding performance at an amazing price. With a 360kBs data transfer rate and a 20ms access time, the SuperDouble CD-ROM provides all the speed for the power user:

The SuperDouble is fully compatible with the new Squirrel MPEG card, supporting the industry standard VideoCD (White Book) format.

The SuperTouble CD-ROM pack includes the award-winning AGA Experience CD-ROM—rated 93% in issue 79 of Amiga Format. This CD-ROM is crammed full of pictures, utilities, demos, animations and tools for AGA Amigas. The SuperTouble pack also includes the Lusts Aminet CD-ROM This disk is brimming with the Lites IP D, shareware, utilities, demos and picture files from the Aminet archives on the internet.

A full classic Squirrel is also included in the pack. This allows easy connection of any SCSI peripheral to the AL200. The package has all the necessary drivers and software for easy connection of hard drives, CD-ROMs and removable disk drives, such as the Zin²² Drive, to your Amis.

Jaz is a revolutionary 1Gb removable hard disk system for any Amiga with SCSI. Like a Zip drive on steroids, Jaz provides astonishing performance. Offering data transfer rates of up to AMILY.

up to 6MB/s and access times of under 12ms. For full information on this amazing SCSI peripheral contact 18800 Surface.

Cinema4D

Professional Ray-Tracing and Animation for your Amiga

The Cinema4D animator brings you even closer to the world of "virtual reality", breathing life into objects and scenes. Whether you have your spaceship dock with a spacestation, or take a tour around the darkest dungeonwith Cinema4D it's so simple. lust a few mouse clicks and you

ill have your objects ove realistically throu ne and space

Cinema4D also include MagicLink, the flexible object converter. MagicLink converts all

object converter.
MagicLink converts all
popular object formats
(Imagine, Sculpt, DXF,
Reflections, etc.) to
Cinema4D format & back.

SQUIRREL MPEG

Bring the cinema into your home and onto your computer with Squirred MPEG". Playing the popular VideoCD and CDI CD-RCMs as well as raw MPEG streams. Squirred MPEG brings high quality digitally amestered images and 16-bit stereo sound to you and your Amiga. Squirred MPEG is a SCSI peripheral that can be used in conjunction with

any SCSI controller, such as the Classic Squirrel* or Surf Squirrel*, and any VideoCD compatible CD-ROM. Squirrel MPEG can also be used as a stand-alone unit, with a SCSI CD-ROM, as an addition to your TV, Video and Hi-Fi setup.

Available from March 1996, Squirrel MPEG is the latest in an established line of ground-breaking products, for you and your Amiga, from HSGoft

Studio V2 Professional

The original colour management

Use Studio 2 to get the most out of your printer. With its powerful Workbench drivers, you will get outstanding printed results from your applications, every time.

Studio 2 brings professional

screen match the colours on your printer.

Studio 2 is also directly supported by the popular printer
