## Get Real!

### Falcon '040

The fastest A1200 expansion ever on test inside – competition heats up for the first '060

### REAL 3D

A fully working, complete 3D

rendering system that will run on any 1Mb Amiga

Three dimensional graphics brought to life on your Amiga  
We give you the tools and show you how inside

### Back on Sale!

The return of the Amiga to the High Street, plus new bundle revealed

### Tiny Troops

Small soldiers engage in sandbox

strategy in this exclusive five level demo from Mindscape. ECS Amiga or better required

### Pinball Mania

Reviewed – the game that will relaunch A1200

Cinema  
4D

Super  
Streetfighter

Info  
Nexus

Falcon

### Amiga Atrophy?

Details of a new game that pushes the boundaries of AGA technology – page 12

## floppy drives

### 3.5 super xl drive

The Super XL Drive allows you to store 3.5MB on a high density disk.

3.5 SUPER XL DRIVE ..... £129.95

### 1.76 xl drive

The XL Drive allows you to store a 1.76MB on a high density disk.

1.76 XL DRIVE EXTERNAL ..... £79.95

1.76 XL DRIVE INTERNAL ..... £75

1.76 XL DRIVE A4000 ..... £75

PC808B EXT-POWER DRIVE ..... £49.95

### internal drives

PC881 A500 ..... £30.95

PC882 A2000 ..... £35.95

PC883 A600/1200 ..... £35.95

## hard drives

### HEWLETT PACKARD

1 GIGABYTE 3.5 SCSI ..... £459

### MICROPOLIS

2 GIGABYTE 3.5 SCSI ..... £659

4 GIGABYTE 3.5 SCSI ..... £1099

9 GIGABYTE 3.5 SCSI ..... £2199

### HITACHI

340MB 2.5 IDE ..... £189

510MB 2.5 IDE ..... £299

810MB 2.5 IDE ..... £599

1 GIGABYTE 2.5 IDE ..... £719

### OTHERS

80MB 2.5 IDE ..... £70

120MB 2.5 IDE ..... £95

### m-tec hd

External IDE hard disk for the A500 comes complete with an internal ROM switcher, and upgradable to 4MB RAM

M-TEC AT500 BARE ..... £99

M-TEC AT500 420MB ..... £259

MEMORY REQUIRES 30-PIN SIMMS

## floppy expander

Save 1.5MB on a standard floppy drive and 3MB when used in conjunction with the XL Drive 1.76.

FLOPPY EXPANDER ..... £10

## disk expander

Disk Expander can add up to 50% to your hard drive capacity and works with all drives including SCSI, IDE, Floppies and even the RAM disk. Disk Expander works on any Amiga with any Kickstart.

DISK EXPANDER ..... £25

## overdrive hd

External PCMCIA 3.5" IDE hard disk

OVERDRIVE BARE ..... £99

OVERDRIVE 420MB ..... £259

## dat drives

2 TO 4 GIGABYTE ..... £659

4 TO 8 GIGABYTE ..... £899

2 TO 4 CARTRIDGE DL90 ..... £12

4 TO 8 CARTRIDGE DL120 ..... £19.95

## optical drives

128 OPTICAL ..... £479

230MB OPTICAL ..... £719

1.3 GIGABYTE OPTICAL ..... £1999

230MB OPTICAL DISK ..... £29.95

1.3 GIGABYTE DISK ..... £139.95

## external cases

SCSI case suitable for CD-ROM/HD/DAT and Optical drives.

5.25" SCSI or IDE CASE ..... £79.95

3.5" SCSI or IDE CASE ..... £79.95

## zip drive new

ZIP DRIVE 100MB SCSI ..... £179.95

100MB DISKETTE ..... £15.95

ZIP DRIVE REQUIRES SQUIRREL SCSI INTERFACE

## video backup 3

Backup to 520MB onto a 4hr VHS tape. Version 3 has new backup modes for Amiga's with a 68020 or higher CPU.

VIDEO BACKUP SCART ..... £65

VIDEO BACKUP PHONO ..... £60

UPGRADE TO VERSION 3 ..... £20

## hisoft

SQUIRREL SCSI INTERFACE	£59.95
AURA	£79.95
MEGALOSOUND	£29.95

## amiga 4000

### a4000 tower

#### new

The tower comes complete with 6 x 5.25" drive bays, 5 x 3.5" drive bays, 7 x Zorro slots, 5 x PC slots, real time clock and a 230 watt power supply.

A4000 TOWER ..... £349

### aga flicker fixer

ScanDouber II is a full 24-bit AGA flicker fixer which automatically de-interlaces all AGA screen modes and scan doubles non-interlaced PAL/NTSC modes to allow VGA monitors to display them. Supports VGA, S-VGA and Multiscan monitors. Pixel sharp picture, even at 1440 horizontal resolution and has a standard 15-pin VGA type connector. Comes with composite videoS-VHS outputs.

SCAN DOUBLER II ..... £399

## tandem cd-de

Connect a CD-ROM, Squest and any IDE hd to your A2000/3000/4000. Comes complete with cable and s/w. ROM 2.04 or above.

TANDEM CD-DE ..... £69

### octogen scsi-2

SCSI-2 controller card for the Amiga. A2000/4000. Upgradable to 8MB RAM.

OCTOGEN 2008 ..... £129

..... award winning amiga peripheral manufacturers .....

# gvp products

Power Computing Ltd are now the official joint owner and manufacturer of Great Valley Products Inc. For more information, please call 01234 273000.

## a4000 68060

A 68060 accelerator board for the A4000 running at 50MHz and allowing up to 128MB of user installable memory and a SCSI-II hard disk controller. The board can be configured with either 4MB, 8MB, 16MB or 32MB industry standard SIMMs.

A4000 68040 (0MB RAM) ...	£699
A4000 68060 (0MB RAM) ...	£829
4MB STANDARD ADD ...	£139
4MB GVP ADD ...	£159

## a2000 68060

A 68060 accelerator board for the A2000 running at 50MHz and allowing up to 128MB of user installable memory and a SCSI-II hard disk controller.

A2000 68040 (0MB RAM) ...	£TBA
A2000 68060 (0MB RAM) ...	£TBA
4MB STANDARD ADD ...	£139
4MB GVP ADD ...	£159

## gvp ram

Official GVP RAM SIMMs.

4MB GVP RAM ...	£159
16MB GVP RAM ...	£549

## gvp hc-8 scsi

SCSI hard card which can fit 8MB of RAM on-board.

HC-8 SCSI CARD ...	£99
--------------------	-----

## gvp g-lock

Award winning Amiga Genlock.

G-LOCK AMIGA GENLOCK ...	£259
DSS-8 SOUND SAMPLER ...	£55

## io-extender

Zorro II card that provides an additional serial port, parallel port and connection for optional RS422 and RS232 port. Call for details.

IO-EXTENDER ...	£59
-----------------	-----

## a500 68020ec

A 68020 EC processor accelerator card for the A500 and A500+, with an option to fit a 68881 or 68882 co-processor (PLCC or PGA). This card can fit up to 4MB FAST RAM and is fully auto-configuring.

NOT COMPATIBLE WITH GVP HARD DRIVE

A500 68020 EC 0MB RAM ...	£99.95
A500 68020 EC 4MB RAM ...	£239.95

## megachip ram

Increase your Amiga 500/2000 chip RAM to a total of 2MB. MegaChip does this by using its own 2MB RAM and also now includes a 2MB Fat Agnus. No soldering is required.

MEGACHIP RAM ...	£159.95
------------------	---------

VGA ADAPTOR ...	£15
-----------------	-----

## a500 2mb ram

A 2MB RAM board for the A500 which fits in the trap door slot.

A500 2MB RAM ...	£90
------------------	-----

## MEMORY CARDS

512K RAM WITH CLOCK ...	£24.95
512K RAM WITHOUT CLOCK ...	£19.95
A600 1MB RAM ...	£39.95
A500+ 1MB RAM ...	£29.95

### CLOCK CARTRIDGE

Our unique and highly rated external Clock Cartridge will enable your Amiga to continually store the correct time and date in its own battery backed memory. Simply plugs onto the back of the Amiga and does not invalidate the warranty. Compatible with ALL Amigas

**IDEAL FOR THE A1200**

**ONLY £19.99**  
(plus £1.00 postage and packing)

### MEMORY EXPANSIONS

A1200 trapdoor fitting memory expansions feature a battery backed clock and a socket for an accelerator FPU

**NEARLY DOUBLES THE SPEED OF THE A1200**

2mb **£114.99**  
4mb **£174.99**  
8mb **£284.99**

**A600 MEMORY EXPANSIONS**  
1MB WITHOUT CLOCK **£34.99**  
1MB WITH CLOCK **£39.99**

### A500 & A500+ HARD DRIVES

These hard drives simply push onto the side of the A500 or A500+ and will give your computer all the benefits that hard drives offer. The drives are supplied formatted, partitioned and have Workbench installed for immediate use. Full instructions and software supplied.

The hard drive also has the facility to add 2, 4, 6 or 8mb of RAM inside it.

**VERY SIMPLE TO USE**

**A500 120mb HARD DRIVE £189.99**  
**A500 425mb HARD DRIVE £229.99**  
Additional RAM for the hard drive **£89.99 per 2mb**

### SPEAKERS

#### AIWA SC-C55

Top of the range 30 Watt Aiwa amplified speakers offer tremendous volume and sound definition. Features include **SUBSONIC SENSER** control and **ENTHUSIASTIC SUPER LINEAR BASS**

Simply plug into the two phono plugs at the rear of the Amiga or into the headphone socket on your CD-ROM drive.

**IDEAL CHRISTMAS PRESENT**

### 80 WATT MULTI MEDIA SPEAKERS

Superb 60Watt Hi-Fi quality speakers with separate bass and treble controls.

**AIWA SPEAKERS £59.99**  
**80WATT SPEAKERS £49.99**

### ANTIVIRUS

Anti Virus Professional is the most powerful tool for detecting and removing viruses. Anti Virus pro will check and device hard drives, floppy disks and even CD ROM drives for viruses. Very straight forward to use, includes a full 50 page manual.

**ORDER NOW BEFORE A VIRUS DESTROYS YOUR SYSTEM !!!**  
PLEASE PHONE FOR A FULL INFORMATION SHEET

**A MUST FOR EVERY AMIGA USER**

**ANTIVIRUS PROFESSIONAL £39.99**  
(Plus £1.50 for postage and packing)

### DISCOLOGY

DiscoLOGY is the ultimate in disk copying power for the Amiga. The package comprises the DiscoLOGY Disk, manual and DiscoLOGY cartridge for making copies of heavily protected programs with an external disk drive. DiscoLOGY will also format disks, check disks for errors etc.

PLEASE PHONE FOR A FULL INFORMATION SHEET

**DISCOLOGY £39.99**  
(plus £1.50 postage and packing)

**AWESOME COPYING POWER**

### SCSI HARD DRIVES

High speed 3.5" Quantum SCSI hard drives with or without, a high quality enclosure with its own power supply.

**HIGH SPEED QUANTUM DRIVES**

**420mb £214.99**  
**540mb £239.99**  
**850mb £284.99**  
**INTERNAL VERSIONS DEDUCT £54.99**

### SIMMS AND FPUS

72 pin simms suitable for Apollo accelerators, A4000, A1200 memory expansions etc.

1mb **£39.99**  
2mb **£77.99**  
4mb **£129.99**  
8mb **£239.99**

**LOW PRICE MEMORY**

**33mhz 68882 FPU (plcc) £49.99**  
**40mhz 68882 FPU (plcc) £69.99**  
**50mhz 68882 FPU (PGA) £79.99**  
All FPU's are supplied with crystal oscillators

### CASES

External cases with in built power supplies and cooling fans for 3.5" hard drives and CD ROM drives.

**NEW RANGE**

**3.5" HARD DRIVE CASE £54.99**  
**CD ROM DRIVE CASE £59.99**

## SPEEDCOM MODEMS

Our highly rated, top quality feature packed modems are ideal for Amiga users. All modems include our **FREE WOODEN ACCESSORIES PACK** (worth **£19.99**) which includes a cable to connect the modem to the Amiga, NCOMM comms software, Amiga Guide to Comms and a list of Bulletin Boards from which you will be able to download vast amounts of free software as well as have access to EMail facilities.

- MNP 2-4 Error Correction
- MNP 5 Data Compression
- Fax Class 1 and II compatible, Group 3
- Hayes Compatible
- Full 80 page manual
- 12 Months guarantee

**SPEEDCOM+B**  
(14,400 V32bis) **£94.99**

**SPEEDCOM+BF**  
(28,800 V34) **£174.99**

**INTERNET  
READY**

**SUPER  
LOW PRICES!!!**

## SCSI CD ROM DRIVES

**AIWA ACD-300**  
Top of the range external CD ROM drive. Suitable for use with any SCSI interface. Ideal with the Dataflyer SCSI+.

**AIWA ACD-300**  
ONLY **£167.49** OR  
**SAVE £10.00**  
WHEN PURCHASED  
WITH A DATAFLYER SCSI+

## CHINON CD ROM

Superb high quality, low cost Chinon external SCSI CD ROM drive in a top quality fan cooled case or available as an internal unit.

**CHINON EXTERNAL  
CD ROM DRIVE £124.99**  
or COMPLETE WITH SQUIRREL  
FOR ONLY **£159.99**

## QUAD SPEED CD ROM DRIVE

Amazing value quad speed external SCSI CD ROM drive in a top quality enclosure.

**QUAD SPEED  
CD ROM DRIVE £239.99** OR  
**SAVE £10.00**  
WHEN PURCHASED WITH  
A SCSI INTERFACE

## DATAFLYER SCSI+

The Dataflyer is a 16 bit SCSI II controller card that converts the signals on the internal IDE interface to also run SCSI devices at the same time as the IDE hard drive.

The Dataflyer SCSI+ will operate upto 5 SCSI devices such as CD-ROMs, hard drives, SyQuest removable drives, tape back up drives etc. Unlike other SCSI interfaces, the Dataflyer SCSI+ is compatible with all known accelerators etc and it does not stop you from utilising any of the important expansion ports on your A1200.

The Dataflyer SCSI+ easily installs into the A1200 (simply pushes in, no need to remove the metal shield) and provides a 25 way D connector through the blanking plate at the back of the A1200. Full instructions and software supplied.

**NEW PRODUCT  
EXCLUSIVE  
TO SIREN**

## 2.5" HARD DRIVES

Our high speed 2.5" IDE hard drives for the Amiga A1200 & A600.

computers come complete with fitting cable, screws, partitioning software, full instructions and 12 months guarantee. All drives supplied by us are formatted, partitioned and have Workbench (WB2 for the A600 and WB3 for the A1200) installed for immediate use. Fitting is incredibly simple; if you can plug the mouse into the mouse socket, you will be able to plug the hard drive into the hard drive socket.

PLEASE PHONE FIRST!

All prices include VAT. Postage and packing  
will be charged at £3.50 per order (S.U.K.),  
£7.50 Europe and £12.50 rest of the world.

# AMIGA FORMAT

ISSUE 77 ■ NOVEMBER 1995

## AMIGA NEWS

The Amiga Magic packs contain a standard A1200 with a plethora of software.

**New Amiga bundles have hit the streets, but do they live up to the expectations?... p12**

## MAIN FEATURE

### Getting into 3D

This is your chance to find out all there is to know about how to fully explore the third dimension. **p41**

### Plus:

We teach you all the ins and outs of Real 3D in our step-by-step tutorial. **p28**

## SERIOUSLY AMIGA

<b>Introduction</b>	89
<b>Cinema 4D Preview</b>	91
This has been Germany's favourite renderer for a long time. Now version two is hitting the UK shortly, we take a sneak look at it.	
<b>Falcon 040</b>	92
Until now, the A1200 has always played second fiddle to the A4000 in terms of speed, but will the Falcon accelerator change all that?	
<b>ScanDoublers AGA flicker-fixer</b>	95
Interlaced screens are bad for your eyes and can flicker like crazy - is this new flicker-fixer the remedy?	
<b>Apollo 1230</b>	97
It may not have an '040 chip, but the Apollo 1230 can still make your A1200 run six times as fast.	
<b>InfoNexus and DataNexus</b>	100
Could this package help keep your life in order?	
<b>Power Stitch 256</b>	105
This program will give you a quick and easy way of producing great cross stitch cloth designs.	
<b>NEC 6-speed CD-ROM drive</b>	107
How useful can a super fast CD-ROM drive be?	
<b>CD-Write</b>	108
Re-writable CD-ROMs? Can it really be true?	
<b>CD-ROM round-up</b>	110
Five stonking CD-ROMs, three of which earn a Format Gold!	

## SCREEN PLAY

Page 37

### Pinball Mania

Chosen as good enough to lead the new Amiga Magic pack, Amiga Format puts it under the microscope. **p51**

## Every new Amiga game reviewed and rated!

### Previews

**Super Mario Kart** look-alike Virtual Karting is given a test drive as is **Pole Position: F1 Manager**, **Thomas the Tank Engine Pinball**, **Trucksuit Manager 2**, **Seventh Sword of Mendor**, **Star Crusader**, and **Super Tennis Champs**. **Wowee!**

### Charts

**Pinball Mania**  
**Hollywood Hustler**

### LEFT: Super Streetfighter CD<sup>32</sup>

Men beat up women, women beat up men... and no one calls the police.

### RIGHT: Hollywood Hustler

A card game where it's a game in itself just trying to play the game.

<b>Re-releases</b>	76

## Coverdisk A: Real 3D Classic p140

We are giving away the full *Real 3D Classic* package, together with a covermounted 3D book, that will enable you to create some wonderful images on even a 1Mb Amiga. We have also got together with Activa to bring you some very special *Real 3D* upgrade offers.

## Coverdisk B: Tiny Troops p138

Imagine playing Cannon Fodder mixed together with the control interface of Lemmings, but on cute backgrounds. Then you are imagining *Tiny Troops* and these little troopers can be found on our games Coverdisk this month.

## THE ENHANCED WORLD p33

There are at least a dozen simple ways that a game can be made more of a joy to play. Join us on our quest for great games into the "Enhanced World".

## Falcon p92

The Falcon 040 will take your A1200 to the limit. This accelerator board can handle approximately 18,670 000 instructions every second, making it decidedly nippy.

## YOUR GUARANTEE OF VALUE

This magazine comes from Future Publishing, a company founded just nine years ago but now selling more computer magazines than any other in Britain. We offer:

- BETTER ADVICE.** Our titles are packed with tips, suggestions and explanatory features, written by the very best in the business.
- STRONGER REVIEWS.** We have a cast-iron policy of editorial independence and our reviews give clear buying recommendations.
- CLEARER DESIGN.** You need solid information fast. So our designers highlight key elements by using charts, diagrams, summary boxes, and so on...
- GREATER RELEVANCE.** At Future, Editors operate under two golden rules:
  - Understand your readers' needs.
  - Then satisfy them.
- MORE READER INTERACTION.** We draw on readers' contributions, resulting in the liveliest letters pages and the best reader tips. Buying one of our magazines is like joining a nationwide user group.
- BETTER VALUE FOR MONEY.** More pages, better quality - magazines you can trust.

# Ami-FileSafe

"It makes as much difference as adding some fast SCSI Zorro III controller from hell".

all quotes from Internet Review:  
(comp.sys.amiga.reviews)

**Ami-FileSafe**  
The NEW  
de facto standard  
Filing System for your  
Amiga

pro version

RRP £69.75 inc VAT  
for larger & multi-user systems

Secure filing system No more corrupt disks when  
applications crash whilst writing to disk!!  
Super Fast - much faster than FFS.  
Instant Directory Listings  
Parallel access and negligible performance loss!  
Efficient use of disk space.  
Large directories do not decrease  
operating performance.  
Multi-User Filing System Support

"There's no doubt about it. This is one \*SAFE\* mother this Ami-FileSafe system".

p&p £3

**User Version Limits**

Single Hard Drive  
Up to 650Meg  
No MuFS  
Private user licence  
Otherwise as Pro-Version

## AF GUIDE TO BUYING MAIL ORDER TEN STEPS TO SAFETY

When you're buying from any mail order company, follow these Amiga Format guidelines:

**1** Before you send any money for goods, ring the supplier to make sure the item you require is in stock. Ask questions about the company's policy on delivery and returns of faulty equipment. Make sure there are no hidden costs such as postage and packaging. Find out when you can realistically expect to receive your goods.

**2** Always read the small print on advertisements.

**3** Beware companies that do not include their address on their adverts. Avoid companies which do not answer or return your calls.

**4** The best method of payment is by credit card. If ordering goods of more than £100 in total value, you are legally entitled to claim compensation from some credit companies if the retailer goes bust. Check your credit card company's policy. You can also try to get extra insurance in advance.

**5** If you're not paying by credit card, pay by cheque. Never send cash and avoid postal orders.

**6** Keep records. If you are buying by credit card, keep a note of the time of the order and ask for an order number. When ordering over the telephone, always double-check the price.

**7** If you are sending a cheque, keep a note of the cheque number, the date and the exact value. Make sure you know the name of the mail order company.

**8** When you receive your goods, check them carefully. If anything is missing or faulty, contact the supplier immediately.

**9** Always order from the most recent issue of Amiga Format.

**10** If a problem arises, contact the supplier in the first instance. Calmly and politely tell them your problem. Most problems turn out to be minor hitches or misunderstandings that can easily be resolved. If you think you have a genuine grievance, contact your local Trading Standards Officer. The number is in the phone book.

**I**t is often the case that quite a few strange things happen during the production of the average issue of *Amiga Format*. Pictures come out wrong; pages go missing; even staff go missing sometimes.

But nothing has been quite as strange as the overpowering sense of general strangeness now that we know the A1200 will be on sale again across the country.

It has been a very interesting time since the great Commodore collapse. No other home computer would have survived and the fact that the Amiga is back at all, however many units are sold over Christmas, owes a lot to loyal users such as yourselves.

Amiga Technologies owes you a big vote of thanks. Let me add my personal thanks to that and give you my assurance that as long as people are still using Amigas, we'll be right here producing the best magazine we can.

The strength of the Amiga bundle has been a bit of a surprise and the full details of the bundle, plus industry comments, kicks off our news coverage on page 12.

The games that have been included in the bundle are also a bit of a surprise.

Unfortunately not a pleasant one. It is not the games that were chosen so much as the ones that got away, so to speak. However, you can discover for yourselves what we think of *Pinball Mania* on page 51.

But I am getting ahead of myself. I haven't even mentioned our rather fantastic Coverdisk yet. *Real 3D* is quite tremendous software and it will run on anything from an A200 to an A1000/040.

I know many of you are keen *Isomagic* fans, but you should still take a look at the disks. *Real 3D* is a solid modeller, which means that the models you create are truly scalable. It is virtually unique in this respect.

Graeme Sandford has produced an amazing feature to help you understand the processes of 3D modelling and John Kennedy kicks off our tutorial series on pages 21 and 28 respectively.

If that isn't enough for you, there are some tremendous new products out this month, including Power Computing's Falcon 040 accelerator for the A1200. Amazingly, it can be faster than an A1000/040 and will also be able to accept an 060 chip at a later date! See page 92.

You may now unfasten your safety belts. ☺

# CALL FOR A DEAL LIKE THIS?

716 LPS, 718 LPS, 720 LPS, 722 LPS, 724 LPS, 726 LPS, 728 LPS, 730 LPS, 732 LPS, 734 LPS, 736 LPS, 738 LPS, 740 LPS, 742 LPS, 744 LPS, 746 LPS, 748 LPS, 750 LPS, 752 LPS, 754 LPS, 756 LPS, 758 LPS, 760 LPS, 762 LPS, 764 LPS, 766 LPS, 768 LPS, 770 LPS, 772 LPS, 774 LPS, 776 LPS, 778 LPS, 780 LPS, 782 LPS, 784 LPS, 786 LPS, 788 LPS, 790 LPS, 792 LPS, 794 LPS, 796 LPS, 798 LPS, 800 LPS, 802 LPS, 804 LPS, 806 LPS, 808 LPS, 810 LPS, 812 LPS, 814 LPS, 816 LPS, 818 LPS, 820 LPS, 822 LPS, 824 LPS, 826 LPS, 828 LPS, 830 LPS, 832 LPS, 834 LPS, 836 LPS, 838 LPS, 840 LPS, 842 LPS, 844 LPS, 846 LPS, 848 LPS, 850 LPS, 852 LPS, 854 LPS, 856 LPS, 858 LPS, 860 LPS, 862 LPS, 864 LPS, 866 LPS, 868 LPS, 870 LPS, 872 LPS, 874 LPS, 876 LPS, 878 LPS, 880 LPS, 882 LPS, 884 LPS, 886 LPS, 888 LPS, 890 LPS, 892 LPS, 894 LPS, 896 LPS, 898 LPS, 900 LPS, 902 LPS, 904 LPS, 906 LPS, 908 LPS, 910 LPS, 912 LPS, 914 LPS, 916 LPS, 918 LPS, 920 LPS, 922 LPS, 924 LPS, 926 LPS, 928 LPS, 930 LPS, 932 LPS, 934 LPS, 936 LPS, 938 LPS, 940 LPS, 942 LPS, 944 LPS, 946 LPS, 948 LPS, 950 LPS, 952 LPS, 954 LPS, 956 LPS, 958 LPS, 960 LPS, 962 LPS, 964 LPS, 966 LPS, 968 LPS, 970 LPS, 972 LPS, 974 LPS, 976 LPS, 978 LPS, 980 LPS, 982 LPS, 984 LPS, 986 LPS, 988 LPS, 990 LPS, 992 LPS, 994 LPS, 996 LPS, 998 LPS, 1000 LPS, 1002 LPS, 1004 LPS, 1006 LPS, 1008 LPS, 1010 LPS, 1012 LPS, 1014 LPS, 1016 LPS, 1018 LPS, 1020 LPS, 1022 LPS, 1024 LPS, 1026 LPS, 1028 LPS, 1030 LPS, 1032 LPS, 1034 LPS, 1036 LPS, 1038 LPS, 1040 LPS, 1042 LPS, 1044 LPS, 1046 LPS, 1048 LPS, 1050 LPS, 1052 LPS, 1054 LPS, 1056 LPS, 1058 LPS, 1060 LPS, 1062 LPS, 1064 LPS, 1066 LPS, 1068 LPS, 1070 LPS, 1072 LPS, 1074 LPS, 1076 LPS, 1078 LPS, 1080 LPS, 1082 LPS, 1084 LPS, 1086 LPS, 1088 LPS, 1090 LPS, 1092 LPS, 1094 LPS, 1096 LPS, 1098 LPS, 1100 LPS, 1102 LPS, 1104 LPS, 1106 LPS, 1108 LPS, 1110 LPS, 1112 LPS, 1114 LPS, 1116 LPS, 1118 LPS, 1120 LPS, 1122 LPS, 1124 LPS, 1126 LPS, 1128 LPS, 1130 LPS, 1132 LPS, 1134 LPS, 1136 LPS, 1138 LPS, 1140 LPS, 1142 LPS, 1144 LPS, 1146 LPS, 1148 LPS, 1150 LPS, 1152 LPS, 1154 LPS, 1156 LPS, 1158 LPS, 1160 LPS, 1162 LPS, 1164 LPS, 1166 LPS, 1168 LPS, 1170 LPS, 1172 LPS, 1174 LPS, 1176 LPS, 1178 LPS, 1180 LPS, 1182 LPS, 1184 LPS, 1186 LPS, 1188 LPS, 1190 LPS, 1192 LPS, 1194 LPS, 1196 LPS, 1198 LPS, 1200 LPS, 1202 LPS, 1204 LPS, 1206 LPS, 1208 LPS, 1210 LPS, 1212 LPS, 1214 LPS, 1216 LPS, 1218 LPS, 1220 LPS, 1222 LPS, 1224 LPS, 1226 LPS, 1228 LPS, 1230 LPS, 1232 LPS, 1234 LPS, 1236 LPS, 1238 LPS, 1240 LPS, 1242 LPS, 1244 LPS, 1246 LPS, 1248 LPS, 1250 LPS, 1252 LPS, 1254 LPS, 1256 LPS, 1258 LPS, 1260 LPS, 1262 LPS, 1264 LPS, 1266 LPS, 1268 LPS, 1270 LPS, 1272 LPS, 1274 LPS, 1276 LPS, 1278 LPS, 1280 LPS, 1282 LPS, 1284 LPS, 1286 LPS, 1288 LPS, 1290 LPS, 1292 LPS, 1294 LPS, 1296 LPS, 1298 LPS, 1300 LPS, 1302 LPS, 1304 LPS, 1306 LPS, 1308 LPS, 1310 LPS, 1312 LPS, 1314 LPS, 1316 LPS, 1318 LPS, 1320 LPS, 1322 LPS, 1324 LPS, 1326 LPS, 1328 LPS, 1330 LPS, 1332 LPS, 1334 LPS, 1336 LPS, 1338 LPS, 1340 LPS, 1342 LPS, 1344 LPS, 1346 LPS, 1348 LPS, 1350 LPS, 1352 LPS, 1354 LPS, 1356 LPS, 1358 LPS, 1360 LPS, 1362 LPS, 1364 LPS, 1366 LPS, 1368 LPS, 1370 LPS, 1372 LPS, 1374 LPS, 1376 LPS, 1378 LPS, 1380 LPS, 1382 LPS, 1384 LPS, 1386 LPS, 1388 LPS, 1390 LPS, 1392 LPS, 1394 LPS, 1396 LPS, 1398 LPS, 1400 LPS, 1402 LPS, 1404 LPS, 1406 LPS, 1408 LPS, 1410 LPS, 1412 LPS, 1414 LPS, 1416 LPS, 1418 LPS, 1420 LPS, 1422 LPS, 1424 LPS, 1426 LPS, 1428 LPS, 1430 LPS, 1432 LPS, 1434 LPS, 1436 LPS, 1438 LPS, 1440 LPS, 1442 LPS, 1444 LPS, 1446 LPS, 1448 LPS, 1450 LPS, 1452 LPS, 1454 LPS, 1456 LPS, 1458 LPS, 1460 LPS, 1462 LPS, 1464 LPS, 1466 LPS, 1468 LPS, 1470 LPS, 1472 LPS, 1474 LPS, 1476 LPS, 1478 LPS, 1480 LPS, 1482 LPS, 1484 LPS, 1486 LPS, 1488 LPS, 1490 LPS, 1492 LPS, 1494 LPS, 1496 LPS, 1498 LPS, 1500 LPS, 1502 LPS, 1504 LPS, 1506 LPS, 1508 LPS, 1510 LPS, 1512 LPS, 1514 LPS, 1516 LPS, 1518 LPS, 1520 LPS, 1522 LPS, 1524 LPS, 1526 LPS, 1528 LPS, 1530 LPS, 1532 LPS, 1534 LPS, 1536 LPS, 1538 LPS, 1540 LPS, 1542 LPS, 1544 LPS, 1546 LPS, 1548 LPS, 1550 LPS, 1552 LPS, 1554 LPS, 1556 LPS, 1558 LPS, 1560 LPS, 1562 LPS, 1564 LPS, 1566 LPS, 1568 LPS, 1570 LPS, 1572 LPS, 1574 LPS, 1576 LPS, 1578 LPS, 1580 LPS, 1582 LPS, 1584 LPS, 1586 LPS, 1588 LPS, 1590 LPS, 1592 LPS, 1594 LPS, 1596 LPS, 1598 LPS, 1600 LPS, 1602 LPS, 1604 LPS, 1606 LPS, 1608 LPS, 1610 LPS, 1612 LPS, 1614 LPS, 1616 LPS, 1618 LPS, 1620 LPS, 1622 LPS, 1624 LPS, 1626 LPS, 1628 LPS, 1630 LPS, 1632 LPS, 1634 LPS, 1636 LPS, 1638 LPS, 1640 LPS, 1642 LPS, 1644 LPS, 1646 LPS, 1648 LPS, 1650 LPS, 1652 LPS, 1654 LPS, 1656 LPS, 1658 LPS, 1660 LPS, 1662 LPS, 1664 LPS, 1666 LPS, 1668 LPS, 1670 LPS, 1672 LPS, 1674 LPS, 1676 LPS, 1678 LPS, 1680 LPS, 1682 LPS, 1684 LPS, 1686 LPS, 1688 LPS, 1690 LPS, 1692 LPS, 1694 LPS, 1696 LPS, 1698 LPS, 1700 LPS, 1702 LPS, 1704 LPS, 1706 LPS, 1708 LPS, 1710 LPS, 1712 LPS, 1714 LPS, 1716 LPS, 1718 LPS, 1720 LPS, 1722 LPS, 1724 LPS, 1726 LPS, 1728 LPS, 1730 LPS, 1732 LPS, 1734 LPS, 1736 LPS, 1738 LPS, 1740 LPS, 1742 LPS, 1744 LPS, 1746 LPS, 1748 LPS, 1750 LPS, 1752 LPS, 1754 LPS, 1756 LPS, 1758 LPS, 1760 LPS, 1762 LPS, 1764 LPS, 1766 LPS, 1768 LPS, 1770 LPS, 1772 LPS, 1774 LPS, 1776 LPS, 1778 LPS, 1780 LPS, 1782 LPS, 1784 LPS, 1786 LPS, 1788 LPS, 1790 LPS, 1792 LPS, 1794 LPS, 1796 LPS, 1798 LPS, 1800 LPS, 1802 LPS, 1804 LPS, 1806 LPS, 1808 LPS, 1810 LPS, 1812 LPS, 1814 LPS, 1816 LPS, 1818 LPS, 1820 LPS, 1822 LPS, 1824 LPS, 1826 LPS, 1828 LPS, 1830 LPS, 1832 LPS, 1834 LPS, 1836 LPS, 1838 LPS, 1840 LPS, 1842 LPS, 1844 LPS, 1846 LPS, 1848 LPS, 1850 LPS, 1852 LPS, 1854 LPS, 1856 LPS, 1858 LPS, 1860 LPS, 1862 LPS, 1864 LPS, 1866 LPS, 1868 LPS, 1870 LPS, 1872 LPS, 1874 LPS, 1876 LPS, 1878 LPS, 1880 LPS, 1882 LPS, 1884 LPS, 1886 LPS, 1888 LPS, 1890 LPS, 1892 LPS, 1894 LPS, 1896 LPS, 1898 LPS, 1900 LPS, 1902 LPS, 1904 LPS, 1906 LPS, 1908 LPS, 1910 LPS, 1912 LPS, 1914 LPS, 1916 LPS, 1918 LPS, 1920 LPS, 1922 LPS, 1924 LPS, 1926 LPS, 1928 LPS, 1930 LPS, 1932 LPS, 1934 LPS, 1936 LPS, 1938 LPS, 1940 LPS, 1942 LPS, 1944 LPS, 1946 LPS, 1948 LPS, 1950 LPS, 1952 LPS, 1954 LPS, 1956 LPS, 1958 LPS, 1960 LPS, 1962 LPS, 1964 LPS, 1966 LPS, 1968 LPS, 1970 LPS, 1972 LPS, 1974 LPS, 1976 LPS, 1978 LPS, 1980 LPS, 1982 LPS, 1984 LPS, 1986 LPS, 1988 LPS, 1990 LPS, 1992 LPS, 1994 LPS, 1996 LPS, 1998 LPS, 2000 LPS, 2002 LPS, 2004 LPS, 2006 LPS, 2008 LPS, 2010 LPS, 2012 LPS, 2014 LPS, 2016 LPS, 2018 LPS, 2020 LPS, 2022 LPS, 2024 LPS, 2026 LPS, 2028 LPS, 2030 LPS, 2032 LPS, 2034 LPS, 2036 LPS, 2038 LPS, 2040 LPS, 2042 LPS, 2044 LPS, 2046 LPS, 2048 LPS, 2050 LPS, 2052 LPS, 2054 LPS, 2056 LPS, 2058 LPS, 2060 LPS, 2062 LPS, 2064 LPS, 2066 LPS, 2068 LPS, 2070 LPS, 2072 LPS, 2074 LPS, 2076 LPS, 2078 LPS, 2080 LPS, 2082 LPS, 2084 LPS, 2086 LPS, 2088 LPS, 2090 LPS, 2092 LPS, 2094 LPS, 2096 LPS, 2098 LPS, 2100 LPS, 2102 LPS, 2104 LPS, 2106 LPS, 2108 LPS, 2110 LPS, 2112 LPS, 2114 LPS, 2116 LPS, 2118 LPS, 2120 LPS, 2122 LPS, 2124 LPS, 2126 LPS, 2128 LPS, 2130 LPS, 2132 LPS, 2134 LPS, 2136 LPS, 2138 LPS, 2140 LPS, # Back with a bang!

# AMIGA FORMAT news

**A**miga Technology UK's bold sales prediction of 60,000 A1200 units sold by Christmas has received a boost with the strongest line-up of productivity and multimedia software yet seen in any Amiga bundle.

The new bundle, named Amiga Magic, will be sold in two configurations: a floppy version and a hard drive version – the first time the A1200 has been available with an official hard drive option.

The floppy version will cost £399, feature *Workbench 3.1*, and comprise of the following, previously unreleased, software: *Wordworth 4 SE*, *Datastore*, *Organiser* and *TurboCalc* from Digita; *Personal Paint 6.4* from Cloanto; and *Photogenics 1.1a* from Almathera. The games software consists of *Pinball Mania* from 21st Century Entertainment and *Whizz* from Flair.

The hard drive version costs £100 more at £499 and sports a 170Mb hard drive with *Workbench 3.1* already installed. Aside from all of the above software, the bundle will also include the *Scala MM300* multimedia package.

## THE SOFTWARE THEY CHOSE

The bundling strategy chosen by Amiga Technologies UK hinges on the productivity and graphic side of the Amiga. Amiga Format warmly welcomes the approach. Here's what you'll be picking up with the machine:

## DATASTORE V1.1

Format reviewed version 1.0 of *Datastore* in issue 69. We awarded it 88% and considered it to be: "Not exceptionally fast, but very friendly and packed with features".

*Datastore* is a flat file database which means that it's laid out in a linear fashion, much like the pages of a book.

As such, it's very easy to use and only complete novices will find themselves referring to every page of the supplied manual.

Digita's spokesman declared that the differences between version 1.0 and 1.1 are mostly bug fixes from the original, although, file integration with *TurboCalc* has also been included.

Again, another solid program with strong utilitarian worth.

## WORDWORTH 4 SE

In AF67, Nick Veitch awarded £49.95-package *Wordworth 3.1 SE*, 91% and concluded that it offered: "All the best bits of *Wordworth 3.1* at a bargain price".

*Wordworth 4 SE*, offers further improvements, according to Digita. Upgraded features of the pack version include drag and drop style sheets, and numerous performance improvements.

Perhaps most important is the modularity of design which allows version 4 SE to integrate with *TurboCalc 3.5* – another member of the pack. Digita's *Print Manager* is also provided, so anyone could be printing impressive documents within hours.

Anyone looking for a cheap, efficient method of running a small business should definitely consider the package.

## TURBOCALC V3.5

The last time Amiga Format visited *TurboCalc*, an electronic spreadsheet, it was in its version 2.0 incarnation. We awarded it 84% in AF65 and concluded that it was: "...ideal for small business use".

At the time of the original review, it didn't boast the claimed file integration with all of the above packages. This alone should make it more attractive to small businesses and people on a tight budget.

Along with *Wordworth* and *Data Store* this software completes the kind of software suite you would expect to find bundled with more expensive computer systems aimed at small business.

*TurboCalc* is now being developed and produced by Digita.

## ORGANISER

Quite literally a filofax tucked away inside the electronic heart of the Amiga, *Organiser* consists of four sections: a calendar, diary, address book and supplements section. Just like *Datastore* and *Wordworth 4 SE*, before it, file integration with *TurboCalc* is an integral part of the code. It is not as indispensable as *Datastore*, *TurboCalc* and *Wordworth*, but a very welcome addition to anyone's software collection.

- The new Amiga Magic packs are here, but what do you actually get for your money? ... p12-13
- New game pushes AGA envelope. .... p14-15

"The 68040 runs fairly hot normally, but the Falcon's CPU was actually quite cool - even when the board was left on constantly for three days it functioned properly without overheating..."

FALCON '040 PAGE 92

The hopes of a sell-out over the Christmas period have been further bolstered by the announcement that the bundles *will* be sold in Escom stores across the UK. In addition, two distributors will be taking care of distribution here - Commodore's old favourite, SDL, and, although not confirmed at the time of going to press, software distributor, Leisuresoft.

Both distributors have proven track records for excellence and are expected to obtain maximum penetration into the retail sector - the express target being that every town in the country should have around four shops stocking and selling the new Amiga bundles.

Despite the generally perceived high price point of the bundles, the nominal value of the software in the packs falls just below the £500 mark. While an excellent deal, this in itself may not be enough to shift the 60,000 expected sales due to stiff competition, media hype and market domination from corporate giants such as Sega, Sony and Microsoft.

#### WILL IT SELL?

There's no doubt that despite the high value of the Amiga Magic bundles, price is going to be a major factor in their potential success. The bundles are not likely to be snapped up straight away by existing owners looking to upgrade, who may decide to stick it out for another Christmas in the hope that standalone machines will be available at a later date.

Independent dealers may be keen to take the Amiga back at any price, but they may not order quite so many. One retailer of an important independent chain based in Norfolk, Will Copeland, has gone on record stating that if a bundle, or even a standalone machine, had gone on sale at £299, he would have ordered 100 straight away. At £399, he's stated that he'll only be buying ten.

Conversely, Giles Hunter, Managing Director of Guildhall narrated a tale to us at ECTS about his chain of five retail outlets. During the summer they get hold of around 100 A1200s. Due to the high price they had obtained them at, they were forced to sell them on to the public at £350 as standalone machines.

The first couple of weeks on sale were discouraging. In the first week they'd sold one. In the second week five had gone. In the third week fifteen departed from the shops. By the fifth week all of the machines had been sold. This was without advertising of any kind. Their availability had passed through the Amiga grapevine and in retrospect they'd been quickly snapped up.

Due to this, Giles reckons he'll be more than happy to stock the new bundles. "They'll sell, and sell well. There's a latent market out there just waiting to snap them up. 60,000 seems a bit optimistic, but you never know..."

### PERSONAL PAINT 6.4

Hailed as a *Deluxe Paint* beater, Clonto's *Personal Paint* art and animation package represents a terrific introduction to the heady world of graphics packages on the Amiga. Its design means that it's easy to learn and use. The suite of features includes image processing, stereogram generation and animation editing.

Nick Veitch, Editor of *Amiga Format*, awarded version 6.1 a tremendous 88% in AF68 and couldn't recommend it strongly enough. "It can only be a matter of time and upgrades before this is the best paint package ever," he asserted.

Could this be the upgrade that makes all the difference? We shall be reviewing this version of the software in the next issue.

### PHOTOGENICS 1.1A

The strongest of the software packages in the bundle, *Photogenics* from Almathera is an image processor so powerful that it has the potential to beat *Adobe Photoshop*.

We were so impressed with *Photogenics v1.0* that we awarded it a Format Gold of 95% in AF68 and judged it to be: "...the image manipulation tool that the Amiga has been waiting for a long time".

New users and users upgrading from non-AGA machines will find *Photogenics* a dream to use. It offers unrivalled power and is one of the many programs that users of other platforms would die for.

An upgrade for existing *Photogenics* owners and those purchasing the bundle is expected to be announced soon.

### PINBALL MANIA

The fourth in a series of pinball titles from 21st Century Entertainment.

The game offers four different tables. The game sports its own features and gaming strategies, and on the whole is a reasonably entertaining game. Surprisingly, though, considering that it's A1200-only, it isn't as good as 21st Century's previous title, *Pinball Illusions*. As a showcase for the power of the AGA chipset, it fails.

Most of the Amiga game developers we spoke to expressed joy that *Pinball Mania* had been included in the pack. "New Amiga Magic pack owners are going to be gagging to play a good game after trying out the games in this bundle," said one well-known developer.

### WHIZZ

"Stinky armpits" and "minging oxters" were the choice words used to describe this 38% effort in AF71.

While we certainly can understand the inclusion of *Pinball Mania* in the Amiga Magic bundle - strong brand name, popular appeal, easy to play - the possible merits of *Whizz* are beyond us. Though A1200-only, it doesn't look any better than A500/600 games, such as *Cannon Fodder*.

The control system is awkward beyond belief and the gameplay content is almost non-existent.

Once again, game developers have cautiously welcomed the inclusion of *Whizz* because they reckon it'll be given about an hour's play and then never be played again. Where was *Gloom* or *Shidmarks* we ask?

## The Smith Column

I've just got back from ECTS (The European Computer Trade Show) at downtown Olympia where the suits and pony tails (a lower ponytail count this year, what with Gazza's short-haired fashion statement) were milling around, pressing the flesh

and maximising the upsiding of the unit throughput scenarios. ECTS is a trade show, a place where companies come to 'do business', to show off their new wares and to generally flash the business cards.

In the best traditions of investigative journalism, I sat around the bar with several over-priced bottles of Bud, waiting for people to bustle past and eventually bumped into David Pleasance. For those of you new to the Amiga, David was the join top banana at Commodore UK before the Great Flasco.

Well, aside from looking a little aged, David seems to be doing okay for himself, with a recording studio up and running, but he, like me, was bemused to see no large Amiga presence at Olympia. Aside from a few games (including Team17's - for whom I work - Worms) the Amiga had almost been sliced out of history. Why is this? Here I was at Europe's premier forum for computing shenanigans, and could I see a stand with "Amiga! The Future is Here!"

**The scenario being mooted in some quarters that should know better is that Escom are simply getting rid of Amigas left in the warehouses.**

writ large upon it? Could I fudge. There just doesn't seem to be a push for the technology, unless you consider the following rumoured scenario which I would like to see refuted or otherwise from official sources before I'm an old man (October 30th this year if you want to send me a card):

The scenario being mooted in some quarters that should know better is that Escom are simply getting rid of inventory (the Amigas left in the warehouses), hence the stupid pricing and the new bundle, but no new machines to speak of for the average person. The company merely bought the name and the technology in order to use the chipset for set-top boxes that can be sold to enable multimedia delivery or even internet provision.

The Amiga, in fact, is heading for small black boxness, being owned by gentrified old ladies from Sutton Coldfield and Walsall, and being set on top of Sonys with Michael Barrymore playing underneath.

Now, call me a demented, drug-addled, old scrote with a Bristol Rovers' shirt for brains, but I think this could be quite a loss to the thousands of families in the country who could do with a cheap, efficient, flexible computer for the home. With all the latest Win95 furore, I would have thought that a small advertising campaign saying "Erm, the Amiga has been able to do this shit for years... and it's cheaper" would have shown some good thinking. But, hey, who am I to comment.

Contact Tim Smith on [gashead@cx.computink.co.uk](mailto:gashead@cx.computink.co.uk) and [gashead@team17.com](mailto:gashead@team17.com)

The opinions expressed in this column are hardly ever those of Amiga Format.

# Chip shortage delays accelerator wars

Although '060 chips are in production, they are not currently being shipped to Europe in sufficient quantity to satisfy demand.

The designers of both the Falcon and the Blizzard accelerator cards are claiming to have 68060 versions all-but ready - but they can't ship yet due to a worldwide shortage of the '060 chips.

The Motorola '060 is the fastest processor in the 68K family, the range of chips chosen to power the Amiga and Apple Macintosh range of computers.

The chip, which is the rough equivalent of the Pentium processor found in modern IBM compatibles, is also more efficient than earlier members of the family.

This improved efficiency and lower current requirements mean that the '060 does not generate as much heat as the 68040, which had previously been a major headache for designers.

However, one of Motorola's major customers, Apple, have chosen to

move over to another processor for their new range of computers, the PowerPC RISC chip, also manufactured by Motorola.

This and other factors have meant that although '060 chips are in production, they are not currently being shipped to Europe in sufficient quantity to satisfy demand.

It may be some more months before boards such as the Blizzard 1260 can be produced in quantity and, in a sellers' market, the chips may cost more than accelerator manufacturers counted on.

Amiga Technologies will also be attempting to secure supplies of the '060 chip for the faster version of the A400T, tentatively scheduled for a November release.

The Falcon '040 board is reviewed on page 92 of this issue.

## How Much?

At the recent Amiga Technologies press conference, the specification and price of the A400T was revealed.

Amid gasps of disbelief and muted mutterings, John Smith, UK Sales Manager of Amiga Technologies, revealed that the tower would have the following spec: Workbench 3.1, a 25MHz 040 processor, a 1Gb hard drive, 6Mb of RAM and the Amiga Magic software bundle, including *Scala MM300*.

The price has been set at a frankly astonishing £2,230 including VAT.

Compared to the price of Pentium PCs, Amiga Format believes that this price is ludicrously high and uncompetitive, even for the corporate multimedia market.

Maybe Amiga Technologies will prove us wrong. Maybe...

The A400T will undergo a re-design in the new year.

# The Amiga has Atrophied

If you look closely enough, you can see the different layers of parallax.

New Amiga software developer, Intersect Developments, has pledged themselves to the cause of innovative, AGA-specific programming techniques in games.

Their first game, a horizontally scrolling shoot-'em-up going by the name of *Atrophied* will feature, they claim, "AGA techniques and hardware tricks never seen before".

Rather than be concerned with the milestone of programming for OCS/ECS machines, Intersect have opted to squeeze every last ounce of power out of the, up till now, sadly under-utilised AGA chipset.

*Format* received a video of several levels of the game in play. The scrolling was impressive, as was the size of the main player-controlled sprites, the parallax scrolling and the use of colour.

## COMPLETE DEDICATION

Even more impressive is Intersect's commitment to the Amiga scene: "We

Underpinning Intersect's commitment to the Amiga is their plan for three more games.

are completely dedicated to the Amiga and everything it stands for..."

Despite being relatively unheard of, Intersect have been around for over nine years in one hardware programming form or another.

In their correspondence with us they mentioned that talks were in progress with a publisher.

*Format* can exclusively reveal that the publisher, barring any mishaps at the last hurdle, will be none other than Guildhall.

Guildhall, the people responsible for bringing top grade, innovative games to the UK Amigas, such as *Skidmarks*, *Super Skidmarks*, *Roadkill*, *Guardian*, *Fear*, and *Gloom*, reflect the spirit of Intersect.

"Amiga programmers are the most talented around," enthused Giles Hunter, MD of Guildhall. "They care passionately about the machine they program. That's why they come to us. They know that we treat them as people and not as numbers the way the big boys do."

*Atrophied* should be finished by mid-October, in time for a Christmas release. Three other projects are currently "under construction". We'll bring you the details as and when we get them.

## niblets

### AMIGA ARTIST EXHIBITS WALES

Amiga artist Paul Hamilton will be exhibiting his work at the Reflections Gallery in Exeter & Devon Arts Centre, Gandy Street, Exeter from 4th - 28th October.

Admission is free and visitors will be able to view Paul's dye sublimation prints at their leisure.

The pictures themselves were created using *Photogenics 1.2*, *Real 3D v2.4*, and *DPaint 4* AGA on an A4000/030.

### ATTENTION ALL AMIGA ANIMATORS

Josh Clark, Editor in Chief of *Gajin Press*, is currently working on an animated version of his cartoon strip character, Ariel High School Devil.

But he needs the help of talented Amiga animators if his idea for a commercial video is to come to fruition.

He can't guarantee payment unless the project is successful, but royalties are on offer if the video sells.

Anim8 files are the ideal format although Josh stressed that he can take almost any other format.

Any animation work is acceptable and, indeed, welcomed. Animators whose work is chosen can expect to be sent a script.

Send your animations to Josh at 2 Birkdale Drive, Immingham, Grimsby, DN40 2LB. For more information, telephone 01469 874 623.

## Multimedia madness

Unfortunately, we made a gaff in last issue's review of the excellent *Scala MM400*.

We quoted Meridian Software Distribution as the distributor of this product, when in fact it is Silica.

The correct price for *Scala MM400* is actually £299.

To order your copy, or to find out more about this program, call Silica on 0181 309 1111.

## Multi-Sync Monitor

In order to compliment the new Amiga bundles, Amiga Technologies have licensed a 15-38KHz multi-sync monitor from Microvitec.

Featuring a 14 inch screen and a .28 dot pitch, the monitor will display any of the Amiga's native resolutions.

The price has been set at a very reasonable £299 and, unlike the A4000T, represents very good value for money.

The new monitor from Amiga Technologies GmbH. Yesterday.

# The Bradford Column

Well, no doubt you've read all about the new A1200 bundle by now. Predictable it may be, but even the most jaded cynic would have to admit that there are some jolly impressive products in there.

However, with the A1200 rising in price, and PCs continuing to fall, the difference between a 486 (66MHz, 4Mb RAM, 540Mb hard drive and SVGA monitor) and an A1200HD with monitor is barely worth mentioning. Indeed, by the time this is printed, the Amiga may even be more expensive, depending on where you shop.

Trying to match the PC software bundles, with their "all things to all men" approach, is one way of reclaiming market share, but I would prefer to see Amiga Technologies offer the Amiga as solutions to particular needs. How? By launching a minimum of half-a-dozen bundled packs, each containing complimentary software packages based on a theme.

Imprecise? Not at all: the only difference between the packs would be the bundled software. A retailer would therefore only need to stock one of each software pack and just one machine, yet be able to satisfy six individual customers' requirements.

There could be packs based around business, games, video, art, music, education and creation. The creation

**"Trying to match the PC software bundles, with their 'all things to all men' approach is one way of reclaiming market share."**

pack could include something like Blitz with oodles of addons for instance, plus enough easy-to-understand tutorials (maybe from AF back issues?) to get a complete novice 'creating' almost immediately.

Amiga Technologies could then sponsor these new software authors, perhaps setting up their own label to publish the best examples. Some of the bundles could be even more carefully targeted; education could have several sub-choices, such as English, Maths, History, etc.

As for marketing, each bundle would have a different target market, so should be promoted in suitable specialist publications, such as those aimed at music/camcorder/education or whatever, enthusiasts.

Aren't salesmen these days taught to "sell the benefits – not the features"? So when Jo and Joanne Bloggs wander into their local Escom because they've been told they need a computer, the salesman should first make the effort to discover what they actually need it for and then recommend accordingly.

After all, given the choice between finding their own niche software to run on their £1,500, multimedia mega machine, or buying a complete solution in one box for £499, what do you think they'd choose? Amiga Technologies should give them that choice.

Contact Dale Bradford by fax on 01633 896087.

The opinions expressed in The Bradford Column are hardly ever those of Amiga Format.

## Gloom, Gloom, Gloom

Fans of *Gloom* will find themselves very well catered for in the next few months. Black Magic are next to release *Gloom Deluxe*, a *Gloom* Data Disk, and *Gloom 2 CD32*.

*Gloom Deluxe* will feature enhanced graphics and is set to run on any Amiga with 2Mb of RAM and an accelerator. The High Street date for release is the end of September.

The *Gloom* Data Disk caters for existing A1200 *Gloom* owners and features a cornucopia of new levels with 'enhanced' graphics. Street date is set for around the end of October.

Last, but not least, of the new offerings is *Gloom 2 CD32*. The title is going to be changed to sound a bit more exciting, but the game itself will feature the same engine, driving a set of new levels with superior graphics.

The release date has been set for the end of October.

Black Magic. One of the few developers dedicated to showing off the real power residing in the AGA chipset.

## Digita Upgrades on the way

Existing owners of Digita products may be wondering why they haven't heard about the upcoming release of *Wordworth 4* before it appeared in the Amiga Magic bundle. Jeremy Rihill, Managing Director of Digita told us:

"I am sure our users will understand that our first priority has been to support Amiga Technologies with the re-

introduction of the Amiga. Now that we have successfully accomplished that task, we are working flat out toward finishing the upgrades."

"All registered Digita users will be fully briefed and offered the opportunity of low-cost upgrades in the forthcoming Autumn edition of the Digita Newsletter."

## Final Calc – release looms

It seems like a long time ago that we previewed *Final Calc*, the final piece in an impressive suite of software from Softwood, more notable for *Final Writer*.

It was actually a long time ago – way back in *AF70* – but we haven't forgotten what promised to be the best Amiga spreadsheet software ever.

It's certainly something that would show up expensive software found on the Mac or PC, with features such as Postscript support, regression analysis, background recalc and a problem solving tool, to say nothing of an impressive selection of graphs.

It seems that after much testing, *Final Calc* is almost ready to be released to the starving masses and we hope to bring you the definitive review in the next issue.

# Leading Edge Set To Explode With Guildhall

Eight player entertainment with the use of one serial link. Beat that Mr. Sony.

**L**eading Edge, a young, dynamic, innovative software developer look set to tie the knot with software distributor Guildhall in a move that should prove lucrative for both parties.

Leading Edge are putting the final touches to their AGA-only *Bombberman*/DynaBlaster clone, *Blitz Bombers*. As the name implies, the program has been written using the programmers' development system of choice, Blitz Basic.

We'll have a full five levels of the game on next month's Coverdisk.

As a bit of a sneak preview, we can let you know that *Bombers* will feature 80 levels taking place over seven different scenarios and include four sub

80 levels, seven scenarios, and up to eight-player entertainment. Makes the SNES look a bit poor when all's said and done.

games such as; *Tag*, *Pong*, *Pac-Man*, and *Go Kart*.

Alluringly, Leading Edge have followed the lead set by Acid's *Super Shidmarks* and included a Hi-Res 8-player link which will display the whole maze over a serial link with two Amigas and two screens.

Also included in Leading Edge's development plans is a game called *Halls of Champions*. This is going to be a *Virtual Fighter* style, 3D polygonal fighting game.

The fact that this hasn't been

attempted before hasn't daunted Leading Edge.

We wish them luck in their endeavours and look forward to reviewing the finished edition of *Blitz Bombers*.

## niblets

### A1000 FIXES.

Binary Emotions, the programmers of *Spirits Legacy* are offering a unique solution to readers who may experience problems with older games that do not work with A1000s/A4000s.

They claim that they can fix 98% of these games so that they will work on the newer machines. The fix costs \$2.99 per game plus 50p p&p. Anyone who upgrades now that Amiga Magic is here may find this service of use.

For more information give Andrew a call on 01722 416074.

### IF YOU LIKE THAT SORT OF THING

Vauxhall Motors are the first UK car manufacturer to launch an interactive advert on the Net.

Hailed as "different from the normal 'list-like' websites", the user explores and experiences the *Pronters* through a menu of interactive screen displays featuring sound and video playback.

The ad can be checked out in design terms at <http://www.vauxhall.co.uk>

# New Net Headache For Europe's tax men

**D**espite the proclamations by Net 'freedom fighters' that dissemination of information is the biggest single threat to the autonomy and continuity of oppressive central government, it seems that an army of Net bargain hunters are transcending their more vocal brothers and sisters in the realm of practicality.

Differences which still exist in taxation and import duties across the European Union mean that Net use can put the discerning user in the know about where to go for bargains.

Britain's already regularly raid France for booze, the French trespass on Belgium to buy cars and the

Germans invade Poland for sausage and just about anything else going.

Countries unable to offer lower taxes for whatever reason may find themselves priced out of the consumer market. That this exposure to the real

power of 'market forces' will cause political instability is beyond doubt.

Just what effect this is likely to have in an increasingly paranoid world remains to be seen. Expect it to be a good laugh though.

"There's just one more target to light on the arrest row and we'll be able to bring judgement on a prisoner. If guilty, sentencing is next..."

PINBALL MANIA PAGE 51

# Amiga – The Film Makers Computer of Choice

A radical mix of film and video techniques coupled with innovative use of the power of the Amiga helped American film director Chaim Bianco assemble an award winning and critically acclaimed film.

Entitled the *Pope of Utah*, the film satirises the future of TV

evangelism. So far, the film has won the Best Feature Award at the Chicago Underground Film Festival and the Raindance Festival in London.

The video of the film has been released on the new Screen Edge video label and will be available to buy or rent from the 25th September.

The *Pope of Utah* is a dark comedy, sports a certificate 18 rating, and will cost £12.99.

For more information, telephone 01253 712453 or, alternatively, point your WorldWideWeb server at: <http://www.state51.co.uk/state51/visionary/>

By the time you read this, Amigas will be back in the shops and *Amiga Shopper* reveals exactly what the new Amiga Magic bundle contains.

We also put you in the picture this month with our massive monitors superstore. And then there's our Coverdisks which contain 5MB of excellent programs including the ideal introduction to programming, HiSoft BASIC.

We also have the solution to your storage needs and loads of reviews of new Amiga stuff. Oh, and don't forget the first of Mojo's new 3D tutorials, and then there's DTP, Comms, C and we've revamped the PD section too.

There's so much in it. *Amiga Shopper*, November 1995, on sale now!

Sue Grant,  
Editor

It's a frosty day in Hell when AMIGA POWER gets invited to say something in the bulky pages of *Amiga Format*, so I'd better make the most of it.

Who are you? – We're the mightiest beings who ever created an Amiga games mag. What is your quest? – To battle constantly against the Sinister Global Mega Corporation which manipulates both us and AF, and review games too, of course. Our mandate's similar to the BBC's 'Inform, Entertain and Educate' one, only we use more CAPITAL LETTERS.

What's in this month's issue? – Aha, a full page advert on page 56 explains all. It's got a cool picture of a tough bloke in tight. With a beard.

When's it out? – Right now. Pray you didn't use your last pennies to get AF.

Cam Winstanley  
Editor

## Format Inspires 3D User Group

*Amiga Format* reader Spencer Jarvis was so inspired by the *Imagine* Coverdisk given away with issue 53 that he started an *Imagine* User Group.

The group, formed in January 94, has a couple of dozen members. Spencer contacted us because he would like to see the group grow. It offers a valuable object and attribute finding service, a monthly newsletter and unlimited technical support.

Beside membership of the group, Spencer is also offering an annual competition with prizes and a free disk with a selection of attributes and objects to new members.

In all, the club boasts a collection of over 3,000 objects, 600 attributes, 300 bumpmaps and 60MB of text – all of which are available to club members.

For details of how to join this enthusiastic club, phone Spencer on 0585 102633.

## Info Nexus update

Last month we gave you the excellent demo versions on *InfoNexus 2* and *DataNexus*, but we completely forgot to tell you that *Optonica*

have some great deals on the full versions of this software especially for AF readers.

The special offer price for the *InfoNexus 2* bundle is £24.99, inclusive of postage and packing for UK residents (add £2 for overseas orders). If you are still unconvinced, why don't you read the review on page 100?

Please hurry up and send me a copy of *InfoNexus 2* at the jolly reasonable price of £24.99. I have made my cheque payable to Optonica Ltd. and understand that the postal system isn't perfect, so I may have to wait a bit before it arrives

Name.....

Address.....

Post Code.....

Send your order to:  
*Amiga Format* Office, Optonica, 1 the Terrace, High St., Luttenwoth, Leics. LE17 4BA or order by phone on 01455 558282. Trade enquiries welcome.

"Which of these proves the best for end users is a matter of considerable debate on Usenet at the moment, with the chief consideration seeming to be which of the programmers is the biggest git."

FREE Photogenics LIFE. Freeview software for image manipulation - the 11200/01 24-bit graphics package for A3000 or A9000 includes 27 effects for processing photographs such as Enhance, Saturate, Invertize, Add Noise etc, as well as their True Tone, Check Pixels, Crop, Fill, Flip & more - brilliant! (Packaging is shown for business purposes only and is not included)

## CYBERSTORM

**THE WORLD'S FASTEST... NO QUESTION!**

Up to 1280b of standard SMDs can be installed and you can even transfer the 1280 SMDs from your A4000 straight onto Cyberstorm.

Options include a SCSI-2 only module, or a SCSI-2 and combined Ethernet expansion module. Request your FREE Technical Brochure

### BLIZZARD

**28MHz 68EC020 A1200 TURBO 4Mb, 32-Bit RAM Expandable to 8Mb**

Multi award-winning BLIZZARD 1220/4 4Mb TURBO... Offers by far the best price-performance ratio of any A1200 52-Bit RAM expansion on the market incorporating everything a good memory expansion should - such as a Real Time Clock, RAM expandability, optional FPU etc. And, with its Motorola Processor running the 32-Bit FAST RAM at an amazing 28MHz, the 1220/4 has broken all the barriers! Check the facts for yourself and fit the BEST Amiga 1200 Turbo Memory board.

Request your FREE Technical Brochure

- Integrated 28MHz 68EC020 Clock Speed Doubler for up to 300% overall performance increase
- Factory Installed & Tested 4Mb 52-Bit FAST RAM
- Expandable to 8Mb with Blizzard Add-4 Board
- Integrated Battery Backed Real Time Clock
- Easy Turbopack Installation
- Can be disabled in situ for full games compatibility

**1220/4 Turbo 28MHz 68EC020 4Mb 52-Bit FAST RAM, expandable to 8Mb** **£199\*\***

**Add-4 Board - extra 4Mb for 1220/4 4Mb 52-Bit FAST RAM add-on** **£169\*\***

**THE AWARD WINNING A1200 RAM EXPANSION!**

### BLIZZARD

**50MHz 68030 A1200 TURBO ACCELERATOR - 0Mb Expandable to 128Mb**

**THE highest performing A1200 68030 Accelerator!**  
The NEW 1230-IV is the successor to the market leading 1230-III board. Not only has there been an INCREASE in specification, but at the same time, a DECREASE IN PRICE! With its 50MHz 68030 and MMU, the new 1230-IV offers EVEN MORE for LESS up to 500% performance gain is achieved and options via its Fast Expansion Bus include Modules such as a SCSI-2 Controller, a standard SMD socket provides for up to 1280b auto-configuring 52-Bit FAST RAM (or 256Mb with SCSI-2 option).

- Easy Turbopack Installation
- Battery Backed Self Refresh RT Clock/Calendar
- High performance DMA expansion with full 52-Bit wide DMA
- 68030 may be disabled with a simple keyswitch on boot up allowing full games compatibility - even badly programmed, older software!
- PGA FPU Socket allowing optional 50MHz, 68882 FPU

**1230-IV Turbo 50MHz 68030 & MMU 0Mb 52-Bit FAST RAM, Expandable to 52Mb** **£199\*\***

**SCSI-2 Module\* for 1230-IV Turbo (with additional 1280b SMD socket)** **£89\*\***

**Motorola Maths Co-processors 68882 PGA type FPU, 50MHz** **£79\*\***

**4Mb SMD RAM Expansion 52-Bit, 72 pin (Call for Larger SMD prices)** **£134\*\***

**THE WORLD'S FASTEST A1200 '030 ACCELERATOR!**

Blizzard and Cyber products have led the way for Amiga add-on hardware extending performance for the home and business user alike. They've consistently achieved the highest magazine accolades & awards! Not surprising then, that for the introduction of the World's FIRST series of '060 technology add-on boards available for YOUR Amiga, Blizzard and Cyber are again the name to watch out for!

A new range for A1200/1500/2000/3000 & 4000 Amigas built to become even faster computers!

Unavailable 30th June/95 Available 4th June/95

### BLIZZARD

**50MHz 68060 A1200 TURBO ACCELERATOR - 0Mb Expandable to 64Mb**

**The '060 revolution is here NOW for YOUR A1200!**  
The NEW Blizzard 1260 Accelerator gives you the World's Fastest A1200! With its 50MHz 68060 and MMU, the new 1260 offers unsurpassed performance - 4 to 5 times faster than an Amiga A9000/4000! Options via its Fast Expansion Bus include Modules such as a SCSI-2 Controller, a standard SMD socket provides for up to 640b auto-configuring 52-Bit FAST RAM (or 1280b with optional SCSI-2 option).

- Easy Turbopack Installation
- Battery Backed Self Refresh RT Clock/Calendar
- High performance DMA expansion with full 52-Bit wide DMA
- 68060 may be disabled with a simple keyswitch on boot up allowing full games compatibility - even badly programmed, older software!

**1260 Turbo 50MHz 68060 & MMU 0Mb 52-Bit FAST RAM, Expandable to 64Mb** **£599\*\***

**SCSI-2 Module\* for 1260 Turbo (with additional 1280b SMD socket)** **£99\*\***

**The '060 revolution is here for YOUR A1500/2000 too!**  
The NEW Blizzard 2060 offers the same features/performance as the 1260 in the Amiga 1500 & 2000 range, while allowing up to 1280b RAM.

**2060 Turbo 50MHz 68060 & MMU 0Mb 52-Bit FAST RAM, Expandable to 1280b** **£699\*\***

**PC Task 3.1**  
PC Task 3.1 allows you to run software designed for IBM PCs and compatibles on your Amiga 1+ or 2+ based PC so you can run Windows 3.1 and applications like Microsoft Word and Excel. All for just £59.95! Upgrade from v2 £34.95 - please enclose your PC Task v2 disk. Upgrade from PD version £44.95 - please enclose your disk.

## HOW TO ORDER

When ordering, please don't forget to include the carriage charges! Charges within the UK are £3.50 per item for first class post (which usually arrives the next day). A next-day courier service is available, within the UK mainland and subject to availability, at £6.00 regardless of order size. Please ask for overseas pricing, and pricing for islands & Scottish Highlands.

You can pay by:  
Credit Card: Visa, Mastercard, Access, Delta, Switch and American Express. We only bill your card when we dispatch the order, not before.  
Cheque: Please make cheques payable to Emerald Creative Technology Ltd.

Now open Saturday & Sunday from 12pm to 4pm

# Getting into 3D

Raytracing is probably the most creative pastime you can pursue on your Amiga and here's our own **Graeme Sandiford** to tell you how to get started.

**P**ssst, let me tell you a secret – the film and TV industries are being revolutionised by computer graphics. What, you know already? Well that's not surprising with so many films and TV programs featuring mind-blowing special FX that have only been made possible through use of new computer technology.

In fact, computer graphics technology is now so sophisticated and realistic that it is all but impossible to tell the difference between live action and computer-generated sequences.

Computer graphics have reached the point where if the script-writers and directors dream something up then it can be created by computer and, more importantly, made to look as real or unreal as they want.

Graphics technology has progressed so swiftly that films like *Terminator 2*

and *The Lawnmower Man* that were wooing cinema audiences just a short while ago are being over-shadowed by new productions like *Lawnmower Man 2*, *Job's War*, *Johany Mnemonic*, *Casper The Ghost*, *Virtuosity* and the gut-wrenching *Species*.

One reason for this is the new generation of 3D programs available. However, it isn't just the "big boys" like Industrial Light and Magic (ILM) or Amblin, with their multi-million-dollar rendering farms, that have all the fun – you can grab a piece of the action too.

The next six pages explain the secrets behind stunning 3D graphics, how you can get into it with your Amiga, what programs are out there, what hardware you'll need and even how you can get a job in this exciting industry.

Continued overleaf ➔

This huge 3D image was created using *Imagine's* spline and detail editors. The main object was created with the spline editor and the construction effect was created with the Lattice command.

**S**o what exactly are 3D graphics and why are they so special? Mentioning 3D immediately conjures up images of people wearing multi-coloured glasses or virtual reality headsets. This is because at the moment it is impossible to view images or animations in true 3D on the 2D display of a monitor, TV or cinema screen. So what do we mean by 3D graphics?

The term 3D graphics refers to the creative process rather than viewing the result. A 3D graphics program can best be likened to a miniature universe where the three spatial dimensions (X, Y and Z) are taken into account and

into which can be placed objects – just like the real world. Instead of drawing images as you would on a canvas or in a paint program, you build objects in much the same way as a sculptor or model-maker would, creating a virtual object with height, width and depth.

One advantage of this is that once you've built an object and want to create an animation you don't have to make an object for each changing frame as you would if you were drawing a two-dimensional image. An object can be rotated, moved, sized and altered in many other ways, limited only by the abilities of your software. Just as in the

real world objects can be given different colours and textures so that they can look more realistic.

#### LET THERE BE LIGHT

One of the most important factors to be considered when trying to make a realistic image is lighting. Anybody who has studied art will recognise the Italian word *Chiaroscuro* (light and dark) which describes the relationship between light and shadow – contrast – which can give a picture extra definition, depth and an appearance of solidity.

This is one of the reasons why, even when they are not highly detailed,

## Blow-by-blow

These images show *LightWave* doing what it does best – cinematic effects. The smaller ship moves into the destroyer's line of fire and then – wham! – blows into a million pieces. A lensflare and several null objects make for a spectacular explosion.

images from 3D programs can appear realistic. Most 3D rendering packages actually simulate the way that we see images by emulating the way that light bounces off, is absorbed, or passes through objects.

Especially when lighting is combined with moving objects, the human brain takes in the shifting shadows in an image, which behave in much the same way they would in real-life, and attributes them to the physical laws it takes for granted with the result that it "sees" the objects as being solid.

#### THE STARTING POINT

Right, that's the basics of computer graphics, but of course there is a lot more to it than that. Before you can start rendering your masterpieces or generating award-winning TV programs like *Babylon 5* there are many more concepts and techniques that you'll have to understand and master.

The starting point for any 3D project is building the models because you won't have interesting animations without anything to feature in them. Modelling is the most time-consuming (in terms of human effort) element of a 3D project and many animators see it as a necessary evil and try avoid it—even if it means paying companies like ViewPoint Creative Labs to supply them,

This head, rendered in *Imagine* shows how effective bump maps can be if they are mixed with the right attributes.

Continued overleaf →

## LightWave 3D 3.5

£816 • Premier Vision • 0171 721 7050

Revered by many as the ultimate combination of ease-of-use and power *LightWave* has established itself as the Amiga's premier 3D package. Formerly only available with the NTSC-only Newtek Video Toaster, the stand-alone version of the program has made great inroads in to the European market.

*LightWave*'s biggest selling-point is its very intuitive interface which takes a cinematic approach to animation, with cameras and lighting set ups that will be familiar to anyone involved in video or theatrical work. Even people who have never used a 3D program before can very often find themselves producing quality animations surprisingly quickly.

This is the ideal choice for someone who wants to get into animation at a professional level quickly because it is ideal for creating flying-logs and space animations. However, at the moment it isn't that hot on character-based animation.

Another great help to its success is its use in numerous TV and film productions. This role has proved that the

Amiga is a viable alternative to expensive workstations. Rendered images from *LightWave* tend to be very clean and are typified by good lighting effects and by a great deal of over-kill in the lensflare department too!

*LightWave 3.5* was criticised for not having power tools like inverse kinematics and collision detection built-in. However, several third-party manufacturers are producing add-ons capable of such work. Version 4 is expected soon and should have lots of new features such as inverse kinematics and a plug-in architecture for adding third-party modules.

*LightWave*'s biggest asset is its interface which is incredibly easy to use—as is its animation system.

## Real 3D 3

£399.95 • Activa UK • 0181 402 5770

The arrival of the original *Real 3D* heralded the arrival of a new age for Amiga 3D graphics, enabling the easy creation of complicated objects and realistic surfaces. However, it was overshadowed by *Imagine 2* and now plays second fiddle to *LightWave* despite being more powerful.

The main problem with *Real 3D*, especially version 2, is its complicated interface. This is a shame because this is the most powerful program on the Amiga and it has some truly amazing features.

Version 3 has addressed some of these problems by improving the manual which has made it easier to learn how to use the program.

*Real 3D 3*'s features include the best inverse kinematics of any Amiga 3D program, a large repertoire of primitives, excellent Boolean operators, good spline patch tools, shrink-wrapping which can deform objects with other objects, a powerful particle system and collision detection. In a perfect world it would be ideal to have both *LightWave* and *Real 3D*.

This interface may look over-complicated, but it's the way I like to work, which is one of the good points of *Real 3D*'s interface—its incredible configurability.

especially when a project has a tight deadline.

However, no matter how time-consuming it is modelling is an important factor. As a result, a good range of easy-to-use and powerful modelling tools should be one of the first things you have in mind when purchasing a 3D program.

There are two types of modeller on the Amiga: solid and skin modellers. The difference between them is that skin modellers create objects that are hollow and only have a skin whereas solid modellers create models that are solid.

## THE PRIMITIVES

Another important part of modelling are primitives. No, not individuals with sloping foreheads, rather these are basic building blocks for creating a model. They are simple mathematically-defined shapes that include things such as spheres, cubes, planes, pyramids, polyhedrons and discs.

*Real 3D's superb spline tools make creating shapes like these a piece of cake.*

These are usually the starting point for most models because the best way of modelling is to start with a simple shape and then add more and more detail.

While not very complicated by themselves, or particularly visually inspiring, these simple shapes can be joined together or used to remove pieces of each other to form more complicated objects.

This process of addition or removal is accomplished through Boolean operators. These use Boolean logic to create new shapes from intersecting objects. For example, the And Boolean operator removes all parts of the objects operated on that do not overlap.

The Or operation does the exact opposite and effectively combines objects. One of the best range of Boolean operators can be found in *Real 3D* whose solid modelling techniques are ideally suited to such tools.

There are other ways to create complicated objects from simple shapes. These basic modelling

This is the work of German 3D guru, Tobias Richter, taken from the *Light Works* CD-ROM.

techniques are available in most recent 3D programs and are the most commonly-used methods for modelling. They include functions such as Sweeping, Extruding and Swinging flat objects and profiles.

Extruding objects sounds painful, but it is simply a matter of taking a flat object and moving it along a pre-defined path and having it replicate itself a set number of times. Each of these replicas are joined together so that a new solid object is created. To illustrate this, you could take a circle and extrude it along a path to create a tunnel.

However, the tunnel doesn't have to be straight because it follows the path you set for it which can be curved or even loop back on itself. Most programs also have a function that allows you to scale the object as it moves along a path which can be useful for making seashell shapes or the hull of a ship.

Sweeping and Swinging are similar to Extruding an object. The difference between Sweeping and Extruding is that while Extruding moves a profile or object along a path Sweeping rotates a profile around a path.

A classic example of this is creating a wine glass where you need only draw its profile and then rotate it 360 degrees around a vertical path (or axis), thereby creating a complete glass. Where Sweeping and Swinging differ is that Swinging uses another path to control the scaling of the profile.

However, while useful, these basic modelling techniques are not the only methods used by today's 3D programs. Two power tools are Metaballs and Spline patches. Metaballs is a tool that can be used to create rounded and lumpy objects such as, etc., faces or bodies.

While none of the Amiga's 3D programs have support for Metaballs as such, both *LightWave* and *Real 3D* have tools that perform pretty much the same function - *LightWave* uses a feature called Metaform and *Real 3D* can produce similar effects by creating several balls and then shrink-wrapping a mesh to them.

Spline patches are available in most programs and are created from several curves joined to create a mesh, which is

## A job well done

There is nothing like the feeling you get when you've finished a project. However, you might have to wait quite some time before actually seeing the fruits of your labour, because rendering can be a lengthy process. If you intend to get into 3D seriously you need the patience of a Buddhist monk - or a fast machine.

There is but one rule when considering what Amiga system you need to work in 3D and that's to buy the fastest machine and as much memory as you can afford. As an ideal starting point you should have a machine with an 030 processor, an FPU and at least 6Mb of memory.

If you are thinking of getting into professional 3D work, then you should go for a system with a 32-bit graphics card, an 040 or preferably an 060 processor, 16 to 32Mb of RAM and, at least, a 1Gb hard disk.

The Falcon 040 accelerator from Power Computing can make an A1200 run as fast as a A4000 for under £600.

very smooth and is excellent for creating organic and aerodynamic shapes.

All of these high-quality objects are available on the Imagine Enhancer CD-ROM.

## LIVEN IT UP!

Right, that's modelling out of the way, although I haven't covered NURBS yet [Ed - that's enough modelling, thank you very much!]. After you have finished modelling your objects you may find that they are a little lack-lustre because they will appear plain and not very realistic. This is where texture-mapping can be used to liven up your objects and make them appear more realistic. These are like surfaces - a bit like a wood veneer on a table - they cover the object and give their appearance.

Texture maps come in different flavours, the most commonly known of which is the colour map. This is simply an image which can be wrapped around an object to give it its colour. Using this feature you can give objects a stoney, woodlike, metallic or even reptilian look.

To give objects some texture you can also apply a bump map, also known as an elevation map, to them. This image will be used by the program to add changes to the height of an object's surface - the lighter a pixel is the more raised this area will be and the darker the more recessed it will be.

Although bump maps and colour maps are the type of texture maps most often used there are plenty of others. These include transparency, clipping, luminosity, diffusion and

This image from the Imagine Enhancer CD shows what can be done with rendered and photographic images.

## Imagine 3

£99.95 • Emerald Creative • 0181 715 8866

Imagine has enjoyed a long run as the Amiga's most popular 3D package and evidence of its popularity can be found on the AmiNet where about 80 per cent of the images have been created in Imagine. However, some have found Imagine 3 a little disappointing because its interface hasn't improved very much and many of the new features are a little difficult to use and not very well explained in the manual.

Nonetheless, Imagine 3 has still retained a high level of popularity despite stiff opposition from Real 3D and LightWave. Version 3 has plenty of new features, including a relatively powerful particle system. It also has a

bones feature for deforming objects, limited inverse kinematics and a powerful new tool called States.

One of Imagine's strongest features are its excellent modelling tools that are great for making both precise mechanical objects and organic shapes. There are now three separate modelling editors: the Spline editor for creating smooth text, the Detail editor for general modelling and the Forms editor for creating organic objects.

Imagine is still a force to be reckoned with and should get some extra fire-power with the imminent release of version 3.3 - look out for a review soon.

Imagine 3.0's interface may look dated, but it is still great for building complicated and organic models.

## Vista Pro 3

£27.95 • Emerald Creative • 0181 715 8866

This amazing product has found a home in many a graphic artist's software collection. It's a 3D fractal-landscape generator, but can also load areas of the real world by means of DEM (Digital Elevation Map) files.

Vista Pro enables the user to pick a point on the landscape as a target and another for the viewpoint and then render the view.

The images that can be generated with a little skill and good placing can be extremely beautiful and quite realistic. However, if you are not content with rendering the real world or fractal landscapes, a utility called Terraform is available for creating your own landscapes. Vista Pro also has a program called MakePath for creating animations.

This is a still from an animation created in Virtual Labs' the Vista Pro landscape generator.

Here's Vista Pro in action with a DEM (Digital Elevation Map) of California.

↔ reflectivity. Most of these have obvious functions, aside from clipping maps which clip objects to match their outline.

By combining these mapping methods almost any surface can be mimicked, from the surface of a pond to the festering hide of a repulsive space alien. There are also several methods of applying these textures to objects, such as spherical, tubular, cubic and planar.

However, the most powerful method is spline mapping which bends a texture to the contours of an object and then fixes it there, so that if the object bends, shrinks, crinkles or stretches the texture does the same.

Sometimes, ordinary texture maps do not do a sufficient job. This can be the case when dealing with large objects and camera close-ups when images that have been mapped on to an object can appear pixelated or distorted. The solution is to use procedural textures also known as mathematical or algorithmic textures.

These are textures that are defined mathematically and can be altered by changing a few numerical values. Their advantage is that they can be resized infinitely and remain smooth – no matter how closely you zoom in. However, they have one drawback in that they can incur huge rendering overheads. A good set of procedural

This image shows the importance of lighting. The blue tinge on the bottom of the space station is the result of a light faking the radiosity of the planet's atmosphere.

textures is always a welcome feature and is a strong point of *Imagine 3*.

## STRUT YOUR STUFF

After you've modelled your objects, and made them look pretty by adding texture maps, you get to the fun part – animating them! This is where 3D programs really get to strut their stuff with powerful tools and novel interfaces. In recent years most packages have almost universally accepted key-framing as their main animating system.

This works by the user moving, rotating, scaling or otherwise changing an object in stages and recording that stage as a key-frame. The beauty of this system is that the computer does all the hard work by working out the frames needed to link these key-frames.

However, there are occasions when key-framing is not the ideal solution – when there is a need for objects to interact, or several of them need to move under the influence of an external force.

This is when the big guns come into play and where most of the cutting-edge of 3D technology is. A good

example of this is trying to create a realistic animation of a pool-break. This presents several problems, including having to individually control several balls and making them bounce off the sides of the table and each other in a realistic fashion. The tool you need to do this, without spending hours key-framing, is collision detection.

This method uses the laws of physics to simulate the motions and interactions of each object. A tremendous example of this is *Real 3D 2's* animation system which can apply forces such as gravity, centrifugal force, tangential forces and give an object weight and mass.

Another important factor is trying to make articulated objects, like people and machinery, move in a natural way. In most programs objects move independently so if you build a model of a human and then move one limb the others remain in the same position.

Parenting objects and rotating them can help, but the movements are still not perfect. Yep, you guessed it, there is a way around this too. Inverse kinematics is a technique that makes object "stick" to each other so that as they move they drag objects that are attached with them.

Once again *Real 3D 2* and *3* are blessed in this department, possessing the most powerful inverse kinematics system. *Imagine 3* also has a rather cumbersome system and the belated *LightWave 3* should also feature inverse kinematics.

Sometimes, the sheer volume of objects in a scene can cause problems – imagine trying to create a blizzard or a scene with leaves blowing in the wind. This is where particle systems are indispensable because they enable you to control large numbers of objects at once, usually by defining the forces that affect them. Again *Real 3D 2* and *3* have an excellent system and *LightWave* has an add-on utility, but *Imagine 3* also has a particle system built-in which is one of the major additions to this version.

The final step in any 3D project is rendering the scene you have created.

## Getting into professional 3D work

The Amiga is more than capable of producing professional-quality results in any graphics field. Now is actually a good time to be looking for a career in 3D graphics because there is a chronic shortage of good animators, especially in the games sector. But how do you get in on it?

Well, the first thing you need to do is get a demo reel together – a collection of your best animations on video that can be seen by potential clients or employers. This can then be sent in to games companies or agencies, a great number of whom advertise monthly in our sister magazine, *Edge*.

This example image shows the power of *Real 3D's* texture mapping.

This is the process of making all of the objects appear real by calculating the way they should appear given their settings. Although the most common method is raytracing, where every ray of light is traced from each light source, to the objects and back to your eyes (the camera), nearly every program has its alternative methods.

Many of the programs can also add post effects such as lens flares, glowing surfaces and fog. These are great for generating special FX and can add atmosphere to rendering that can often appear artificially sterile and clean.

However, the most important factor to consider when rendering an image is lighting. Anyone who has seen films like *Blade Runner* and *Black Rain* will appreciate how much a difference good lighting can make to a scene.

This is why most programs have several types of lights, there is ambient light which is the general light of a scene, spot lights and infinite lights which although having a point of source are infinitely far away.

By using these different lighting techniques images can be greatly enhanced. For example, a useful tip is not to have too high a level of ambient lighting because this drowns out the shadows which can make an object appear more solid. You can also point light sources to fake radiance and create shadows to accentuate certain features of objects.

Once you've done all that you can sit back and let the machine get on with the grunt work of turning numbers and vectors into art or mind-blowing action.

This image, by Andy Jones, shows the amazing rendering quality of Real 3D.

The first part of our Real 3D tutorial is overleaf ➔

In this image Tobias Richter pays homage to sci-fi artist Chris Foss.

## Essence and Forge

Volume 1 or 2 £79.95 ♦ Emerald Creative ♦ 0181 715 8866

One of Imagine's greatest assets is an excellent collection of procedural textures called Essence. The two volumes contain a huge number of Imagine attributes and textures covering just about every surface.

The textures can be used to create cratered surfaces, fire, clouds, nebulae, bricks, mechanical surfaces, planet surfaces etc.

The problem has always been that if you didn't have Imagine you couldn't use these textures. With the arrival of Forge all that has changed, because this program can render Essence

textures and attributes as images so they can be used with other programs.

To give you an idea of how your textures will appear when rendered Forge can display them projected on to a plane or sphere and render in these formats too. It can even combine different attributes to create surfaces such as rusty metal or a pitted spacecraft hull.

Forge is not limited to producing single images and can be used to create animations too.

This is truly an indispensable resource for any 3D artist.

Forge and Essence should be in any 3D artist's software collection because they provide access to an enormous range of procedural textures.

## PixelPro 2

£185 ♦ Premier Vision ♦ 0171 721 7050

This is another indispensable program for anybody involved with 3D graphics because it is a 3D object converter. This is especially useful if you need access to a wide range of objects in different file formats, or you prefer to model in one program and render in another.

As well as being able to convert several different 3D objects PixelPro 2 can also convert bitmaps and PostScript files to 3D objects. This is a great feature, especially if you are

doing any 3D work that involves a company's logo - just scan it in and convert it with PixelPro.

Other useful features include an ARexx port, object editing tools and special mode for "painting" the colour of polygons.

PixelPro 2 supports the following file formats: LightWave objects, LightWave scenes, Imagine, Sculpt 3D and 4D, 3D Pro, DXF, 3D Studio, Videoscape and Wavefront.

Pixel 3D Pro 2 is another must-have. It's a converter for different 3D object formats, but it can also convert bitmaps and EPSs to 3D objects.

# Real 3D Tutorial

## PROJECT 1

### Creating a pawn

**1** Press "n" to rename the project. It is a good idea to name as many parts as you can to make it easier to remember how objects and scenes were created.

**2** Create a sphere. You can either use the menu option, or click on the sphere icon in the bottom right of the screen. Click once with the left button to define its centre, then move the mouse and click again.

**6** Set the colour of the pawn. First of all, pick the colour from the colour requester. Remember to make sure the pawn is selected first, otherwise the changes won't take place.

**7** Now click once on the pawn object from the list (when the object is selected, its name will then appear in the centre of the title bar), and then use the Modify/Hierarchy/Color menu option.

**3** Now use the Lathe tool to create the body of the chess piece. Define an axis, then draw the outline. Click on key points with the left button. Press the right mouse button and the outline will be spun around the axis to create the solid shape. Notice how all the necessary objects have been automatically added.

**8** The pawn will now be rendered in this colour – at least until we define a material for it, when we'll have the option of adding any number of texture maps to change its appearance.

## PROJECT 2

### Manipulating groups of objects

**1** Go back to the editor (press "q") and then click on the editor button) and select the pawn object again. Now copy it, by pressing "c" or using Copy from the Modify/Hierarchy menu.

**2** You will see that a new object, Pawn 1, has been created. From the object list, click on the various names to see what our scene contains.

**3** Select the Pawn 1 object and press "m". Now you can drag the new pawn object over to the side.

Have you had a look at the *Real 3D Classic Coverdisk* and flicked through our covermounted book? Then you are ready for **John Kennedy's** series of 3D tutorials.

**4** The pawn piece now consists of two separate levels: the sphere at the top and the body we created with the Lathe. The body itself also contains lots of pieces.

**5** Create a new "root" project. This lets us duplicate the pawn and add other pieces. Building a "hierarchy" of pieces like this makes dealing with lots of elements in one go a lot simpler. Rename the root.

**9** Check to see what the pawn will look like, by moving to the Solid modelling screen (press "q" or use the top right menu option). The default settings will be fine, so click on the Render button.

**10** After a few seconds you will see the rather unexciting image of a pawn. It might look flat and grey; don't worry, we'll soon have it looking a lot better.

## THE OBJECT LIST

The object list contains a list of all the objects which are contained in your scene. The list is based on a "hierarchical" approach, starting with a root and branching out. For example, the root could be the entire scene of a chess set and board.

Under the root would be the board object and the pieces object. Under the pieces object would be white pieces and black pieces. This continues all the way down to the simplest solid objects that an individual model is made from.

The idea behind this upside-down tree structure is that it makes manipulating large numbers of objects a lot easier. For example, if you create an object which contains all the chess pieces, you can change the colour of every single piece in one go simply by altering the colour of the top object.

Manipulating the list is easy once you get the hang of it. The object at the top in a different colour is the current object. If you click on it, you move back up the tree until, eventually, you reach the root object and cannot go back any further.

If you click once on a name under the top object, you will select it (its name appears at the top of the screen). If the object you selected contains more objects under it, then these will be displayed. Your selected object becomes the top object in the list. It sounds complicated, but it only takes a little practice to get the hang of it.

## RENDERING

The test renders we created with the default settings looked bland and flat because no lights were used, or shadows created.

Fast - no textures, one light from the camera's position.

Lampless - textures are rendered, but one light from the camera's position.

Shadowless - textures are rendered and additional lights added to the scene are used for lighting.

Normal - As Shadowless, except objects will cast shadows.

Outline - Best used for special effects.

**4** Continue this until you have eight pawns, all in a row. You will need to "zoom out" of the display by pressing the minus key in order to fit them all on to the screen.

**5** Now go to the Wireframe view (press "w") to see all your pawns. Move the small box in the frame to change your viewpoint and watch as the pawns appear to rotate. You can also zoom in and out. When you have found a good viewpoint, click on "REC" and then move to the solid screen by pressing "q".

Continued overleaf ➡

**6** Render the new image to see your line of pawns. Once again they will appear rather dull-looking and decidedly un-interesting, but if you want to make them more interesting, have a look at the box entitled Materials on the facing page, as this goes into detail about creating new materials.

The difference between a good final image and a terrible one is almost always the materials, so it's worth investing some time into seeing how the different attributes work.

Now return to the editor window again (choose exit from the render window and click on the "Editor" gadget, or just press "e").

**7** Next we will change the name of the current root level to WhitePawns. To do this we must first make sure that the current root is selected, by clicking on it in the hierarchy window. Now choose "Modify/Rename" from the menu and type in the name "WhitePawns" or whatever name you find easiest to remember.

Create another root object by selecting Projects/Create/Create Root. Call this one ChessSet as it will contain the complete set of pieces. Now we should have a new root project which contains the object ChessSet, which itself contains all the white pawns.

**8** Select the WhitePawns object and copy it, using the Modify/Hierarchy/Copy menu - you'll note that this will copy all the pawns, not just one. Then rename this copy to "BlackPawns".

Select this object again and move it further up the screen as shown in this screen. All the pawns contained in this object will be moved too - you can begin to see the power and potential of Real 3D's unique hierarchical object system.

Use the "Pan" option to help you move around the screen: position the cursor where you want the screen to be centred around and then press the full stop key.

## PROJECT 3

# More complicated object manipu

**1** Save the work you have done so far - you should be doing this regularly to avoid losing your hard work. To do so you must first make sure that the top root object is selected, or only the selected object will be saved, and then pick "Objects/Save" from the project menu.

**2** Now that our work is safe and sound, we can get started on the next project. Delete the current project, by pressing "D" or by selecting Modify/Delete, and then create a new root object called "Bishop". Now we can start with a blank screen.

**3** Next, create a sphere primitive - just as we did for the pawn object. Now select "Stretch" from the Modify/Hierarchy menu and then click once in the centre of the sphere, without holding the button. Now, move the mouse downward to create an ellipse and click again.

**5** Chess Bishops traditionally have a slot cut in the top. We can use the special "Boolean Algebra" functions of Real 3D to get the same effect. The Boolean tools are very useful for combining simple objects to make more complicated ones.

**6** OK, now create the box that we are going to use to cut out the slot with a Boolean operation. Make sure it is the right size (you don't want to cut too much out, or your finished object will look like the dog's been at it).

**7** Now move it so that it overlaps the elongated sphere. You will want to use the Rotate function (or the "a" shortcut) to angle it slightly. You can check the exact angle from the readout in the top right of the screen.

**9** Select a new colour, preferably a dark one of course, and then apply this to the BlackPawns group of objects. Remember, thanks to Real 3D's hierarchical system, which works just as well on textures as it does on objects, you will not need to colour each object individually; simply alter the top object in the hierarchy.

The same is true of materials. You can quite easily create a marble or metallic set of chess pieces just by selecting the parent object of all the white pieces and changing its material type.

Right, now it's time to render all of your freshly-created objects.

## HERE'S HOW:

- Make sure the box and blob have been named properly.
  - Select the box. This is the "tool" we are going to use to cut the blob.
  - Select the AND NOT from the menu
  - Select the blob
  - Click on a view window to confirm the operation.
- Nothing seems to have changed. However, select the box and delete it. Then press "I" or use the Extras/Representation/Rethink menu. You will see that something has changed and when you are rendering the image in solid form you will see that the wedge has been sliced from the blob.

## lation

**4** The top of the Bishop in a real chess set is not quite an exact sphere. It's more a sort of squashed ball shape. It is possible to re-shape your primitive very easily by simply pressing the "g" key, or Modify/Hierarchical/Stretch, and dragging it into the shape required.

**8** Now the fun starts. We need to use the function AND NOT to cut the box-shaped slice out of the blob shape. Select the box, then the AND NOT function and finally choose the sphere. You can now delete the box shape; you don't need it anymore (although you'll see that its outline is now attached to the blob).

## THE THREE VIEWS

The main editor display of Real 3D contains three object views, a list and a set of icons. The three views display the objects you are working on from three different view points.

- From the front
- From the side
- From the top

The object is to show as a two dimensional outline in each view, which allows you to accurately position and manipulate the objects in space.

## MATERIALS

Each object can have a colour assigned to it, but the colours are really only for identification purposes whilst you are editing and performing text renders. Much more control is possible by creating and assigning a different material for each object.

Several materials are supplied as standard and these can be loaded in from the Project/Materials/Load menu. You can then examine each one in detail using the Modify option. You will see that some materials are quite simple and only affect how reflective or transparent an object will appear. Others are complicated and use an external graphics file.

A texture is a pattern which will be wrapped around an object. For example, a chequered texture was used on the chess board.

A bumpmap is another pattern, but one in which the intensity of the colours are used to

indicate a height of the object. For example, if you use a bumpmap which contains a letter, the object will appear to have the letter embossed on it.

When combined, textures and bumpmaps can be used to give some very realistic results.

# It's Back...

Like a phoenix rising from the ashes, the Amiga emerges - reborn under the Escmon banner. HiSoft has been there all along, crafting the best products for the best home computer and we have many more exciting titles waiting in the wings... trust HiSoft for brilliant packages, keen prices and excellent service.

**£189**  
£239 inc  
Squirrel SCSI

A brand-new SCSI peripheral, the Zip™ may well revolutionise the storage industry.

This newest, most portable exchangeable hard disk drive weighs in at just 1lb, has fast transfer and access times (up to 1MVs transfer, 28ms seek), easily fits in your hand, your bag or your briefcase, stores up to 100mb on floppy-sized disks, is perfect for all types of application and is priced at a level that will make you want to unzip your wallet immediately!

Price inc 100Mb cartridge, extra 100Mb cartridges £15.95 each

Order your Zip drive now to avoid disappointment!

Zip drives from HiSoft include everything you need to get going on a SCSI-aware Amiga: the Zip 100 drive, a 100Mb cartridge, all necessary leads and a complete set of software, programmed by HiSoft, including:

- Easy access drivers
- Temporary unprotected
- Password protect
- Cartridge initialisation
- Write protection
- Cartridge eject

## The Best-Value Hard Drives

If you want a SCSI hard drive then HiSoft has the one to suit your needs: whether you are looking for an internal drive for your tower case, A3000/A4000 etc or an external 1Gb beast-of-a-drive for your Amiga-aware Amiga, we can supply.

Based on only the highest quality mechanisms from top suppliers, with full manufacturer's warranty, our hard drives are fully tested for all Amiga computers and come with our own additional warranty and technical support.

### SCSI Hard Drives

- 420Mb internal £179 580Mb internal £249
- 420Mb external £214 580Mb external £299
- 730Mb internal £239 1Gb internal £349
- 730Mb external £259 1Gb external £419

**1GB**  
Internal  
**£349**  
£419 external

**Quad-Speed**  
CD-ROM  
**£239**  
£199 external

We offer internal or external SCSI hard drives with CD-ROM drive optional. Internal drives are suitable for installing in the A3000, A2000, A5000 and A4000. All drives will meet necessary leads & cables whilst the external drive is supplied in our professional scanner cases (available separately) which include integral power all SCSI connections and a convenient handle of your choice. (See trial extra cost)

only  
**£225**

## Super-Value CD-ROM Pack

HiSoft has done it again with a brilliant multimedia pack of Squirrel™ SCSI interface, Alima™ SCSI CD-ROM and the Alimacore 10-on-10 pack of CD's! Just look at what you get:

- The amazing, trend-setting Squirrel SCSI interface which runs up to 7 megabytes (hard disk) CD-ROM, Zip, scanner etc. in a fully-featured package.
- The Alimacore 10-on-10 pack of CD's: this is 10 CDs including 10 from Tolkien game, 2000 city images, the Maelstrom of Shogun, 2000s, Internet & Network, 1000 The World Wide Web, 1000s of names, a complete photo library and much, much more!

Best chance to buy the Super-Value CD-ROM pack - offer ends 31 October 1995

## Disk Magic

**£39.95**

Newly released, Disk Magic (screenshot on the left), is the ultimate file and disk management utility for your Amiga. DiskMAGIC makes every task you perform - from the copying of a file, to the extraction of an archived file, as simple as a clicking on a button! In fact using DiskMAGIC, you'll wonder how you ever used your Amiga without it!

DiskMAGIC is exceptionally configurable, with the ability to alter window layout, file types, action buttons, screen mode, archive handling, viewers and more. DiskMAGIC is compatible with all Amigas running W1 (or higher) and with 1.5MB or more of free memory.

## Twist 2 Database

**£99.95**

Twist 2 is the highly-acclaimed relational database for all WB2 Amigas (2Mb memory recommended). With built-in Forms Designer, a beautiful user interface, simple-to-use relations, versatile sorting, reporting and searching features and speed that defies belief, Twist 2 is the only Amiga database that will grow with you.

Twist 2 is compatible with all Amiga running WB2 (or higher) and with 2Mb, or more, of free RAM. A hard disk is recommended.

As music experts all sampler products are our own design, built and programmed in the UK, you can trust HiSoft to deliver the right package for you: a professional Midi interface (ProMidi £24.95), a great-value, 8-bit direct-to-disk sampler (Megalosound £24.95) or a superb quality 12-bit direct-to-disk PCM/A unit (Aura), both samplers have superb real-time effects.

**£99.95**

## Termite

**£39.95**

Afraid of becoming a hedgehog on the Information Super Highway? Don't worry! Termite is so easy to use that even a first-time telecommunicator will feel at home.

Termite is 100% WB2 Style Guide compliant and provi- you with all of the modern user interface features to really enjoy playing in the highway!

Termite supports both the Amiga XPR and XEM libraries as well as having its own internal ZModel. Termite is compatible with all Amigas running WB2 (or higher) v 1MB or more of free memory and all models.

## Cinema4D

**£199.95**

An exciting new package, due for release in September at the amazingly low price of only £199.95, Cinema4D is set to revolutionise the 3D-rendering and animation market. Cinema4D provides an easy-to-use multi-tasking editor, replete with every conceivable option including multi-window editing, interactive modelling, direct modelling in 3D, basic and complex primitives, easy object manipulation, hierarchies, an optimised FPU/CPU version and much more!

Cinema4D also includes a comprehensive file conversion utility to allow full import of your current objects.

## Order Hotline

**0500 223660**

To order any of the products shown on this page (or any other HiSoft title) - just call us, free of charge, on **0500 223660**, armed with your credit or debit card; we will normally despatch within 4 working days (64 P&P) or, for only £6 within the UK, by guaranteed next day delivery (for goods in stock). Alternatively, you can send us a cheque or postal orders, made out to HiSoft. All prices include VAT. Export orders please call or fax to confirm pricing and postage costs.

© 1995 HiSoft, E&OE.

All prices include UK VAT at 17.5%

Hello, and welcome to the second part of *Amiga Format's* "Enhanced Gaming" special. Last issue Steve McGill had a bit of a rant about some things that games could do to make themselves a bit more, well, *special*. This month we're going to be talking (well, I, **Stuart Campbell**, am anyway) about some of the games that already have. Join us on our amazing adventure into...

# The Enhanced World

**A**s Steve McGill said last month, the world is Bill The Computer Game's lobster when it comes to finding inspiration. There are at least a dozen simple ways in which games can be made more of an experience and a joy to behold, and I'm going to point out, er, (hang on a minute), nine of them over the next three pages.

## THE CLATTER OF TINY KEYS

Players control games in so many different ways. Some like joysticks, and hold them in both hands pressing fire buttons with thumbs and trigger fingers. Other stick fans like to fix the stick to the desk or table and hit fire with forefingers, arcade style.

Then you've got your joypad fans, divided into thumbsters (again) and those weirdos who prefer to use the pad piano-style, using forefingers for both the fire buttons and the movement pad. Yep, so many players, so many styles. It must be a nightmare for game programmers trying to make all those styles work comfortably. My heart goes out to them.

Except it doesn't. I hate programmers. Want to know why? Well, I, like many thousands of Amiga owners, used to have a ZX Spectrum. On the Spectrum, joystick ports didn't come as standard, so all games had to have keyboard control options. It was truly brilliant.

After a while, user-defined keys became the norm, so you could set a game up any way you liked, never again dying because some idiot had decided to use 'up' to jump, or put the smart

bomb control in the middle of the keyboard where you could never hit it in time. (But if you liked it that way, you could still have it that way).

Also, using keys gives you more precise and accurate control 99 times out of a hundred – why don't you try playing *Rainbow Islands* both ways if you don't believe me.

So why is it that 99 Amiga games out of a hundred don't have any keyboard option at all? Imagine playing driving games in perfect comfort. Millimetre-perfect jumping in platformers. As many fire buttons as you need in complicated beat-'em-ups.

But no. "Use that wobbly old 1-button joystick", insist the nation's coders. Cretins!

So it's a big hats off to *Super Stardust* from those cheeky little monkeys at

Team 17, the only Amiga game I can think of off the top of my head that offers choosable keyboard controls.

*Asteroids*, especially, was a game that was never ever meant to be played with a joystick (even the coin-op used buttons), so 500 common sense points go immediately to whoever decided that one of the improvements from the original *Stardust* to the AGA version should be the addition of keyboard control and a hearty slap in the face goes to everyone else.

## EVERYBODY NEEDS GOOD NEIGHBOURS

And there's one other kind of control cleverness we haven't covered yet – the innovative two-player mode. Two-player games themselves are ten a penny, but there are a select few where two players

**Continued overleaf →**

← play not to compete with each other, but to work together towards a common goal in a spirit of friendliness and co-operation. Wimps!

But seriously though, helping each other out can be fun. Virocop and Blasteroids both feature variations on the same theme, where one player drives the ship and the other swings the turret and shoots the bad guys, although Blasteroids is the more interesting in that the two players can join up or split apart and hunt separately at any time.

The magnificent shoot-'em-up *Apidyia* also has a cute two-player game, where Player One takes control of the mighty armoured war itself, while Player Two controls the less-powerful, but invincible drone that flies by its side.

Finally, top coin-op conversion *Pang* has a two-player mode that's neither strictly co-operative or competitive. Here, the two players share common lives and, if one dies, both players are sent back to the beginning of the current screen.

This is so infuriating (and so wonderfully open to cunning deliberate sabotage) that it's a tragic shame no-one else has tried using it since.

## MOB! HUT!!

There's more than one way to be more interesting than the old-fashioned two-player mode, however. Instead of using your two players in a new or exciting way, why not have more than two players at a time?

Why not three? (Brilliant abstract future sports game *Projectyle*, or shallow-but-fun, dinosaur-based destruct-'em-up *Rampage*). Or four? (Arcade classic *Gauntlet 2*, or fascinating action maze wargame *Bug Blaster*).

Or even five? (The indisputable master of multi-player video games, *Dynablasters*. Even the much-hyped console versions of this under the rather snappier *Bomber Man* moniker could only manage four players at a time. But if you could crowd one more person round your Amiga monitor, up to five of you could blow each other up with cute little cartoon high-explosive devices).

**SUPER STARDUST:** A slap in the face to those developing games without keyboard controls.

**VIROCOPI:** Why fight your friend when you can help them out, asks a pseudo hippy?

Sadly, the 3DO console was first to the idea of daisy-chainable (and hence theoretically limitless) joypads, but at the moment the Amiga can cope with more of your friends than practically any other games platform in the world.

Aren't you proud? (And for the ultimate in multi-player capers, why not sneak a peek at No.9?)

## Budget-priced special editions have come to the rescue of more than one game in the past.

### YOU'RE SO ("VERY") SPECIAL

What's that, Mister Publisher? Too late? Released your game with crap controls? Bumpy difficulty curve? Obvious

**APIDYIA:** Some of the most successful airmen in the world owed their luck to wingmen.

missing bits? Embarrassing bugs? Well, it happens to the best of us sometimes.

But it's never too late - why not release another version of it, a 'remix' if you will, adding a few tweaks here and there, maybe the odd new bit and some general tidying up. Budget-priced special editions have come to the rescue of more than one game in the past, and yet again we have to tip our tiffers in the general directions of those innovative Wakefield boys, Team 17.

*Alien Breed*, *Assassin*, *Body Blows* and *Project X* have all benefited from a second (or third, even) stab, especially the last-named of the above. The first

**BUG BLASTER:** When two players aren't enough, give four a go.

**PROJECTYLE:** If you've never taken part in a threesome, seek out Projectyle.

## I'M (NOT) A CONTROL FREAK

The next-best thing to redefinable keyboard controls is to at least have some kind of other control options. These are almost as rare as keyboard-controlled games, but chapeau removal is once again the order of the day up Yorkshire way as Team 17 atone slightly for the otherwise dismal *Overdrive* by allowing you to drive your little cars by either the "rotate-and-accelerate" method, or the less traditional "up-down-left-right" routine.

Also, the only saving grace of Jeff Minter's useless conversions of *Defender* and *StarGate* for Arc was that you could ignore Jeff's repulsive mouse-control pet ideas and play the old-fashioned way that worked so very well for the coin-op games in the first place.

**OVERDRIVE:** Didn't let the player redefine keys, but it did give them a choice of how to control the car.

*Project X* was ridiculously, unfairly hard and riddled with badly thought-out control features. The updated release was still a tough shoot-'em-up, but in a hugely less annoying way.

If only more publishers were prepared to admit their mistakes in such a public way, how happy we game players would be, eh folks? Kudos is also due to Titus, who improved their corks *Crazy Cars 3* in the only way it could have been improved, with the addition of a 2-player mode for the licensed update *Lamborghini American Challenge*. But still nobody bought it. Tch.

## BUILD A PLACE WHERE WE CAN PLAY

Following on neatly from the data disk is the construction kit. This is real customer care and as such is rarer than hen's teeth (Does anyone know where this saying comes from? Has anyone ever seen a hen's tooth? Do all hens have them, or just spookily genetically mutated ones? How rare are they, exactly?) in a "New! Improved! More Expensive!" world like this one.

So, extra-special respect to the authors of *Spindizzy Worlds*, *Fears*, *Gloom*, *Gravity Force 2*, *Lode Runner* and *Boulder Dash*, who cut off their own chances of lucrative sequel larks by including the means for the player of their games to build their own levels to their own designs, for ever.

*Spindizzy Worlds* seems to have done so almost by accident, for the level designer is only accessible via a secret cheat mode and you have to work out the instructions by yourself.

Rainbow Arts' marble-rolling puzzler *Logical* also gave you a construction kit only accessible by secret password, this time obtained by completing all of the game's 100 set levels, a great idea only spoiled by the fact that you were unlikely to want to play 100 levels of *Logical* in the first place, let alone devise your own extra ones afterwards.

Continued overleaf →

**ALIEN BREED:** Several incarnations have continually evolved this classic of gameplay and violence.

**ASSASSIN:** Team 17 reckon that listening to user feedback pays dividends. They're right.

**LOGICAL:** Completion of the game's 100 levels gave you access to a construction kit. Nice idea.

**SPINDIZZY:** The addition of a construction was quite possibly an accident. But who cares, eh?

**SIM CITY:** Most of the games with construction kits are modern. This is probably due to the fact that gamers are more demanding in terms of value for money.

ASCON

# The dream starts here...

Lotus 3 had a sort-of track designer in the RECS system, whereby you could design custom tracks to vague general specifications rather than planting bends just where you wanted them.

The *Sim City* Terrain Editor lets you fiddle around with dirt and water in an almost-but-not-quite-entirely-ineffectual way (*Sim City* also came with a whole clutch of data disks featuring new graphics, preset scenarios and suchlike, incidentally).

But it's perhaps a sign of the times that most games with construction kits included are among the most recent releases. Perhaps those friendly software publishers know something we don't, eh?

### COME AND HAVE A GO IF YOU THINK YOU'RE HARD(WARE) ENOUGH

The toughest, but potentially most rewarding way to make more of your Amiga games, though, is to call on the help of some extra hardware.

Simply running many older games on a standard A1200 can make a huge difference (check out *F1 Grand Prix*, or *Knights Of The Sky*, or almost any other aged flight sim), but if you've got an accelerated machine, or an A4000, then the world can be your texture-mapped, Gouraud-shaded, multi-polygoned oyster. Unsure? Ten seconds on *TPX*, or *Gloom*, or *Fears* should see you raid that piggy-bank very sharply.

Other games (like ace, frenetic blaster, *Uridium 2*) will at least notice if you've bothered to buy additional RAM and load in extra animations and

**GLOOM:** Makes use of an accelerator so that it zips along.

**FEARS:** A sign of the goodies and games to come with extended use of the AGA chipset.

sound effects. Or for the ultimate *FIGP* thrills, why not invest in an A1200, a Quickjoy Footpedal controller and a steering wheel?

The very best, though, I've saved for last. If you're lucky enough to have access to two A1200s, two monitors, one null modem cable and seven friends, then why not go the last mile and get yourself a couple of copies of *Super Skidmarks*? Playing this fab racing game with eight players and a widescreen picture stretching across two screens is the best time you'll ever have within touching distance of an Amiga. Anyone

**Even the most everyday game can enter a whole new world of enhancement excitement.**

**F1GP:** Great on an A500, but on an A1200 it really flies and transforms its gameplay.

for a one-player game of *Daytona USA*? Thought not.

### NO MORE EXCUSES

So there you have it. Just some of the easy-peasy ways in which even the most everyday game can enter a whole new world of enhancement excitement.

Let's hear no more excuses for the dull and workmanlike – the Amiga might have been under siege, but there's no reason why it can't make a comeback in style, with all guns blazing.

More games should be like *Super Skidmarks*, making gameplay more of an experience, and maybe real game-lovers won't be in quite such a rush to flock to the 'new' generation of machines. Or at least, if they do, they'll know just what they're giving up.

## I have no data on that, Captain

Closely related to the Special Edition is the data disk. A way of extending the life of a game, adding things to it that it should have had in the first place, or just doing something a little bit different and out of the ordinary with it, the data disk has been a much under-used device in the computer games industry, a world where 'after-sales service' is a dirty word. Or two. Maybe three.

Anyway. Even where it has appeared, quality has been wildly variable. Oh *No More Lemmings* was a rush job, a shoddily-planned paste-on of all the levels that were too dull or

too irritating to make it into the game in the first place, but at least it was another fix for out-of-control Lemmings addicts. Similarly, *Populous Challenge Games* and *Their Finest Missions* gave you nothing you couldn't really have done for yourself with the original game and a bit of thought.

*Utopia* and *The Humans* fared rather better with a couple of decent sets of new levels, although neither showed any great imagination, but it was a pair of football games which really showed the potential of the medium.

*Kick Off Extra Time* (brrrr) and *Sensible Soccer 1.1* took slightly different approaches to the idea, but both were worthwhile additions to their parent games, adding new and improved features at relatively little cost (compare the £3.95 for the *Sensible* upgrade, which also gave you your original disks back for the purists, with the £19.95 charged by *Pygnosis* to gullible Lems fans).

Again, most publishers would rather try to sell you a sequel than admit any inadequacies in their original games, but this kind of thing really ought to happen more often.

**LEMMINGS:** Whether it was an addict fix or not, Oh *No More Lemmings* was good service for gamers.

**HUMANS:** Extra levels of favourite games represent good after-sales service. A service mostly neglected.

**SENSIBLE SOCCER:** The 1.1 version was pretty much in keeping with what happened with *SWOS* v1.0.

## You can't hide your love forever

**LOTUS 2:** Gremlin could be called the patrons of the hidden game. Lotus 2 hid a game called Dux within its motor rolling code.

But it's not just construction kits some games keep up their sleeves. Some games conceal entire new, different games that are just a password or a sneaky trick away.

The Lotus games come up trumps here again, with number one featuring a little asteroid-blaster called *Rox*, Lotus 2 hiding *Dux* (a conversion of likable arcade-zapper *Carnival*).

While my memory could be playing tricks on me here, I'm sure the third one had a tremendous Gridrunner-style shoot-'em-up called *Pod* lurking in its depths.

Gremlin (the publishers of the Lotus trilogy) are the patrons of the hidden game - in fact, the biggest hidden game of all was a neat platformer called *Chrome*, buried inside (oh crikey, now you're asking) either *Venus The Flytrap* or *Switchblade 2*.

But there's another honourable mention to our friendly old chums at Team 17, who put a version of the venerable Pong into the first *Alien Breed*, as well as one to Pygnosis who devoted more

space to hidden bonus games in cutesy platformer *Wiz'n'Liz* than they did to the game itself.

Other authors haven't even tried to hide their lights under a bushel - the original C64 *Impossible Mission* is selectable as an option at the start of MicroProse's inferior follow-up *Impossible Mission 2025*.

And the Amiga version of Speccy classic *Manic Miner* was also rather less fun than the pixel-perfect, 8-bit version supplied on the same disk.

But the saddest loss of all is suffered at the hands of Sensible Software, whose gorgeous and under-rated *Wizkid* boasted a brilliant Asteroids clone called *Wizeroids*, but failed to include (as far as I know) any way of getting to it other than playing the game through to the very end. Bah!

**MANIC MINER:** Not as enjoyable as the included 8-bit version

**WIZKID:** An underrated game which featured a hidden Asteroids clone called *Wizeroids*. Those wacky Sensible lads, eh. Don'tcha just lov'em?

## POLE-POSITION FORMULA 1 TEAM MANAGER

B176... (2 Disks) Aquatic ALC... (2 Disks) Best spreadsheet available  
B232... Check Book Account... Keep tabs on your expenditure  
B240... Little Office... Word Processor, Database & Spreadsheet  
B233... Inform... Invoice maker  
B330... EasyCalc... Excellent spreadsheet

## CREATIVE + GRAPHICS

- C130... Label Designer... Various label printers  
C197... Clip-art... Stars/Logos/Emblems etc  
C198... Clip-art... Valentines and wedding  
C201... Clip-art... Sport  
C206... ABC Adventure Creator (N)... Create your own adventure games  
C211... Audio Animation Studio... Create Cartoons  
C236... Word Power... Solve crosswords & anagrams  
C238... Font-Font... Multiple of printing fonts  
C256... Print studio... Multiple purpose printer utility  
C258... Graphic designer... Create your own garden excellent graphics  
C268... League Database... Easy-to-use football editor  
C322... Lion King (2 disks)... Good Disney clip art  
C331... Signature Creator... Customise your signature

## MISCELLANEOUS UTILITIES

- M176... SuperTools... Disk copier  
M200... Sudden Impact... Disk magazine Good & informative  
M210... Pinpoint Version 2... Work out your winnings  
M241... Wheelmaker... Database for wine lovers  
M242... Lockup 12.0... Uncover copy facilities  
M245... Roto Key V1... Latest D Grabber for A1200  
M249... Easy Split... Split checker/healer

- M282... Essential Virus Killers... Kills all the latest viruses  
M299... Test to Green... Excellent golf-scorer  
M310... Personality Analysis... Type in answers to assess yourself  
M311... Copy the Lot Pro... Updated better helper  
M332... Virus Checker V6.5... New updated killer  
M333... Disk Repair Kit... Salvages damaged disks

## DEMOS + RAVE

- D075... Girls of sport... Pretty shots of talented girls  
D106... Madonna... Pictures and music  
D166... Star Trek Animations... Anim. of USS Enterprise  
D177... Star Trek Animations... Astron no 17 more like above, Good  
D287... Calendar Girls... Sideshow  
D312... Rave Vision... Rave music & Graphics  
D414... Nine Fingers (2 disks)... Good. Sequel to State of Art  
D318... Jupyter Impact... Real pictures of people's collection

## MUSIC

- M384... Pink Floyd... The Wall remi  
M393... MC Hammer... Can't touch this  
M384... Guns N' Roses... Pictures & Music  
M392... Wyllied... Saturday Night mix  
U244... Sound Tracker Samples (4 Disks)... 100's of sounds for sampling

## ADVENTURE GAMES

- A005... All New Star Trek (2 drives, 2 disks) USS Enterprise classic. Best one  
A007... Star Trek (2 drives, 2 disks) (N)... Graphic adventure  
A014... Adventure Solutions (2 disks)... Load of fun  
A019... Dungeon Delver (2 disks)... Difficult adventure quest  
A065... Pike Kingdom (2 disks)... Bring your adventure game.  
A022... Neighbourhood Adventure... (2 disks) Trick Paul Robinson to court  
A045... Iron Castles (2 disks)... Epic adventure  
A036... Wildlife World Guide... Really good platform game  
A421... Galeshock II... Very good platform game  
A550... The Devils Abode... 3D Horror Adventure

## ARCADE + PLATFORM

- A010... Breakout... Classic bar & ball game  
A011... Skizout... Horizontal shoot-'em-up. High quality  
A024... Eat Mine (N)... Emerald Mine Ballooshen game  
A050... Master of the Town (N)... Destroy town with mouse  
A074... Snakepit... Eat the food to survive!  
A105... Super Skeds... Car racing game  
A181... Quick in Silver (N)... Platform. Similar to New Zealand Story  
A207... Plagatchar... Find the flag. Very addictive  
A209... Games Galore Ten (N)... 14 excellent games  
A214... Parachute Jump... Fight for parachute on descent. V. good  
A221... Revenge of Mutant Camels... Good. Similar to Centipede  
A208... Dual... 2 player action shoot-'em-up  
A243... Telen... Excellent Tetris clone  
A247... Quiz Master... Quiz which includes Editor  
A255... Amos Games... 5 disks including Baseball  
A257... Tetris Plus... Tetris game with exceptional variants  
A333... Joanneur (N)... Recom. Brilliant platform game. 16 out of 10  
A338... Project Bust Bar... Excellent asteroid type game  
A400... Death Charge... Submarine game  
A341... Earth Invader... The best space invader game  
A403... Assassins 218... Bomber 2000. Black down  
A404... Assassins 217... Mangled Fingers, Maze and Cubik  
A433... Harry Haddock... Really good platform adventure  
A434... Arma Boy... Console games as Amiga!  
A443... Nimble... New. Addictive graphical platformer  
A501... Internal Combustion... Car racing game  
A502... Cybernet... 3D Pacman game  
A503... Changelogs (2 disks)... Like Lemmings. Good  
A504... Rebellion... Asteroids shoot-'em-up

## STRATEGY + WAR GAMES

- S013... Bullwink (N)... American old war game  
S071... Return to Earth (1 meg)... Space adventure  
S102... Simulation 1 (1 meg)... Recommended. 5 games including Mite  
S109... Wheel of Fortune... TV Quiz computerised  
S124... Napoleonic Warfare... High quality simulation  
S139... Battle of Britain... Defend the nation  
S143... Cart Shop... Well presented card games  
S217... Act of War... Excellent strategy game  
S218... Russian... Casino Classic  
S220... Sub Act (N)... Also landmine + bomber  
S224... Strategic Games... 3 excellent games  
S240... Diplomacy (N)... Excellent board-game. Buddies & mystery  
S241... Diplomacy (N)... Classic. Similar to Risk  
S245... War (N)... Top-quality 8-bit strategy  
S248... Total War (N)... Risk type game  
S249... The Shepherd... Populous clone  
S341... Rags to Riches... Become a millionaire  
S444... Unlimited Quiz... Pub-quiz game  
S505... Scrabble... Board-game computerised

## SPORT

- Sg170... Amos Cricket... Overall  
Sg208... Grand Prix Simulator... Simulation  
Sg294... Soccer... Management game of US football. Top Sport  
Sg293... Soccer Cards... Simulated league table manager  
Sg299... Top Of The League... Addictive football management game  
Sg303... Shrek... Baseball-type action game  
Sg307... 18th Hole (2 disks)... Excellent golfing game  
Sg325... Master Men Olympics (2 disks) Excellent game for disks as reviewed  
Sg337... Super League Manager 2... Updated soccer management game  
Sg372... Road To Hell... Well-produced game  
Sg373... Wrestling (2 disks, WB2.0 upwards)... Good fun graphics  
Sg376... Unlimited Soccer... Good football game  
S429... A Day at the Races... Simple horse racing game

## A1200/A4000 ONLY

- U235... Sleepless Nights... Compilation of 1200 utilities  
U246... Magic Winch... Excellent Win improvement for A1000  
U321... Chemical... Chess test & pictures  
U324... Lottery Winner AGA... Helps you to win!  
U334... AGA Killers... Updated virus killer  
U355... Videobuster 2... AGA demo-creator  
U385... Fairlight... 29 meg of graphics on one disk  
U386... State Of Art... Famous quality demo  
U390... Raving Mad Me... High quality music video  
U391... Lethal Cl... Stunning demo  
U392... Technodisk II... More rave music  
U393... Refina... Excellent Vector film demo  
U395... Tiny Small... Sideshow of models  
U396... AGA Marsall... Nipar Marsall slides  
U399... Minotaur Race... Great dance game  
U405... Phoenix Gates... High-resolution slideshow  
U407... Space & Space... Excellent pattern card game  
U421... AGA Kloned (3 disks)... AGA Kloned  
U432... Giger Tetris... Tetris clone  
U433... AGA Megaball... Brilliant breakout game  
U434... Mac Jet Fighter... 2 player Street Fighter game  
U437... Motorola Invaders (2 disks)... Brilliant space invaders  
U440... Prist AGA... Arcade AGA game  
U443... Micali Over Zenon (2 disks)... 3D missile command  
U444... To the Death... Street fighter clone  
U445... Excellent card games II... Restricted AGA version  
U446... AGA Donkey Kong... Re-hash of original. Good  
U506... Bulle Dog... Multiplayer artillery game  
U507... Samurai Showdown... Street fighter clone  
U510... Rakitz V2.25... Multiplayer thrust shoot-'em-up

## Pinball Mania

Hollywood Hustler is set in Hollywood, but the hustle seems to be in loading the game.

Find out if Amiga Format agrees with Amiga Technologies choice of Pinball Mania as the game to display the real power of AGA.

### AMIGA FORMAT

#### HOLD TIGHT...

As the biggest Amiga mag in the world, it's our duty to provide you with the best coverage of the goings on in the world of Amiga games.

If we had decided to lower our reviewing principles this month, we could

have brought you reviews of *Speris Legacy* and *Alien Breed 3D* and pretended that they were finished. Unlike some of our competitors, though, we believe that this sort of action is heinous in the short term and destructive in the long.

Certainly, inclusion of *Breed* and *Speris* would have made our games section look a lot meatier than it does this month. A smidgen of bad luck has been involved too - we're literally a couple of days away from full reviews of *Thomas the Tank Engine*, *Andre Agassi's Tennis* and *Audiogenic's Imran Khan's Cricket*.

Besides those, there are still a host of excellent games waiting in the wings that'll be ready in time for next month.

So, don't feel too despondent. The general feeling at the ECTS from many of the games publishers was that their developing policy will be reviewed after Christmas if the Amiga does well. They know it's a buoyant market and nothing else can touch it for user-loyalty.

Steve McGill

#### AMIGA FORMAT'S REVIEW POLICY

Every month we scour the world's software houses for the latest and greatest Amiga games. We try to ensure we keep you up-to-date as possible and we'll stop at nothing to bring you the best, definitive, no-nonsense reviews of the games that matter.

#### WHAT OUR REVIEW SCORES MEAN

**80-90%**  
The crème de la crème. Only the very best, most playable and original games are awarded an AF Gold - the most highly prized rating there is.

**80-89%**  
These games are very good, but due to minor flaws are not the finest examples of their genre.

**70-79%**  
Good games which are worth buying, especially if you have a special interest in a game type.

**60-69%**  
Average releases with somewhat limited gameplay and appeal. Games in this category tend to be flawed.

**50-59%**  
Below average games which are unlikely to impress your mates or your wallet. Avoid.

**40-49%**  
Overwhelmingly poor quality games with major flaws and appalling gameplay.

**Less than 40%**  
The absolute pits.

#### IN PREVIEWS THIS MONTH ARE...

##### VIRTUAL KARTING

page 42

If at first you don't succeed, try, try again. OTM failed with their first driving game. This time, if the demo they sent us is anything to go by, they seem to have captured the recipe for success. See if you agree.

STREET FIGHTER: Top CD<sup>32</sup> fighting fun.

TRACK MAN 2: Modular design being perfected.

WRITE TO PERFECTION

# Final Writer 4

A new branch on the SoftWood family tree

Already the Amiga's most powerful word processor, publisher, new Final Writer 4 now introduces a unique user interface that's simpler and even more productive to use than any other.

With our new ClickTabs™ actually in the document window, navigating through the pages and sections of your work couldn't be easier!

Equally as revolutionary, is the new built-in CorrectText™ grammar checker making Final Writer 4 the only Amiga word processor that reads, spells and checks your document actually helping you...

**WRITE TO PERFECTION!**

Final Writer 4's new innovations simply add to a feature list, already the most comprehensive of any Amiga word processor!

If you would like to place an order or just require further information, please call our...

Order Line

**01 773 521606**

\*Help on system requirements: Our products are the most economical in their use of system resources. Like others, we quote the minimum required to load our software, but please note that as with all programs, more memory/lower Workbench may be required to access all graphical features fully. If in doubt, please call.

Who else but the World's leading Amiga home & office productivity software developer could offer you such a wide range of award winning programs?

A range acclaimed as the best for your computer with individual programs having received Amiga Format Gold, Amiga Computing Blue & Gold Chips, CU Amiga Top Rated and many, many others worldwide.

## Final Writer 4™

Word Processor/Publisher

The most powerful Amiga word processor for users needing the highest performance and most comprehensive range of features.

- Textfields™ - to position text at any size and angle
- FastDraw Plus™ - versatile selection of graphics tools
- TouchTools™ & PowerUser Bars™ - One touch commands
- PerfectPrint™ - You just can't print better on your Amiga
- French, German and Norwegian dictionary options
- Output PostScript™ fonts & clip-art to all graphic printers

**£74.95**

\*Amiga running Workbench 2.54 or later with a hard drive and a minimum of 2.5MB of free RAM. More recommended.

## Final Copy II™

Word Processor

This powerful alternative is the ideal companion for Amiga users with single or twin floppy drives and a lower memory size.

- PerfectPrint™ - an advanced system that enables you to output PostScript™ smooth fonts to ANY printer in both landscape and portrait modes
- FastDraw™ - on screen drawing tools for creation of boxes, lines, borders, arrows etc.
- Other features such as newspaper columns and import of graphics and pictures with scale, crop and autolove™

**£49.95**

\*Amiga running Workbench 1.1 with floppy or hard drive and a minimum of 1MB of free RAM (1MB - 1.5MB - more recommended)

## Final Data™

Database

A powerful yet simple to use database with extensive features enhancing your potential to store important information EASILY.

- Easy definition of columns for categories of information such as name, house number, street, town, county, postal code, phone number etc. - no unfamiliar commands!
- Built-in routines for rapid label printing
- Printmail merge with word processors
- New 'Memo' feature, acting like a 'Post-It' note, to enter large amounts of text within any record

**£39.95**

\*Amiga with floppy or hard drive running Workbench 1.1 or later and minimum of 512K free RAM (1MB - 1MB)

## Final Calc™

Spreadsheet

The answer to every spreadsheet users dreams! With its flexible modes of operation, it's ideal for beginners and experts alike.

- Layered sheets for multiple linked spreadsheet operation
- Advanced Printing and font handling with auto-fit to page(s) and complete document scaling
- Vast choice of graph styles including 3D and animated to show calculation results actually as they progress
- Unlimited number of Undo and Redo events with listing
- Lotus 1-2-3 WK1 compatible & full text file import/export

**£39.95**

\*Amiga running Workbench 2.54 or later with a hard drive and a minimum of 2MB of free RAM. More recommended

## STAR CRUSADER

**GameTek ■ 01753 553445**  
Crusaders were the scourge of the heathen earth in the early centuries of our illustrious history. They were the twelfth century equivalent of Saladin Rushdie with armour, attitude and religious antipathy.

Suddenly, after a short break of around 800 years with loads of inconsequential wars in between, computer games and GameTek appeared on the scene with *Star Crusader* on the Amiga.

Now, instead of fighting on horseback with a sea of desert between you and the Saracens, you fight against an enemy of your own choice with a sea of spatial vacuum separating adversaries from friends.

**STAR CRUSADER:** The tactical battle map helps Crusaders make fighting decisions.

The quest is simple. Choose a side in a vast interstellar war. Lead the war against your enemy, choose tactics, make command decisions and conquer territories fought in pitched battles in space. Territories gained and territories lost show up on a strategic battle map and allow the *Star Crusader* to plan strategies to further his/her aim.

There's a choice of eleven different ships to do the business in. Each sports its own individual flight characteristics. The ships are intended to look pretty and, indeed, their individual demeanour will help the player identify all the more with them.

Fans of *Wing Commander* may feel somewhat uncomfortable about *Star Crusader's* similarity, both in plot and look and feel. But, considering what we have already seen, there certainly seems to be enough scope to be different and enough depth to offer considerable longevity.

The demo we got to play set us on a simple mission to destroy three freighters. Using a standard 2Mb 1200, we found it to be a bit slow, but not so slow that control was finicky.

And, to help things along a bit, there's a toggle for an NTSC screen which increases the running speed just enough for the player to gain a realistic feel for the handling of the ship.

It's still too early to make any conclusions about the game, but if the mission we played is anything to go by, it could definitely excite some interest from Amiga gamers. Especially if they're fans of *Elite* or *Wing Commander*. *Star Crusader* should be ready in time for a full review next month.

**STAR CRUSADER:** Take enough time to line ships up ships in your sight and then kill them.

**STAR CRUSADER:** Richard the Lionheart would probably be interested in looking at this.

**STAR CRUSADER:** There are several weapon types to choose from, as well as many different views to be used when hunting down the enemies.

**STAR CRUSADER:** Vacuum cleaning antics were always appreciated for breaking up monotony.

**STAR CRUSADER:** Not quite the texture mapping extravaganzas of the PC, but the game's still pretty colourful. Colourful enough to be interesting.

**Continued overleaf ➡**

**VIRTUAL KARTING:**

**ABOVE LEFT:** Overhead racing is also an option for those who like hot air ballooning.

**ABOVE RIGHT:** There's real potential with *Virtual Karting* to be a Super Mario Kart beater.

**RIGHT:** Sometimes you get so close to the Karts in front you feel that you could kick them.

apprehensive. And that's where the first rule of game previewing journalism comes in. Never pre-judge anything, even if the previous track record of the

company involved has been less than inspiring. For *Virtual Karting* has the hallmark and potential to be a fabulously competitive, high-selling racing game.

Superficially resembling Super Mario Kart on the SNES, several of the AGA chipset's chunky modes have been utilised so that different scales of view can be utilised by the gamer. Resembling the famous/infamous Mode 7 of the Nintendo console, *Virtual Karting* also offers an overhead, taken-from-the-Good-Year-blimp view.

The resemblance to Mode 7 doesn't stop at the look of the game, however. The rotational feel of Mode 7's control system is the same and the graininess of the textures and the screen resolution is also in keeping with that mode.

Anyone who's ever driven a kart will realise that their use in the game is a wise choice in that they complement the game mechanics. Karts have probably got the tightest turning circle of any fixed-chassis, four-wheel motor vehicle.

In real life, it's very easy to spin them round 180 degrees with a deft squeeze of the throttle and a sharp twist on the steering wheel. And that's what it feels like and plays like with *Virtual Karts*.

On the downside, it looks as if there's only going to be three tracks to race on. Twelve were mentioned by OTM's Systems Director, but it seems that they're destined to be released on coverdisks and update disks for the future.

The preview copy we got to play around with had the option to play it using either a mouse, an analogue joystick, or a standard digital joystick. Unfortunately, with the digital joystick, it's Forward only to accelerate. The fire button is used to change gears manually. No option for fire to accelerate exists. Hopefully, this will be changed in time for the review.

In all, *Virtual Karting* looks very promising and may turn out to be the surprise driving game of the year.

Full review next month for those prepared to wait.

## VIRTUAL KARTING

OTM Publication & Promotions Ltd.  
■ 01827 67010

OTM Publications were the people responsible for *Touring Car Challenge* which we reviewed in *Format 74* and awarded a paltry 21%.

There were numerous reasons for the low mark, the main one being that the game quite simply wasn't worth the asking price of £29.95. It was after a mere update of an F1 Licenceware game called *F1 Challenge* which, even at the measly cost of a fiver, was hardly inspiring.

So, when we were informed of OTM's most recent upcoming project called *Virtual Karting* you could forgive us for feeling a bit

**VIRTUAL KARTING:** The black lines are supposed to represent infield rubber. They lie on the racing line, but can be very confusing.

**VIRTUAL KARTING:** The screenshots don't do the game justice. In motion, it looks grainy and gritty, while still managing to remain pretty.

**VIRTUAL KARTING:** There are four different views in all. Here we see the 'on the ground, in your face' view. Best for the sensation of speed.

**Telephone Orders:** Monday to Friday 9.30am to 4pm  
Saturday & Sunday 10am to 7pm

**Answering Service** at all other times.

## SEVENTH SWORD OF MENDOR

AGA Amigas ■ Grandslam  
0181 680 7044

Grandslam were one of the first developers to contact us when news of the Commodore buy-out hit the industry's consciousness.

"There's a real buzz in the Grandslam office with the news," enthused Chris Warrender, their Marketing Manager.

Due to this, the Amiga has again become a central part of Grandslam's development and strategy plan.

Work on *Seventh Sword of Mendor* is now in full flight and, if everything goes according to plan, should touch down for a late autumn release.

Described by Grandslam as being very similar to *DungeonMaster*, but for the Nineties, it features an

extremely large playing area and has been compared to the playability and structure of the *Ishar* series married to the graphical style of *DungeonMaster*.

As is the norm for an RPG, a party has to be selected by the player. Six races and six professions are on offer and this is where the style, personality and approach of the player comes into play.

The default party will consist of a yin yang mix of muscle and magic; two fighters, a thief, a ranger, a priest and a cleric. But it needn't be so.

If you're into melee rather than magic, opt for a party of fighters or vice versa. It'll all depend on your outlook.

Each character has different characteristics and skills that can be improved throughout the game.

And so to the plot. You have to recover the seventh sword of Mendor,

which has been stolen. While verging on cliché, it sounds strong enough to drive the action and force some tough decision-making on the player.

To achieve the main quest, though, you have to engage in ten sub-quests. Each of which throws cunning puzzles at you.

As the game has an open-ended approach, some lateral and tangential thinking has to be indulged in.

Along the way, the player will find that there are 30 different types of swords to be used, together with a unique 'herbalism' mechanism that lets the player create potions, spells and other magical brews, and customisable weapons and wands.

From what we've seen so far, it should fit the bill for all Amiga RPG fans out there. Barring unforeseen mishaps, a full review will be in evidence next month.

**THOMAS THE TANK:**  
Above: Sir Topham Hat pretends that he isn't vertically challenged.

**THOMAS THE TANK:**  
Remember kids, don't try to play pinball on the rail track.

# THOMAS THE TANK ENGINE PINBALL

1Mb Amigas ■ Alternative  
01977 797777

Who says you can't call the Fat Controller the Fat Controller any more? Not *Amiga Format*, that's for sure. He's the Fat Controller. Do you hear us? THE FAT CONTROLLER!

Sorry about that. The non-specific, fascistic, liberal, wishy-washiness of the politically correct just got to me there. Apparently, the Fat Controller's been burdened with some stupid insipid characterless name Sir Toppam Hat

Anyway, *Alternative* previewed this charming pinball game for us in our sister magazine *Amiga Power*'s office. They're targeting the game at families with young children, the intention being that families will form closer bonds with each other through a bit of friendly competition playing the game.

*Thomas the Tank Engine*, of course, is the perfect icon for all of this family-frolicking due to his cult popularity among the toddling, blue train set.

There are four tables to be played on, each one representing a character from the Thomas books: Thomas himself, James, Percy and Toby. As such, kids will immediately identify with the game.

To further hook the young'uns, the exit lanes (the bits at the side which lose the ball for you, thus proving that there isn't a God and that life isn't fair) guide the ball back on to the flippers and, therefore, prolong the life of the silver ball and help hold back youthful tears of injustice.

Furthermore, the game can be customised in a limited fashion; the slope of the table can be changed in increments, the steeper the table, the harder the game; the number of balls in each game can be selected, anything from three to ten; and there's a high score table, so that kids can rub it in to their mum and dad just how much better they are at pinball.

In fact, we tend to think that aiming *Thomas the Tank Engine Pinball* at the family market is limiting the all-engaging appeal of the game. If there was an option to switch the exit lanes to their more adult function of inducing cursing and inciting blasphemy, this one would pull in the big boys and girls as well. We just missed this for a full review this month, so, as we've been known to say before, full review in next month's issue.

## TRACKSUIT MANAGER

1Mb Amigas ■ Alternative 0197 797777

When the original *Tracksuit Manager* appeared in the Eighties on the 8-bit systems, it was an automatic smash. The reason for this was simple.

It threw out a load of the tedious financial aspects that had beset the genre and instead concentrated on tactics and team planning. It also pioneered the implementation of in-game commentary. Although, in retrospect, maybe that was a bad thing due to just about every management sim copying it and, in most cases, doing so very badly.

In the new version, *Alternative* claim that everything's been radically speeded up, advanced, revamped and redesigned. The tactical engine is now compact, biggie and ultra modern.

Moreover, as Roger Huley from *Alternative* was keen to point out, the modular design of the engine lets you jump from feature to feature quickly and seamlessly. It saves loads of time and makes the interface a joy to use, rather than a bind.

The front end presents the user with a picture of a manager's office, not unlike those found in the *On the Ball* series of sims, but will probably end up being used only rarely due to the aforementioned design.

There's lots more to say, but we'll expand on those in the main review which should be with us at the end of September.

## TRACKSUIT MANAGER 2

Below: Skills can be toggled between comments and stats.

Below bottom: The Manager's room is where it all happens.

**TRACKSUIT MANAGER 2:**  
Above left: *Tracksuit Manager* pioneered match commentary first time round.

**TRACKSUIT MANAGER 2:**  
Above: If you don't want to sit through the match commentary, it can be speeded up.

**TRACKSUIT MANAGER 2:**  
Above right: Formations, players, tactics, etc. can all be changed from varying screens.

## TRACKSUIT MANAGER 2

Keeping an eye on the Sunday papers is a must. That way you'll be able to work out which players are worth scouting out and which players are worth buying.

## FLIGHT OF THE AMAZON QUEEN

1Mb Amigas ■ Renegade  
0171 891 4300

Talk to your parents or your grandparents (all depends on your age) about cinema in the days when they were a nipper and you'll be surprised at just how interesting going to the pictures was in their time.

Morning cinema usually featured adventure series like *Rocket Man*, *Flash Gordon* and *Cliffhanger*. At the time, they represented state-of-the-art fun and excitement.

Now, they're laughable, but

**FLIGHT OF THE AMAZON QUEEN:** Familiarity with all of the characters is important.

**AMAZON QUEEN:**  
Above: Has the potential to be up there with *Monkey Island*.

**AMAZON QUEEN:**  
Above right: What's a Lola the rest of the team asked?

**AMAZON QUEEN:**  
Far right: Potentially as complex as *Beneath a Steel Sky*.

**AMAZON QUEEN:**  
Middle: "Are you calling wurla a pretty bird?"

nevertheless lovably enjoyable.

It's this ethos that *Renegade* are attempting to capture with *Flight of the Amazon Queen*. Vaunted as an "irreverent pastiche of the adventure serials that were popular in the 1940s", it's said to be "brimming with fun-filled action and a progressively difficult level of play."

The player's put in charge of a pilot for hire character who goes by the name of Joe King. Joe can select which location he wants to visit by utilising a panoramic map screen. Once selected, the game uses a device known as full screen cutaway sequences which, apparently, gives the game "dramatic depth".

Joe can expect to meet many interesting people along the way,

including over-zealous missionaries, a race of Amazon women and their beautiful princess, a six foot pygmy tribe and a secret organisation called "Floda" who are intent on taking over the World.

Developed by Interactive Binary Illusions, *Flight of the Amazon Queen* will install to hard disk. Again, this is another game that should make into the next issue with loads of time to spare.

#### POLE POSITION: F1 TEAM MANAGER

Left: Adventurous camera angles, tracks and pens are promised for the view mode. Here we see a close up of some kind.

#### POLE POSITION: F1 TEAM MANAGER

Below left: Ascon reckon that you'll never think about *Grand Prix Racing* the same way again after playing this.

#### POLE POSITION: F1 TEAM MANAGER

Below: With any luck, Damon Hill doesn't exhibit the same ability to take Schumacher out of the race as he does in real life.

#### POLE POSITION: FORMULA ONE TEAM MANAGER

1Mb Amigas and A1200s ■ Ascon 0171 372 7435

We covered the rudiments of *Pole Position*, Ascon's *Formula One* management sim, in issue 74. At the time, we only had screen shots of an empty track and the promise that rendered cars could be watched racing over them.

Now that more details and more screenshots have turned up, we thought you might like a quick update of the work currently in progress:

Ascon have thoroughly researched just about every aspect known to man concerning the elements, mechanics, and strategies behind the management of a successful *Formula One* team. As such, the level of detail is staggering – just getting to grips with the beast will be an impressive task.

Contracts, Public Relations, team motivation and financial investment have to be taken care of. Technology, car construction, crash dynamics, prototype testing and spare part inventory demand the Manager's attention.

And, as if that wasn't enough, during the race, sense has to be made of constant telemetry feedback from the car as it races on the track. This way, the car can be called in for pit stops and the like at the optimum moment.

While the car is racing, the Manager also has the option to watch the race through TV-style coverage. Different camera angles are available.

Ascon claim that each track is made up from up to 800 detailed frames which, due to special boost routines, means that animations are uninterrupted.

Furthermore, the game breaks up into two main strategies; long term and short term.

The long term involves preparation for the next racing season and the short term involves the two-week preparation time for each race.

Considering that *Pole Position* comes from the same people who brought us *On The Ball: World Cup* and *League* editions, the title looks very promising indeed.

## SUPER TENNIS CHAMPS

1Mb Amigas ■ Audiogenic  
0181 424 2244

A couple of month's back, there was a distinct lack of copy flow in the *Amiga Format* office due to a tennis game called *Tennis Champs* sent to us by Elton Bird of Mental software.

We found it to be such terrific fun that we passed it on to Audiogenic, who promptly signed up the programmer to re-tweak it, add new features and players and generally turn it into a serious commercial proposition. Originally programmed in AMOS, it's been re-coded using Blitz.

The extra speed of Blitz means that *Super Tennis Champs* will feature doubles, with players having the option to play with a computer

or human partner. At the time of going to press, Audiogenic have sent programmer Elton Bird a parallel port joystick adaptor, so that he can insert the relevant code to allow four people to play at the same time.

Further gameplay enhancements will include a CD32 controller option which will make it easier for the player to pull off different kinds of shot.

**SUPER TENNIS CHAMPS:**  
Above left: Four players playing doubles should be top fun.

**SUPER TENNIS CHAMPS:**  
Above centre: CD32 controllers will let the player pick their shot.

**SUPER TENNIS CHAMPS:**  
Top: You can choose from any one of sixteen characters.

**SUPER TENNIS CHAMPS:**  
Above: Different court types have been designed to radically affect the style of in-game play.

**POLE POSITION: F1 TEAM MANAGER:**  
Although the Amiga 500/600 version of the game isn't going to look anything like these screenshots, the A1200 should display them with aplomb.

# Liana

Are you in need of a fast and easy connection between two Amiga's? Liana, the low-cost network solution, is exactly what you want! Just plug it in, install the software, and it runs! Nothing could be easier than that. Liana is the network solution for those with a small budget and big needs. You can even share your hard drives and printers.

- For every (1) Amiga from WB 2.0 on with a free parallel port
- Includes cable
- Includes Commodore's Envy networking software
- English manual
- Automatically reconnection after (re)booting without new startup
- Every machine usable as server and client

£ 64.95

# Pablo

The video module, Pablo, expands your Picasso II with two new video outputs. Using the Pablo, you can view your Picasso output on any TV or VCR. All with quality that you would only expect to see from broadcast video encoders. That is why the Picasso II video encoder module.

Pablo, won in the (German) magazine 'Amiga Magazin' (Issue 5/94) test for video encoders.

- Three cables included: RCA, S-VHS and SCART
- 5 floppy disks with drivers, animation demos and more
- 2480 Animation program included
- 15kHz overload protection
- 2 well written manuals
- Plugs onto the Picasso II - no Zorro Slot required
- Easy installation of video modes

£ 129.95

# Picasso II RTG

Picasso II RTG, the graphics board all others are measured against:

- Graphics board for all Amiga's with Zorro-Bus - Workbench driver to reformat all programs and WB to the Picasso
- Supports up to 256 colors with WB3.1, even on A2000 and A3000
- WB resolutions definable up to 1600 x 1280 pixels
- HiColor (16bit) and TrueColor (24bit) graphics: 14M color!
- Drivers for most graphic programs such as Adobe, ImageFX, ImageMaster, Real3D
- Allows connection of any VGA or Multiscan monitor
- A1084 and A1081 are still usable with a special cable
- Block borders gone forever, takes full advantage of monitor's capabilities
- System-compliant implementation of monitorfile, resolution select table using screen mode requester
- Monitor-File compliant with System 2.x or higher, resolution selectable using screenmode requester
- View regular Amiga and special Picasso-II RTG screens on same Monitor without changing cables.
- Screen promoter to make older programs work on Picasso
- Draggable screens
- Available with 1MB or 2MB, upgradable from 1MB to 2MB at anytime

2 MB

£ 329.95

# Ariadne

Don't get overwhelmed with the complexity of setting up a network, use our Ariadne Ethernet card that is compatible with all Amigas that have an available Zorro Slot. This card is not only easy to network - it also equipped with 2 additional parallel ports offering multiple network solutions.

- 10Base-2 (Thin Ethernet, coax cable) and 10Base-T (Twisted pair, western jacket)
- Socket for Boot ROM
- SANA-II compatible driver for ethernet and parallel port
- Hook up to two additional Amigas to the parallel ports with Liana
- 32KByte cache to support CPU
- Includes Commodore's Envy networking software
- English manual

£ 219.95

NEW!!

# MainActor Broadcast

MainActor Broadcast is a completely new Animation Program. It works on all Amigas with at least 512KB RAM and Amiga OS2.04 or higher.

Features:

- More than 20 load- and save-modules for animations and pictures (XVI, BMP, DL, FLI, FLC, GIF, IFF, IFF-Anim3/5/7/8/9), JPEG, PCX, QuickTime...

- Complete AUI, Quicktime and JPEG Support up to 24 bit

- Index file for quicker reloading of animations
- Support of any graphics card with up to 16.7 million colors as well as standard Amiga-screen modes
- Effect modules for generating effects directly into the animation (Text, Scroll, Scale, Rotate, ...)
- 19 sound modules for sound- and music playback incl. compressing (i.e. Octalhed, S3M, etc. with B and 16 voices)
- Allows joining, converting, splitting and creating animations
- Easy-to-use intuitive graphical user interface
- Programmable AREXX Port

A game that's bundled with the new Amiga Magic packs, **Steve McGill** tests the flipper movement and puts the ball action to the test. But will he be coming back for more?

# Pinball Mania

## THE TABLES

### Tarantula:

Possibly the least enjoyable of the tables. If you pull the plunger all the way back, fire it off and don't nudge the table, the ball will find its way straight down the exit lane.

### Jackpot:

An intriguing table characterised by some very annoying features. Play Hi-Lo for big bonuses. Play roulette. Spin the reels and collect on big bonuses. Mildly entertaining.

### Jailbreak:

Vies with Kick Off as most engaging table. Capture prisoners. Judge them. Sentence them. Stop them from escaping and quell any riots and jailbreaks that occur.

### Kick Off:

My favourite table. Build a team, try and gain some subs. Kick Off. Score goals. Make your way to the cup final. Avoid the offside trap and go for the penalty shoot-out.

**P**robably one of the best things about pinball games on the Amiga is the fact that you don't have to play them in a smoky pub full of noise and interfering punters eager to ridicule you for any inadequacies in your play or playing style.

Also, pinball games don't cost a hefty quid for three measly credits; they let the player practice as much as required without resorting to mockery; they can be trusted not to have the tilt level set too high; and they offer a choice of different tables without having to physically move location.

But, in order to work, they must have a believable ball action; they must have flippers that work properly and act accordingly; they must have enjoyable sub-games; they must

entertain; and they must bring the player back for more.

### ON THE BALL

So, *Pinball Mania* then. What are we to think of it? It is after all the fourth in a series of, up till now, increasingly enjoyable pinball games from 21st Century Entertainment.

The first three: *Dreams*, *Fantasies*, and *Illusions* were coded by Digital Illusions. The first two of those worked with A500s and A600s. *Illusions*, however, was AGA only because, for the first time, it offered multi-ball – a feature that required use of a hi-res mode so that all the balls could be seen at the same time on the table.

*Pinball Mania*, surprisingly, is

**Continued overleaf →**

One nice touch that a bit of skill and timing can make the most of is the use of Tilt to bring the ball back into play, even after it's gone down the exit lanes.

## PINBALL MANIA

### Publisher

21st Century  
Entertainment  
Tel: 01235 851533

### Price

Free with Amiga Magic  
Retail price TBA.

### Versions

A1200

### System requirements

2Mb, AGA chipset

### Release date

Out now

### Graphics 6 out of 10

Do not show the AGA  
chipset at its best.

### Sound 7 out of 10

Competent. Nothing  
showy, flash, or tricky.

### Addiction 7 out of 10

Can take it or leave it.  
Not compulsive.

### Playability 6 out of 10

The ball and flippers  
aren't believable.

### Overall verdict

Nothing flash.  
Nothing innovative.  
It's all been seen  
before, only better.

# 76%

■ What is the point of an AGA-only game, when it doesn't make full use of the AGA chipset?

Just in case you missed it on the other page, here's all of the tables in their gushingly gorgeous AGA glory.

The most useful of the configuration functions is the ability to change the slope of the table and the ability to redefine the keys that direct the flippers, Tilt and Launch.

If only we could have spun the reels in time and got a jackpot of spiders, cherries or dollars. Then you'd have seen how good the Amiga Format team really is at pinball. Oh yes.

McGill's favourite table and one that he never stopped telling us about how he'd managed to go round the clock on all of the bonuses. Nobody believed him, but we humoured him anyway.

◆ AGA-only as well. Strange, considering that it doesn't look as good as Illusions, doesn't offer a Hi-Res mode, yet offers a hobbled version of the multi-ball feature.

In this instance, though, whichever ball is the lowest is the one the game follows. This basically

means that use of the upper flippers in most cases is redundant due to not wanting to lose any balls – there's no point, after all, in being able to operate upper flippers when the bottom ones are needed to defend the loss of a ball.

Unfortunately, it does make a

Just one more light to light on the arrest row (left) and we'll be able to bring judgement on a prisoner. If guilty, sentencing is next.

mockery of having a multi-ball feature in the first place. You have to ask yourself, what's the point when, as soon as you hit a ball above another, it might as well have been hit into cyberspace?

## NOTHING NEW

Indeed, what is the point of having the game as an AGA-only product, when it doesn't make use of the AGA chipset goodies at its disposal? It certainly doesn't show the potential of the AGA chipset, say, the way that Pinball Illusions, Fears, Gloom, or Alien Breed 3D do.

In fact, all it does really show is that 21st Century should have contracted Digital Illusions rather than Spidersoft to code *Pinball Mania*. Instead, they've relied on the coding abilities of the latter team who, quite honestly, made a hash of the conversion of Pinball Dreams and Pinball Fantasies on to the SNES.

Not that *Pinball Mania* is hashed up, mind you. It's just that it doesn't make it into the same league as Pinball Illusions.

When all is considered, it's a retrograde step that offers nothing new. Especially when compared to so

Shoot the ramps in sequence and keep shooting the ramps in sequence to achieve a massive bonus jackpot. It's either that or keep scoring goals and go for the penalty shoot-out.

Of all the tables, the Tarantula is possibly the least enjoyable. If you shoot off with the plunger at full stretch, the ball will run along the barrier just out of picture on the right and go straight down the exit lane on the left. Every time.

many other games out there displaying, in all their glory, just what an A1200 is capable of – even in its present power shackled 68020 2Mb minimum form.

So, we've reached this far and I still haven't told you a great deal about the actual tables, other than complained about the inadequacy of the multi-ball feature.

Well, unlike Illusions, it's back to the old 21st Century formula of four tables. This time round they are; Tarantula, Jailbreak, Kick Off, and Jackpot; each one sporting its own particular peccadilloes and character. Check them out in the little boxes, provided courtesy of the *Format* art people, dotted around these pages.

#### WRONG, WRONG, WRONG...

The biggest problem with Mania concerns both the strength of the flippers and the mechanics of the ball. One, if not both, are fundamentally wrong. They feel

wrong. They play wrong. They're wrong full stop.

Combined, they suspend the belief that pure skill alone will see the player's score appear consistently on the high score table. Too many of the skill shots rely on luck to truly put them into the rank of skill shot.

That's damning for a pinball game with the pedigree of its predecessors behind it. If I were a cynic, I'd suggest that 21st Century have lost interest in the Amiga market and have decided to avoid the extra expense of intensive game testing. But I'm not a cynic, so I've got absolutely no explanation as to why this has been included in the bundle.

Other than the strength of the brand name and the fact that there is a modicum of entertainment value well hidden away, it beggars belief that this has been chosen as a flagship game over the top of superior AGA-only games. Nice one, Amiga Technologies. ☹

Graphics 2 out of 10

Poorly digitised pictures. A waste of time.

Sound 3 out of 10

"Since my baby left me". We know why she did.

Addition 3 out of 10

If you like poker, then fine. Go to a PD library.

Playability 2 out of 10

Fiddly menus, silly loading and bum hands.

Overall verdict

Cards on the table, Hollywood Hustler is a desperate scam. Avoid it at all costs.

# 15%

**Hollywood Hustler** is the ultimate scam. It's a horse's arse if you'll forgive the term.

Hi. What I'm about to say hurts me more than it hurts you. As you know, I've been mutually confused lately, but I've finally managed to get my head straight.

Yeah, the fact is I've decided to run-off to Vegas and marry Mugs. My analyst. Sure, I know he's rich, good-looking and got a much bigger c than you, but those things don't matter to me. Anyway, try and remember the good times - we'll always have Paris!

**Barbie**

P.S. I hope we can still be friends?

The 'movie' intro sequence sets the scene. Barbie's gone off with another Ken. Hollywood beckons my son. Maybe not.

**T**he creators of poker game Hollywood Hustler apparently spend quite a time in Los Angeles' card clubs researching the tactical wiles of the game, mixing with the characters and generally getting a feel for the discipline that is poker. They wanted, apparently, to produce the definitive Amiga card game, combining authentic Hollywood location with professional cast.

What they've actually done is to produce a few poorly digitised pictures with equally unnecessary digitised sound effects. One of the three pack-shuffling protagonists

At the end of each hand, up pops a cash check where you can find out what a mug you've been taken for.

occasionally drifts into an Elvis impersonation, barking: "Since my baby left me" which degenerates into a mumble, much to the eventual chagrin of his opponents.

And he snores now and again when you pause to consider your next move. The other guys chip in with the odd throwaway comment. And, sure, the first time you hear them pipe up, you might stifle a chuckle, but really,

why waste time and energy on this type of nonsense.

Hollywood Hustler is the ultimate scam. It's mutton dressed as lamb, a sow's ear to silk purse. It's a horse's arse, if you'll forgive the term - though you must certainly would, should you be unfortunate (read mad) enough to fork out £25, for that, friends, is the asking price. Ooch, and indeed ooch.

The packaging for the game is a

## LOADING THE DICE

"Could be your lucky night punk" the doorman politely suggests. Well, it could be if the bloody loading instructions weren't so ludicrous.

Insert the first disk (the intro as it happens) and await the unpleasant digitised pics, equally unpleasant sound and

## DISK MENU

- NEW GAME
- LOAD GAME
- SAVE GAME
- VIEW HI SCORES
- QUIT
- SELECT LEVEL

thoroughly unpleasant gentleman who suggest that it "could be your lucky night punk".

Sign in your name and press return. Hang around a bit, then swap disks and fire the joystick button. There is no instruction to change the disks, apparently because the creators didn't want the, ahem, "cinematic flow" interrupted.

You are now faced with a screen, the words 'New Game' featuring prominently, a green light illuminated next to it. Not that this is what you want to actually access to begin the card game.

No, sir. You want to select your level first, though quite why the creators chose not to illuminate this option remains a mystery. Quite astounding.

You're gaping in awe at the digitised graphics, aren't you? And I've been dealt another bum hand.

Cards on the table time. Ouch, I've just spent £25 on Hollywood Hustler.

video cassette with a sassy, green baize trim. One wonders quite why Desert Star should expend time, energy and hard cash to produce this when there is clearly so little to be found within.

If they'd spent a little less time trumpeting the fact that *Hollywood Hustler* uses a vast amount of disk space for digitised sound and pictures, and put a little more effort into the actual game, maybe, just maybe, one wouldn't feel that a reuse was in progress.

Yes readers, we've been dealt a bum hand. Not that you can do much with a card game anyway.

*Hollywood Hustler* is simply five-card draw poker and who gives a damn whether the sodding characters have different tactical styles; that one can bluff, check, raise the stakes, etc.

Those in need of an Amiga shuffle can put in a call to their local PD library, saving themselves a vast amount of money in the process.

Whatever Desert Star's intentions, and they may well have been to produce the definitive, atmospheric poker simulation, there is simply no justification for charging £25 for what is no more than a flashy PD game.

Another visual feast. Apparently, one of your opponents owns the Pussycat 'theatre'. I don't think they're showing *The Sound of Music*. Well, not the original version anyway.

# CD32 Check

## SPEEDBALL 2

(AF72; 91%)

Renegade 0171 391 4316 ■ £14.99

An ageing classic, converted to CD and all for a very reasonable 15 nicker, although *Speedball 2* may have been around for years, it's still the definitive, violent-but-subtle-in-equal-measures sports sim.

Play the ball short, play it long. Barge your opponent remorselessly into the side-wall with that new armour you bought after winning the last couple of matches. Quite remarkable.

## SHADOW FIGHTER

(AF72; 89%)

Gremlin 01142 753423 ■ £29.99

Beautifully drawn and a vast range of characters and moves, the might of *Shadow Fighter* caught us by surprise. This beat-'em-up is reckoned by many observers to be one of the greatest of the Amiga's pugnacious games. It is.

## SYNDICATE

(AF72; 90%)

Mindscape 01444 246333 ■ £34.99

Bullfrog's graphic, violent cyberfest turned up on a silver platter two years after its floppy outing. You're a special agent, fighting a strategic corporate war with rockets, machine guns, flame throwers and, best of all, you can buy cyborgs to do all the dirty work.

92%

**SKIDMARKS 2.** This game has captured the office imagination like no other in '95. The cunning blend of speed and dextrous joystick skills require both concentration and application.

It's beautiful by design, graphically gory and with missions by the truckload; a real challenge.

## SUPER SKIDMARKS

(AF73; 92%)

Guildhall Leisure 01302 890000

■ £29.99

Not only the finest racing game on the CD<sup>32</sup>, but a fantastic, playable demo of the Earth-shattering *Defender*, the PD version of *Defender* and the stupendous, rendered Roadkill intro sequence.

To *Super Skidmarks*, though. Up to eight can bounce, bump and slide their way through a plethora of courses, driving buggies, Beatles, racers, pick-ups and even caravan-towing cows. Brilliant for one, stonking with eight.

## Exile

(AF76 88%)

Audiogenic 0181 424 2244 ■ £29.99

A modern update of an almighty classic, *Exile* is one of the few games that can truly fill the lofty title of arcade/adventure.

You have to rescue the Supreme Commander of the Empire from the evil clutches of a madman known as Triax. Armed only with a jet pack and a gun, you soon find that mastery of gravity and inertia are a paramount part of the game.

Part of the deal that the programmers of *Odyssey* made

with Audiogenic was that they be sent the solution to *Exile*. They are great fans of the game.

## Gloom

(AF76 91%)

Acid (Guildhall Leisure) 01302

890000 ■ £29.99

The top Doom clone on the CD<sup>32</sup>. Characterised by pace, aggression, squelchy noises, and bodies that break up and stay in pieces on the floor, enabling you to tell where you've been.

Out and out speed/kill freaks can reduce the detail and resolution of the screen so that everything plays at breakneck terminal velocity. There are weapons upgrades to be found, teleports to be negotiated, power-ups to be powered and secret rooms to be sought. Along the way, various nasties will try to stop you and you must kill them.

Tremendous fun with the difficulty level set at the perfect level to keep you coming back for more and more and more...

## COMING SOON

### Odyssey CD32

Audiogenic

Release: Imminent

We reviewed the floppy version in AF76 and absolutely loved it. The programmers are big fans of *Exile* and in parts it shows. The secret of success lies in changing into certain creatures with different powers. A beautiful little game.

### Fears CD32

Guildhall Leisure

Release: October

Another impressive-looking Doom-clone. It's similar in style to *Gloom* with levels galore and serial-link options. The demo we've seen looks great with smooth, quick screen-updates and some strange monsters.

### Andre Agassi Tennis CD32

Guildhall Leisure

Release: End of October

After a journey taking it half way across Europe and then back to New Zealand, Acid's alleged definitive tennis game will be arriving shortly on floppy and a few weeks later on CD<sup>32</sup>.

### The Lost Eden CD32

Virgin

Release: September

You are Adam in Eden, making pals with the animals in this point 'n' click adventure. The consequences of your actions are shown in a series of stunning rendered, movie-style clips. Looks great, but will it play?

This is DJ Drill.  
As you probably know,

DJ Drill is a **Mandrill**.

Drill was born with an **excellent nose**  
to scratch records.

During a recent beach party in Guinea,  
Drill was discovered by his manager who is  
currently planning a London Club Tour.

Since you don't have an excellent nose  
like this and you're **certainly NOT**

DJ Drill's manager, maybe you'd better do  
a modern apprenticeship. If you're aged  
between 16-19, you get the chance to gain  
a qualification while you're working.

Or do you have an ant at home  
that knows how to boogie?

If not, please send this coupon to us and  
you'll get a very stimulating information

pack on all training initiatives.

You can also contact

your local

Career Service

or TEC for details.

The Information Pack explains more fully about Modern Apprenticeships  
(available now), National Vocational Qualifications and much more including  
who you should contact. Call **0345 665 588** anytime or write to the  
Training Information Service, PO Box 200, Timothy's Bridge Road, Stratford-  
upon-Avon, CV37 9HY. Minicom 0345 77 22 44 weekdays 9-5.

# PLAYER *Manager* 2 EXTRA

THE CHASE FOR GLORY

**ENHANCED  
VERSION  
FOR AMIGA  
1200**

## At last a game that unleashes the power of the Amiga 1200!

**Player Manager 2 Extra - The Chase for Glory** is the Amiga 1200 version of the chart topping **Player Manager 2**.

Graphically enhanced throughout, **Player Manager 2 Extra** boasts a multitude of thrilling new features, exciting options and great sound effects.

**Player Manager 2 Extra** remains the only game that allows you to play for the team you manage giving action on and off the pitch.

### A choice of four playing views

## Winning Features

- Tactics Designer with powerful ray trace facility
- Active transfer and loan markets
- Train players from schoolboys to multi million pound stars
- All the domestic and European cup competitions
- A choice of four playing views. Play as a team or in position
- 1-4 Players
- Thrilling match reports
- Alan Hansen predicts
- Greatest games, greatest goals, champions, disasters and scandals - READ ALL ABOUT IT.

Registered users buy this great new version for only  
£10.00 (includes P&P). Contact Anco for details.

### Detailed Management Tools

## Extra Gameplay!

### New for the Amiga 1200

- Real Teams - Real Players - Real Stats
- Unique skill, coach and management assessment tools to pick your best team
- Three skill levels
- Animated scoreboard style predict and after match highlights
- Challenge round. Use bonus points won to secure a management position with a big name club
- Manager and player awards. Will you be named Manager of the Month?
- Enlarged coaching section
- Endure the dreaded press conference after the big games.
- Comprehensive manager assessment throughout the year.
- Player Manager World - Up to 8 players compete to see who really has created the ultimate team.

### Stunning New Graphics

Once again **Steve McGill** celebrates the winners and frowns upon the losers in our regular page on the best and worst in the Amiga games world.

# Games Check

## FEARS

(AF76; 92%) **Manyx**  
Truly inspirational use of the AGA chipset merges with a Doom-clone so tough that it probably offers the best value for money of any game on the market at the moment.

Also included is an editor and advanced editor to create your own dungeon scenarios, as well as that all-important link-option, enabling you to hunt down and kill your best friends.

## ODYSSEY

(AF76; 85%) **Audiogenic**  
Beautiful little platform-based arcade adventure that plays at a pace set by the gamer himself. It can be fast; it can be slow; it can be in between.

Requires a bit of thought on the best way of overcoming seemingly insurmountable problems, but the ability to change into any one of ten creatures certainly helps. Great!

## SUPER STREET FIGHTER 2

(AF75; 88%) **US Gold**  
Despite the smallness of the sprites, the excessive number of disks and disk swaps, *Super Streetfighter 2* manages to capture the gameplay, combos and special moves of the arcade original in a way that excited our resident *Streetfighter* champion, Graeme Sandford to sum it up as: "Surprisingly good, except for the graphics".

## VIROCOPI

(AF73; 83%) **Renegade**  
Top Amiga writers, Graftgold, returned to the fray with this slick, polished shoot-'em-up, packed with neat, graphical touches and, shock, some good music.

A game within a game, you battle through various game genres, blasting all and sundry.

The writers have played obvious 'homage' to games such as *Chaos Engine* and *Cannon Fodder*, and the graphical references are not very difficult to spot. Almost too cunning.

## COLONIZATION

(AF74; 95%) **MicroProse**  
The biggest score in *AF* since Sensible World of Soccer scored the same last Christmas, Sid Meier's follow-up to *Civilization* is a fabulous, strategic journey to the Americas in which you attempt to wrest control of as much land as possible, through means foul or fair. Trading is the best way to succeed - importing and exporting. Oh, it sounds dull, but very few games attain the same high standards as those of *Colonization*.

## ROADKILL A1200

(AF74; 80%) **Guildhall Leisure**  
Rumbling rock music, heaven-sent explosions and graphics to kill for, this one-player racing game includes rockets, homing missiles and handy on-screen hints, such as: "Drive really fast and kill everyone!". Normally, we at *AF* slash scores with abandon if the programmers fail to offer a two-player or link option, but this is so tidy, all is forgiven. Worthy.

## SENSIBLE GOLF

(AF74; 81%) **Virgin**  
An ambitious project for *Sensible* to take their Amiga-bow, but they just about pull it off in this quirky, overhead golf-sim. Sure, some of the holes are ridiculous, and it takes time to learn the ins and outs. But Steve Bradley liked it and he was the Games Editor, so he must be right, right?

## GLOOM A1200

(AF75; 91%) **Guildhall**  
One of the main contenders for the accolade of top Doom-clone on the Amiga, *Gloom* was created,

developed and programmed using Amiga-only software: Devpac2, Blitz Basic2, Art Department Professional and Deluxe Paint.

It puts the proverbial finger up to developers with pretensions of global grandeur and proves that you don't need a marketing-budget the size of a lottery-win to create successful, exciting games.

## DISASTER AREA

Cover thine eyes, sweet child, from these ABOMINATIONS

## BRAVO ROMEO DELTA

(AF78; 30%) **Guildhall**  
Up to the minute political topicality is merged with a backward, awkward control system from the heady world of IBM PC compatibles in the '80s.

Anyone in their right mind should avoid at all costs. It looks and plays absolutely horriby and should be made to suffer from mutually assured destruction.

## SUBVERSION

(AF76; 10%) **Guildhall**  
Any feature of a game can be twisted round and made into a benefit. So, from an advertising point of view, *Subversion* boasts hundreds of thousand of different combinations of play and ten levels of difficulty. In reality, it presents you with one sub-standard ZX Spectrum screen which is so poor it doesn't even make it on to the glossily packaged box. Avoid.

## TOURING CAR CHALLENGE

(AF74; 21%) **OTM**  
Piles of promotional literature, tie-ups with Alfa Romeo and absolutely no game whatsoever. Why on earth did they bother?

A text-based management simulation with quite howlingly awful race highlights which consist of a few cars bombing past a static screen. Oh dear.

**FEARS** A Doom-clone so tough that it probably offers the best value for money of any game on the market at the moment.

# Super Street Fight

ABOVE: Cammy (not to be confused with Cameron Winstonley) hands out some serious damage to her adversary in this bout.

RIGHT: Ryu does his usual arrogant thing and proves that he's got the biggest fireballs of any of SSFII's cast.

■ The compact disc that SSFII comes on eliminates disk swapping at a stroke.

In the conclusion to Steve Bradley's review of *Super Street Fighter II* in issue 74, he recommended that owners of single drives should avoid the game and that twin drive owners should only consider buying it. Hard drive owners however, should embrace it warmly.

The reason? Loading times. With a single drive it could take anything up to five solid minutes before the player even got a whiff of a bout. Unacceptable in this day and age, even with SSFII representing one of

the best beat-em-ups on offer in the Amiga scene.

That's why CD<sup>32</sup> owners should rejoice and rejoice loudly. For the compact disc that SSFII comes on eliminates disk swapping at a stroke. No longer must the gamer squint their eyes over illegibly small print requesting disk four, or was that disk five? Yes, no disk swaps makes playing a joy rather than a chore.

So. What about the playability? Considering that this is the CD<sup>32</sup> version it makes sense that the player

the special moves and combos of each character.

And all the original arcade characters are here too. Sixteen hustling, bustling, preening and muscling street fighters. Each sporting their own individual unmistakable kick-ass characteristics.

Who on the right side of 18 can fail to be impressed by the electrifying Blanka, the avian gracefulness of Chun Li, the raw brutality of Fei Long, or the Aryan arrogance of Guile? Not me, that's for sure.

The fait accompli of *Super Street Fighter II* is that our very own

LEFT: Blanka proves that anything the Colombian goalie can do, he can do better. Nice try Blanka, but no cigar.

BELOW: No one knows this, but before he was recast for *Batman Forever*, the Boy Robin used to be a SSFII star.

# er II CD32

ABOVE: A typical school playground scene. Everyone crowds round and nobody helps. RIGHT: Cammy finds that women's lib means nothing in this game.

technical editor and writer, Graeme Sandiford, has given the game his stamp of authoritative approval. He, after all, can complete all of the bouts in the arcade version without blinking an eye. He's an official regional champion and he reckons that the game's subtleties have been captured perfectly here.

Capcom supplied the programmers with the source code and collision charts from the arcade original. And boy has it been put to good use.

The main criticism, however, lies in the size of the sprites. Compared to *Mortal Kombat 2* or *Shadow Fighter*, they're simply too small. More like *Shaq Fu* really.

Beat-'em-ups really require larger sprites than this to be truly and utterly enjoyable.

Nevertheless, *Super Street Fighter II* has made it to the CD<sup>32</sup> and retains the playability of the arcade version in the process. For that we can be truly thankful.

## CHOOSE YOUR FIGHTER

Vega is heartless in the kill. Balrog is a big bully.

Cammy is a flasher.

Get off the screen Blanka.

DeeJay likes to play soul.

So short but so Fei long.

Ryu plays like Arsenal.

It's good to Thawf.

Chun Li and chips please.

## EASY LEDGERS 2

Integrated Accounting Software  
for all Amigas

A new generation of Professional Accounting software for the Amiga.  
EasyLedger 2 has several key areas as follows.

**Ledger** - General Ledger with optional account numbers. Post receipts, payments and journal entries. Reports include journals, audit trail, trial balance & account histories. Cashbook, Profit & Loss Statement, Balance Sheet & Company Performance Ratios. Password to maintain privacy.

**Sales** - Use open item or balance forward methods. Invoice printing with automatic pricing, VAT calculation, discounts & totalling, manual overrides. Enter hand-written invoices, credits, receipts & journal adjustments. Produces statements, address labels, sales analysis, aged balance lists, etc. Fully integrated with Ledger & Inventory.

**Purchase** - Use open item balance forward accounting methods. Enter supplier invoices, credits, payments & journal adjustments. Produces remittances, address labels, aged balance lists, transaction histories, etc. Fully integrated with Ledger & Inventory.

**Inventory** - Stock Control & Price Book. Handles three price scales with auto price changing. Entry of stocktake results & goods in/out movements. Full integration with other books. Reports include price lists, re-ordering report, sales & valuation, movement history, etc.

**Job Costing** - For Estimating & Quotation. Scales a wide range of invoicing needs for service industries. Invoice the charges on a job card. Allows 32 staff at different charging rates. Transfers goods directly from Inventory & Fully integrated with Creditor and Ledger.

FOR A LIMITED PERIOD YOU CAN BUY EASY LEDGERS 2  
AT THIS NEW LOW PRICE (was £199.99)

## IMAGE FX 2.1

The Complete Image Processing Solution  
for all Amigas

No other image processing package on the Amiga gives you everything you need, from precise colour correction tools to fantastic special effects that boggle the mind! Whether you are a print artist or a video magician, ImageFX is simply the fastest, the best, and the most complete image processing solution you will find on the Amiga.

### System Performance

The easiest to use and most powerful interface, thumbnail image loader lets you see your image before loading it, built in Virtual Memory allows work on images nearly any size, unlimited multi-level true UNDO, thumbnail image previewing shows effect before using it, multiple image buffers and brushes, precise region controls can restrict work to just part of an image, unequalled Arx support for macros and programming, user definable macro keys and menus, built in Macro/Arx script recording, two powerful batch processing systems: IMP and AutoFX & visual thumbnail image cataloguing system.

## ON SALE 28 SEPTEMBER

Last month we went into great detail about how to start up a colony in the new land. This month, **Nick Veitch** hopes to show you how to develop your colony into a brand new nation.

## SEND IT IN

If you have a hint, tip or cheat to share with other Amiga gamers, write to: Steve McGill, GameBusters, Amiga Format, 30 Monmouth Street, Bath, Avon BA1 2BW. Or, better still, send it on a floppy disk.

# GameBusters

Well, this little place is a bit of a shambles – fancy sending a criminal out to do the fishing. However, at least they got one thing right – an elder statesman spurring them on to liberty.

## COLONIZATION

Reviewed in AF74 ■ 95%  
MicroProse 01454 329510

### The bells

It is easy to neglect Liberty bell production. Very easy, but foolish. Not only do the bells and the rate that they are produced speed you towards independence, but they also help you get hold of invaluable founding fathers (see next page).

There are no hard and fast rules, but from the beginning, as soon as a colony can support anything above the carpenter/specialist/food producers minimum of a colony, you should get yourself a statesman. One colony at least should have an elder statesman, even if this means you forking out to buy one.

In the endgame, you may rely on foreign intervention to save you – the quicker you can produce Liberty bells the better.

### Tool up

A colony based around manufacturing should always be run by experts. Usually, you will be able to produce raw materials faster than any number of non-experts can turn them into finished product.

This is a wasted opportunity. By the time you are able to produce manufactured goods, the price raw

materials will fetch in Europe isn't worth the hassle.

Moreover, every fur (or whatever) that goes off because the warehouse is full, is another bag of gold lost forever.

### Doorstepping

You will notice that your evil European contemporaries will attempt to surround your colonies with fortified units. They will not immediately declare war, but their presence causes disruption, upsets the natives and is decidedly worrying.

Once you have a full-scale build-up, a landlocked colony will not be able to export any produce as the trade wagons cannot pass.

There are only two ways to remove the obstruction – kill them (thus, obviously involving yourself in a war) or negotiate with their masters, which can be costly. The best thing to do is deploy your own troops first, on the main thoroughfares. This keeps them free and does intimidate any interlopers. The downside is that it will upset nearby indians.

### It's sinful

If you don't have the assistance of founding father William Brewster, you will be plagued by next to useless criminals. Indentured servants aren't so bad, because you can just cart

Johnny Foreigner will try to obstruct and intimidate your colonies, just to give you a hard time. As ever, prevention is better than cure.

them off to the nearest Indian village to get themselves an education.

Training them yourself is not worth it. They take ages to become ordinary colonists, never mind anything useful. There are some things they are good at, though. Well, average at. You can use them as scouts. They travel just as fast and see as far as a colonist.

The added advantage is that if you come across an Indian village of scouts, they will be upgraded.

■ Indentured servants aren't so bad, just cart them off to the nearest Indian village.

Continued overleaf ➔

# FORGIVE ME FATHER

The founding fathers are the element that replaces "Wonders of the World" from Civilization. Every founding father (who are all real historical figures) brings a special bonus to your nation. Some bonuses are nice, but transitory additions – some can dramatically change the outcome of your whole game.

It isn't really possible to give a definitive list of the best fathers, because the best ones will depend almost entirely on the individual game you are playing. It is possible to offer suggestions though:

## STARTING OUT:

**Military: Herman Cortes** – An increased treasure yield from dispossessed natives. If you are playing the Spanish and are operating a shoot-to-kill policy regarding the indigenous population, you can't go far wrong with this one.

**Religious: William Brewster** - Allows you to select from three possible choices when a new recruit appears at the docks. He also prevents any criminals or slaves... sorry, indentured servants, from appearing. This can be the vital difference early on between building an efficient colony and one which is liable to be bogged down with second rate colonists.

**Religious: William Penn** - Increases cross production. Especially useful if you are playing the English, increased cross production will all but guarantee a steady flow of new blood for you to properly explore and stake your claim in the new world. Especially useful when combined with William Brewster

**Exploration: Sieur de la Salle** – An automatic stockade once a colony reaches three inhabitants is not to be sniffed at. Especially useful if the natives are less than friendly, or you find yourself next door to some evil

Obviously some of the founding fathers had trouble with wind. However, it is no understatement to say that they can dramatically alter the whole course of the game. Choose wisely.

Europeans – it also makes the use of makeshift camps harder.

**Exploration: Ferdinand Magellan** – Okay, a one square advantage in ship movement doesn't seem that great, but it saves years of game time in exploring the coastline. Maybe not as useful when playing a game set in America.

**Exploration: Henry Hudson** – Doubled output of fur can make you a small fortune early on, but, obviously, only if your colonies are geared towards its production.

### MIDDLE GAME:

**Political: Pocahontas** – If there are still any Indians left at this stage, presumably you aren't intent on murdering them, so keeping them

content is a good idea. You may elect to go for Pocahontas earlier in the game, but if you are going to kill, loot and burn, it seems pointless.

**Military:** Francis Drake – If you are actively pursuing Piracy as an easy means to make money, an extra 50% combat strength is very welcome. Pirate ships are more than a match for merchants, but with the bonus they stand a chance against laden galleons and can give frigates a run for their money.

**Political: Thomas Paine** – Use your judgement on this one. If you are being stung by the King for 25 per cent taxes, it is worth boosting your Liberty bell production early.

**Military: Paul Revere** – Very handy indeed if you employ a makeshift, transitory colony tactic. As long as you have muskets, someone will fight the invaders.

**Political: Thomas Jefferson** – By this stage you should have a few statesmen hammering out Liberty bells. A bit more power to their elbows wouldn't go amiss.

Well, there isn't always much of a choice, but you get the idea – you can actively pursue individuals to help your colony rather than just making do with whoever happens along.

A pirate is fine against a merchant, but with Drake you should feel brave enough to plunder galleons too.

Five hundred gold? Fine, I'll take half a dozen please - no, don't bother to wrap them. Buying your artillery is advised, at least until the price rises above 2,000 - they require a lot of effort to manufacture.

Alternatively, try pressing them into service as missionaries. They aren't very good at it, but they are better than nothing.

If you have George Washington in your congress, it is well worth issuing them with some muskets and sending them out to the nearest hot spot. Every time they win a combat, they will achieve a better standing (indentured servant, colonist, veteran). Many a victorious colonial army has been constructed in this way.

### New, moral army

The basic need for any colony facing the threat of their imperial masters kicking in the door and giving them a damn good hiding is at least two artillery pieces and two dragons.

Colonies near the sea need to take special care and, if possible, you should make every effort to make them fortresses. Fortifying, ill-defended colonies is worse than useless.

If you have a fortress with two dragons in it, although they may inflict

some damage on the King's men, they are unlikely to last more than one round. That means you then have to retake the Fortress - not the sort of thing you want to happen at all.

It is more important to have Fortresses well defended than any other colonies. A fortress with three artillery and a handful of dragons will inflict huge losses on the enemy. Even better still if it is well stocked with horses and has some capability for musket production.

It is important to start building up an arsenal early. You may be able to protect colonies from indian raids with some hastily converted colonists, but they are not going to be able to hold of the King's army, or even a determined European power. Fighting men fortified in your colony cost no food, so there is no maintenance cost.

Artillery pieces should be bought, at least until their cost in Europe goes up to 2000. In the time it takes to manufacture one, a reasonable colony should have cleared this much in other goods

Sometimes the indians do have their uses, so maybe you shouldn't kill all of them. You can make a killing with local trade if you supply the right goods.

# Re-releases

**MORTAL KOMBAT:** Above: Take your partners for the Mortal Kombat "Come Dancing" championships. Right: Sonya narrowly lost out to Sharon Davies for the spot on Gladiators

**MORTAL KOMBAT**  
Future Zone (Phone your nearest branch) ■ £7.99 ■ AF55; 74%  
Gosh! Looking back at the review of *Mortal Kombat* in issue 55, I've got to admit to being a tad shocked at some of the reasons given by Games Editor of the time, Rob Mead, for *Mortal Kombat* not being good enough to merit at least an eighty something percentage mark.  
"One of the main problems," Rob reckoned, was "that the backgrounds

**MORTAL KOMBAT:** Above: The first rule of *Mortal Kombat* is: "Never mess with anyone who only wears shorts and slippers". Above right: Goro wanted to know why he went through deoderant faster than anyone else

**MORTAL KOMBAT:** Right: In victory, Reptile was always polite, modest, humble and never boastful. But then again...

had been sacrificed to make allowance for the motion capture perfection of the digitised sprites".

Backgrounds don't actually do anything for gameplay, so why he considered that as a main problem is beyond me; unless, of course, you think that the aesthetic parts of a game are more important.

No, by any means, the most important element to be taken into consideration with a beat-'em-up is the intuitiveness of the control system

and the ease with which special moves can be pulled off.

The straightforward moves, such as punches, kicks and jumps, are all easily carried out and pretty generic to each *Mortal Kombat* character.

The special moves, while teetering on the edge of counter intuitiveness, are easy enough to pull off, but difficult enough not to be executed every time you go for them. In all, an even match of dexterity versus speed of thought.

**MICROCOSM:** Below: Spacemeister Dr Dyson looks around for the future to check out whether or not it's as awesome as he was led to believe.

**MORTAL KOMBAT:** Dr. Comfort certainly never envisioned this pair when he put his new book together. Shame really.

**MICROCOSM:** Left: There's absolutely no doubt that *Microcosm* was and is the best-looking game ever on the CD<sup>32</sup>. Above: Apparently, blockage of the oesophagus in computer games is quaintly known as choking.

#### MICROCOSM:

Above: Microcosm captured the maxim of aesthetics over playability in day. Right: Raquel Welch never even got a look in. Shame that.

As with all beat-'em-ups, playing with two players is the most entertaining, but the structure of the one-player game is tight enough and intriguing enough to keep you plugging away for a few hours.

We know that beat-'em-up games are the least favourite of *Format* readers, but at £7.99, even if you hate the genre, *Mortal Kombat* represents good enough value to be unmissable.

Revised score: 85%

#### MICROCOSM CD32

Future Zone (Phone your nearest branch) ■ £2.99 ■ AFS8; 87%

In his summary of Microcosm when it first appeared on the CD32, Marcus Dyson said, "I've seen the future and it's awesome!"

Nowadays a decidedly average Space Harrier clone that certainly looks great, but plays horribly is awesome. So awesome, in fact, that the same thing is now happening on newer platforms.

Decidedly average, bordering on atrocious, games

**MICROCOSM:** Right: Much of the background represents what looks like a primordial soup. Below: The SAS were keen to deal with whoever thought Microcosm was good.

40%

are commanding ridiculous prices and, awesome, are being bought by overly-rich, gameplay-ignorant people out there. Awesome!

Certainly, at the new price of £2.99, Microcosm represents much better value for money. In fact, it's probably the price it should have been released at in the first place.

For after all, the awesome graphics are merely pulled off of the CD and have no relevance to the on screen action, except when, in a couple of instances, the player actually gets the choice of whether to turn left or right at certain points. That is the only choice you get.

Sure, it looks great and the rendered full motion video sequences at the start of the game are truly worth putting into a collection of 'Great Gaming Follies of the '90s, but other than that small accolade, Microcosm has nothing going for it whatsoever.

Revised score: 40%

There are some rare gems to be found in the treasure trove that is Public Domain. There are also plenty of rusty old nails. Steve McGill leads us on a journey through his latest discoveries...

# PD Select

If ever there was a time when the technical prowess, enthusiasm, and flair of the Amiga demo crews was needed, it is now. With Amiga Technologies eager to sign up new talent and take the Amiga in new directions and into different markets, there exists a vacuum desperately needing filled.

That the demo crews are capable of filling this gap is beyond question. Even within the limitations of a bog-standard vanilla A1200 they squeeze, cajole, and bully the memory and processor restrictions into producing astounding effects.

With that in mind, rather than stick to our ivory tower here at *Amiga Format*, we chose to scout around and take on board some of the talent who actually help in the creation and production of said demos.

Welcomes are extended to Hollywood of Axis. He's responsible for most of the music in the *Big Time Sensuality* demo and also co-edits one of the better scene disk magazines, *RAW*. The first three demo reviews on these pages are Hollywood's responsibility. We hope you like them.

## PLANET M

### DEMO

By Melon Design  
Ware Freeware  
PD House All good ones  
No of disks One  
Price Ask PD House

*Planet M* won first place at the SIH demo conference in Holland. It is available from the Internet at (ftp) i41s20.ira.uka.de pub/SIH95/mn-pm.dms).

It's difficult to know what to look for in a demo.

PLANET M: Prolific use of strong images and reliance on a funky soundtrack create an entertaining demo.

Should it make you gasp in awe, raise your eyebrows quizzically, or simply make you laugh?

Melon Design's new demo does all three, combining their legendary styliness with a rough but fluid approach that makes the production one of the best seen this year. Designed by Nam/Alex/Groo, the team behind the inspired video-in-your-Amiga, *Mina Omisan*, *Planet M* uses clever digitised images and chunky, stylised pictures and backgrounds to create something that's genuinely entertaining.

It's not so much the number-crunching power of the effects in the demo, more the way they're put it together that's impressive. For example, the sequence with the Melon logo distorting each individual letter towards the viewer, with strange

plasmatic pulses in the background. Strangely, the demo is even a little sensual, especially regarding the subject the group decided to map their famous black and white logo on to this time.

The music is excellent, with dreamy, smooth intro music, and some funky robotic speech in the tranced-up main tune. Above all, this demo is fun. Take a trip to *Planet M* right now, you won't regret it.

## FRUITKITCHEN (AGA)

### DEMO

By The Silents  
Ware Freeware  
PD House All good ones  
No of disks Two  
Price Ask PD House

*Fruitkitchen* is also available from the Internet at (ftp) i41s20.ira.uka.de pub/Assembly95/a95-sile.lha).

An earlier incarnation of The Silents evolved into Digital Illusions – the game designers responsible for the *Pinball Illusions* trilogy. No longer part of the demo group, The Silents reputation now rests on the shoulders of some industrious Danes who, judging by this new production, are carrying the torch well.

*Fruitkitchen* is the follow up to *Soulkitchen*, reviewed in *AF73*. *Soulkitchen* distinguished itself with a phenomenal soundtrack by Scortia and some clever effects. *Fruitkitchen* contains a slightly disappointing (but

PLANET M: This eye represents one of the best uses of digitised video yet seen. It pulsates in such a lifelike manner.

FRUITKITCHEN: Here's an effect. Did you see it?

# PD Selection of the month

## ARTCORE SLIDES

### SLIDESHOW

By Scopex  
Ware Freeware  
PD House 17Bit Software  
No of disks One  
Price £1 plus 50p p&hp

It might seem that we're overdosing on slideshows, but when you see the diversity and

novelty value of the pictures covered within the disks reviewed, you'll understand why.

Artcore presents the user with a novel, verging on impressively stupid, selection method for each of the slideshow's pictures; you travel through a Doom-style corridor complete with animated fans on the wall and select the pictures from there.

Many of them are archetypal muscle-bound, scantily-clad fantasy figures, but one portrait in

particular stands out head and shoulders above the rest - that of an old, wizened Native American. Despite the monochrome hue, he looks so realistic you can almost smell him.

If you find that searching through the corridors is a bit of a bind, the option is always there to run everything from the auto-slide mode. Although doing so means that you will miss out on the hidden area inside the dungeon. Recommended.

**ARTCORE:** The quality of pictures in this month's demo slideshows are testament to the sheer talent in the Amiga scene.

**ARTCORE:** Looks great in print, you should see it when it's illuminated by the Amiga. Big wow factor.

**PIXELSTORM:** Daring to be different, Pixelstorm pushes back the bounds of media counter culture. It works.

**PIXELSTORM:** "It's not like I'm Jesus," said Michael, "but the kids do look up to me."

still good) soundtrack, along with some original vector routines.

However, this release still ends up being a bit directionless. It's not that being conventional is necessarily damning for a demo, but people tend to get bored with the "here's an effect", "here's another one", "here's another!" slapdash school of design. *Fruitchicken* is guilty of this.

On the plus side, there's an excellent *Doom*-style routine, with some nice camera work; you seem to shimmy round corners and at one point even somersault 360 degrees. There's also an extremely clever effect involving the glare from streetlights on a vector road. Not an all-time great, *Fruitchicken* is still worth checking out.

## PIXELSTORM (AGA)

By Asbys  
Ware Freeware  
PD House All good ones  
No of disks One  
Price Ask PD house

*Pixelstorm* is also available from the Internet at (ftp) i41s20.ira.uka.de/pub/Assembly95/a95-pixe.lha)

This AGA slideshow from the excellent German group dares to be different, and succeeds in being refreshingly alternative in its choice of the 10 greatest mouse-drawn pictures, by Toxic and Tyshdomos. Demo 'scene' artists often seem obsessed with dragons, semi-nude women and giant robots, but this release shows that caricature can look just as good when drawn freehand on the Amiga.

Full marks to Tyshdomos, one of the most promising artists seen on

the Amiga for a long time, for properly crediting which pictures were copied/inspired by other artists and which are complete originals. Despite the controversy about this subject, it's always worth remembering that every pixel has still been drawn by the artist in *Deluxe Paint* or whatever. You need talent to do that.

Check out Tyshdomos' Michael Jackson caricature for an example of the great, humorous artwork Abyss are capable of creating. Toxic's pictures are also excellent, being anything from cleverly exaggerated to immorally cartoony.

Most people will probably stick to demos combining both suave pictures and sophisticated effects. But if they want a slideshow that isn't simply dragons dragons dragons or digitised pictures of their (least) favourite sci-fi show, they'd do well to get hold of this.

Funky soundtrack, too.

## ROSSELL SLIDESHOW

By Edd Walters and Roswell  
Ware Freeware  
PD House Online PD  
No of disks Two  
Price 75p per disk plus 50p p&hp

At the approach to the end of any century, it is the historically traditional custom of the sad, the sadly deluded, and the clinically insane to rise up and indulge their paranoid confusion and report sightings of extra terrestrials, unidentified flying objects, unusual occurrences and strange phenomena.

It's a well known maxim that if you repeat a lie often enough, you

**ANACONDA:** "It's got a widget, it's got a widget," sang Conan's alcoholic brother from Aquatonia. Or somewhere.

**ROSWELL SLIDESHOW:** These are genuine pics. Honest!

**ROSWELL SLIDE SHOW:** Extra terrestrials or a bathroom light? You decide.

and other people will eventually come round to believing it wholesale. And that includes people who really should know better.

Take this slideshow as an example. All the pictures are reported as having been taken in New Mexico by Edd Walters (who he?) Just after that little gem of information, there is a statement of the photos authenticity: "Photos have been tested and proved NOT to be FAKE!"

Believers and anyone on the verge of believing will take this as a statement of fact when it is really just a statement of intent. What were these tests? What constitutes a fake? What does the statement mean by 'proved'? Etc, etc.

Nevertheless, UFO spotting is sort of interesting, if only because it provides everyone with good reason

**ROSWELL SLIDESHOW:** Luminous frisbees are brilliant for spooking people at barbecues and the like.

to have a laugh at the believers and their bonkers theories; US Military hush ups, Top Secret Arms, American Government in league with the aliens, Christopher Walken is human, ad infinitum.

For anyone with any sort of interest in the subject, these two disks are well worth checking out. Good luck.

## MARATHON GAME

By Peter De Boer  
Ware Shareware  
PD House Online PD  
No of disks One  
Price 75p plus 50p p&P

In AF75 we looked at a game called *Carnage* that involved the player in a hide 'n' seek 'n' destroy mission against another player inside a relatively large maze.

There were two methods of playing *Carnage*; a split screen using one Amiga, or a serial link version requiring two Amigas and two monitors/TVs.

*Marathon* is incredibly similar to *Carnage*, in that the player is put in

control of a tiny little animated sprite who has to seek out the other player's tiny little animated sprite and kill it.

Unlike *Carnage* though, with *Marathon* the player can commandeer vehicles, drive them around and run over his opponent.

This version, like all Shareware, is limited in scope with only one playing area available. Registree's can expect to obtain for their fee the most up to date version of *Marathon*, the keyfile, and when available, the *Marathon* Editor. Worth consideration.

## BATMAN RETURNS

### DEMO

By The True Darkside  
Ware Freeware  
PD House Mon PD  
No of disks Two  
Price £1 per disk plus 50p p&P  
A strange mish mash of a demo this one. It starts off brilliantly with an overview of Gotham City complete with flare bursts from huge chimney stacks. Then, suddenly, a polygonal

**BATMAN RETURNS:** No, it's actually a subliminal advert for chocolate biscuits. Don't believe me? How about picking up a Penguin and having a break with a Kit Kat?

Continued overleaf ➔

**MARATHON:** A profusion of two-player combat games abound in the Public Domain at the moment. And long may it continue.

**BATMAN RETURNS:** Some of the most atmospheric animation ever seen on an A500 is here.

✦ flying craft of some kind zooms from behind the scene and straight towards the middle distance.

The scene cuts to a huge Gothic building overlooking the city replete with atmosphere and Batman himself looking all moody, menacing, and macho. His cloak flutters in the wind magnificently and then he jumps off of the building in synchronisation with a huge fork of lightning; this man's got class. Then the demo diversifies into standard demo fare; swirling tunnelly dot routines, vector patterns, bouncing cubes with scaled and pixelised animations mapped on them etc.

*Batman Returns* verges on being interesting but ultimately fails. Would have been better if it had stuck to the Batman animations.

### TRAP 'EM

GAME

By \_\_\_\_\_ Paul Clarke  
Ware \_\_\_\_\_ Shareware  
PD House \_\_\_\_\_ 17Bit Software  
No of disks \_\_\_\_\_ One  
Price \_\_\_\_\_ £1 plus 50p p&sp

A true testament to the power of

presentation in a game, *Trap 'em* has been written in AMOS and offers the player a more than engaging method of killing a few hours while having a lot of fun.

*Trap 'em* is a cute one-screen-at-a-time platformer that follows much in the mould of *Bubble Bobble* and *Super Methane Brothers*. The character the gamer controls is well animated, cartoonish and responsive. His task is simple; trap all of the creatures on screen, destroy them with a gun while they are trapped and then reach the exit within a set time limit.

The initial levels introduce the basic premise of the gameplay simply and gently so that the gamer picks up the various subtleties of the creatures'

**TRAP 'EM:** In the vein of *Bubble Bobble* and *Super Methane Brothers*, *Trap 'em* is highly addictive fun.

**BATMAN RETURNS:** Remember kids, if you don't brush your teeth at least twice a day, you might end up looking like this.

behaviour. This helps train your response time for the more difficult levels that lie ahead.

All manner of power ups and bonuses also flit through the screens. If you earn enough money, you can buy bonus items such as speed ups, power traps, extra lives and extra gun power.

*Trap 'em* isn't going to set the world alight, but it is very entertaining and it challenges the gamer enough to earn the tide of addictive with aplomb.

## THE SILICA SERVICE

Before you decide **WHEN** to buy, we suggest you consider **WHERE** to buy and support your investment with a purchase from Silica. With our unrivalled experience and expertise, we will provide all the extra help, advice and new product information you may need both now and in the future. By direct, visit one of our stores, or return the coupon now and begin to experience the "Silica Service".

### 17 YEARS EXPERIENCE

Silica has been established for over 17 years, longer than most other computer suppliers, and has a proven track record in professional computer sales.

### WE PRICE MATCH

If before you make your purchase from a Silica store, you see the same goods offered at a lower price by a local competitor, we will match them on a Same Product / Same Price basis. For customers who order by telephone, we will match other mail order companies prices (including their delivery charges). All price matches are subject to our competitor having the goods in stock.

### WE OFFER DISCOUNTS

To Business, Education and Government customers. For more details, call 0181-308 0688.

### WE SUPPORT YOU

Free Technical Helpline - 0181-309 1111 and Free brochures available on request.

### OPEN UNTIL 7pm

Mail order lines open from 9am to 7pm and last but to 5.30pm. Call your local store for opening times.

### HOW TO PAY

We accept major credit cards, cash, cheque or monthly terms (APR 19.9% - written quotes on request).

### CREDIT TERMS AVAILABLE

3% aviald 12, 24 or 36 monthly payments (APR 19.9% in 30 days) available on orders over £100. Subject to credit check.

MAIL ORDER & HEAD OFFICE: Silica House, Hatherley Road, Twickenham, Surrey, Kent. DA14 4DX

Leading manufacturers of RAM expansions to all major distributors and dealers, are offering an AUTUMN SALE!! of all their products, SLASHING up to 20% off recommended retail prices.

Why not purchase your requirements direct from the manufacturer?

We guarantee despatch within three days

Don't hang around. ORDER NOW!!

	<b>RRP</b>	<b>Our price</b>
A500 Expansion to 1Mb.....	£19.99	...£15.99
Also available with clock .....	£24.99	...£19.99
A500 Plus Expansion to 2Mb	£24.99	...£19.99

	<b>RRP</b>	<b>Our price</b>
External Drive .....	£59.99	...£39.99
(All Amigas)		

	<b>RRP</b>	<b>Our price</b>
A600 Expansion to 2Mb ...	£29.99	...£23.99
Also available with clock	£39.99	...£31.99

## A1200 Ram Accelerator

Uses 32bit, 72 way Simms  
Built in real-time clock  
Optional maths co-processor  
Various configurations

	RRP	Our Price
0Mb .....	£59.99	£47.99
1Mb .....	£99.99	£82.99
2Mb .....	£129.99	£107.99
4Mb .....	£189.99	£157.99
8Mb .....	£309.99	£257.99
33MHz F.P.U (and crystal)	£49.99	£37.99

Also S-port (connect CD32 to Amiga). With CD and networking software £21.99

A1200 internal real-time clock £10.99

Ring for best prices on 30 and 72 way SIMMS, hard drives, modems, mice etc and we will try to beat any genuine deal.  
ACCESS/VISA Welcome. 3 YEAR WARRANTY ON ALL OUR PRODUCTS!!! E&OE. All goods subject to availability

# SERIOUSLY AMIGA

It's all about speed and power again. The star of this month is the Falcon 040 accelerator for the A1200, which can make your machine out-perform a standard A4000.....p92

## AMIGA FORMAT

sneak preview of the English conversion of Germany's favourite 3D program - Maxon Cinema 4D.

If flickering monitors are ruining your eyes, then you'll be relieved to see a review of the ScanDoubler AGA flicker-fixer. We've also got the finished version of InfoNexus 2 and for CD-fans we've got the NEC six-speed CD-ROM drive, CD-Write and a selection of new CDs.

Graeme Sandiford

## FEELING THE NEED FOR SPEED

If this month's 3D feature and the excellent Real 3D Coverdisk has whetted your appetite for all things three dimensional, you'll certainly appreciate the need for serious rendering power.

If you're an A1200-owner, then the Falcon 040 will make it run faster than you might have thought possible. We've also taken a

## REVIEWS

### CINEMA 4D PREVIEW

Graeme Sandiford discovers why Cinema 4D is Germany's favourite renderer.

p91

### FALCON 040 ACCELERATOR

When it comes to producing top-notch graphics you won't get very far with a standard Amiga. Until now, the A1200 has always played second-fiddle to the A4000 in terms of speed, but will the Falcon change all that? Graeme Sandiford finds out.

p92

### SCANDOUBLER AGA FLICKER-FIXER

Interlaced screens are bad for your eyes and can flicker like crazy John Kennedy investigates if this new flicker-fixer for the A4000 works better than aspirins.

p95

### APOLLO

It may not have an 040 chip like the Falcon, but the Apollo 1230 can still make your A1200 run six times as fast. David Taylor puts on his racing gloves and takes it for a spin.

p97

### INFONEXUS 2

Graeme Sandiford sees if this multi-program package can help keep his files in order.

p100

### POWER STITCH 256

Sue Grant brings her rocking-chair into the office to set the mood for this program.

p105

### NEC 6-SPEED CD-ROM DRIVE

While speed may not be everything. David Taylor finds out that sometimes it can help.

p107

### CD-WRITE

Can it really be true - re-writable CD-ROMs? Graeme Sandiford searches for the truth.

p108

### CD-ROM ROUNDUP

Graeme Sandiford finds out which CDs are worth buying this month and which aren't.

p110

# REPAIRS WHILE-U-WAIT!!

# Cinema 4D II

With an easy-to-use interface and some powerful features, **Cinema 4D** is a new 3D animation system about to hit the UK. **Graeme Sandiford** takes a peek.

A brand new 3D animation system is about to hit the UK for the first time. Germany's most popular 3D package, *Maxon Cinema 4D*, will soon be available from HiSoft for £199.99.

But what's so special about *Cinema 4D*? Basically, the same things as *LightWave* – an easy-to-use interface and some powerful features. *Cinema 4D* has an Intuition-based interface that can be opened up on to practically any screen, including Workbench, or a graphics card. Several toolbars are available for easy access to *Cinema 4D*'s features. You can also choose from several viewing modes; either from above, the front, the side, a 3D angle or a combination of all of them (a quad-view).

One of the program's most unique features is its inverse-kinematics system. It can create realistic movements that are properly articulated. Normally, when you create a figure, such as a human, moving the limbs in a natural manner can be difficult because the connection you make between objects is a hierarchy.

Inverse-kinematics enables you to link objects at specific points. Once an object is moved or rotated any linked objects will also respond, but instead simply copying its movements they react in a similar way to how you would expect them to in the real world.

The stunning and colourful patterns in this render are created from just a few coloured pixels.

The glass in the carriage clock illustrates the attractive materials that can be created in Cinema 4D.

Below left: Here's *Cinema 4D*'s highly configurable interface in action.

Below right: It's red, it's slick, it's Ferrari.

Another unique feature is being able to edit an object's texture as if it were an object itself – just like in *Real 3D 3*. In the editor, while in edit mode, object texture or edit object texture axis mode, textures appear to have spheres, tubes or planes depending on which texture mode you have applied to that object. You can then interactively rotate, position and scale the texture.

Textures can also be mirrored, adjusted automatically to an object and positioned at an orthogonal angle to the viewer. This last is useful if you have a texture effect that has to be facing the camera all the time.

When it comes to models the program can load a variety

of formats including *Imagine*, *Sculpt* and *DAE*. These can be converted using a special version of the German object converter, *Castilian*. It also has extensive modelling tools of its own, including splines, morphing, Boolean operators and even a fractal landscape generator.

There are an impressive number of primitives, which you can add to by using the object library feature. *Cinema 4D* also has some special objects such as a figure that is complete with inverse-kinematics arranged, a Sun object, a text loader and an emboss object which creates an embossed relief from an IFF image.

In the animation department *Cinema 4D* uses an intuitive key-framing system. Objects' movements can be recorded to key-frames from which the computer will create the frames necessary to fill in between each key-frame. With features like this and such a simple interface *Maxon Cinema 4D* looks set to take a huge bite out of the UK 3D market.

To find out more you can contact HiSoft on 01525 718181, download the demo version from CIX, or wait for the full AF review in the very near future.

# Falcon 040

**Graeme Sandiford couldn't wait to get his hands on this new accelerator board for an A1200.**

**T**he single most powerful driving force in the computer industry is the need to upgrade. It is this factor that motivates millions of people around the world to fork out vast sums of money so that their machines can be made better and, perhaps more importantly, faster. Every single serious A1200-owner will be drooling at the photograph on this page. This piece of hardware, the Falcon 040 accelerator, has the power to make your A1200 run faster than ever before.

**The reason the Falcon accelerator is so fast is that it uses the same CPU as the top-of-the-line A4000 – a Motorola 68040. This is the chip which performs most of the calculations that the Amiga processes and the faster it goes the quicker your machine performs.**

This board also features an FPU and MMU which help work out floating point calculations and remap areas of memory. So this board is of interest to most Amiga users, especially those involved in processor-intensive work such as ray-tracing, image processing and even displaying animations.

The Falcon 040 won't be of any real interest to games players because it's expensive to buy for just that purpose

and there aren't that many games on the Amiga that will make good use of the extra processing power afforded by the board. Although both *Gloss* and *TFX* run like the proverbial clappers with the Falcon installed.

One of the most frustrating aspects of A1200 accelerator boards is that they rarely fit properly and usually require Herculean feats of strength to fit them. Because the 68040 is that much bigger than a 68020 or even a 68030, I had nightmares about how I would fit such a

monstrously large board and even considered starting a weight-training course. Surprisingly, on arrival the board actually turned out to be quite small and of very high build-quality. The manual claimed that it should fit exactly in to your trapdoor – and indeed it did, with scarcely a molecule to spare of either side. However, the board is slightly thicker than average and, when in the only socket, the SIMM protrudes below the level of the trapdoor. To accommodate this and the forthcoming

The results of the tests are variations on the speed of a standard A4000 040. In most of the tests the Falcon and the A4000 results were almost identical, but on one or two the Falcon has out-performed the A4000 by a large margin.

SCSI-2 interface, a small rectangular section has to cut away from the lid of the trapdoor. This took me some time and was quite fiddly, but fortunately, Power Computing are having some made.

Other than simply inserting the board there is not that much involved in installing it because it mainly auto-configures with only a few jumper adjustments needed if you want to upgrade to a 68060 processor later on.

You can also make sure that your 68040.library is installed as this will give you about a 10-15 per cent speed increase thanks to its 040-specific routines. After that the only reason you'll ever notice that the board is installed is because your machine performs most of its regular tasks preposterously fast.

Unfortunately, this may mean that you'll have some incompatibility problems with poorly-written programs and games, just as you would have with an A4000. But this is a small price to pay for the increase in performance and is largely a problem with older games.

**So exactly how fast is it?** If you want to go by textbook figures, SysInfo gave the Falcon a MIPS rating of 18.67. MIPS means Million Instructions Per Second and gives a reasonable idea how fast a computer can handle calculations.

The Falcon can handle approximately 18,670,000 instructions every second which means it's decidedly nippy. However, this figure is marginally lower than a standard A4000 040 which clocked a rating of 18.84 MIPS. But, you should bear in mind that this is simply a benchmark result that doesn't take normal operating circumstances into account.

AIBB is another benchmark program, which does take into account the Amiga's Operating System. AIBB

## LIGHTWAVE 3.5 RENDERING TEST

The second of the practical tests we put the machines through was a real processor-pumping exercise involving the rendering of a very complicated scene in *LightWave*. The scene, rendered below, contains 25 objects, 119 surfaces, 34 lights, 14 images (used as texture maps) and a total of 52,029 polygons. The scene was rendered

in D2 PAL mode medium resolution (640x480), with memory segmentation set to 1.1Mb (rendered in seven sections), low anti-aliasing and in realistic render mode. The results were quite revealing and a bit of a surprise. The A1230 Blizzard-equipped Amiga took over 15 minutes 8 seconds, which was actually pretty good going.

The A4000 clocked a time of 10 minutes 45 seconds, which is about the speed you might expect. However, the Falcon staged a bit of an upset by rendering the scene in 7 minutes 28 seconds – surprisingly faster than the A4000 which had been tying with it in most of the other tests except for one or two benchmarks. One of the most telling differences in the AIBB benchmark results was the instruction test (1.45) which appears to be a more accurate gauge than SysInfo's speed test which had the machines near identical.

**The Falcon can handle approx 18,670,000 instructions every second, which means it's decidedly nippy.**

gave a similar result from its Dhrystone test, which is similar to the speed test in SysInfo – an A4000 at 1.00 and the Falcon a fraction slower at 0.99. For more information on the results obtained by AIBB have a look at the benchmark results table.

To get a "real-life" idea how fast this board is compared with an A4000 and an A1200 with an 030 accelerator, we performed two practical tests with *Photogenics 1.2* and *LightWave 3.5*. The results and the details of the tests are in the relevant boxouts.

You also need to consider how efficiently an accelerator runs before buying it. A sure test of this is how hot it runs. The 68040 runs fairly hot normally, but the Falcon's CPU was actually quite cool – even when the board was left on constantly for three days it functioned properly without over-heating.

While the board's specifications are impressive, the question remains – is it good value? Well, considering that A4000s will cost over £2,000, you could buy a new A1200 (£400), a tower casing (£350) and Falcon (£500) and build an equivalent system with over £700 spare. As to how it measures up to other cards we'll have to wait until other boards go in to production – I can't wait to see the Blizzard 1260 go head-to-head with 060 version of the Falcon... ☺

## PHOTOGENICS TEST

This test involves Almathera's *Photogenics 1.2*. Three machines were put through their paces; an A1200 fitted with a Blizzard 1230 III, a 50MHz processor and CPU; an A1200 with a Falcon 040; and an A4000 040. *Photogenics* was made to apply a Gaussian blur with a radius of six to a 768x512 image. The A4000 and Falcon's times were near identical with the A4000 finishing in 6 minutes and 37 seconds and the Falcon in 6 minutes and 39 seconds. The A1200 was last with a time of 10 minutes.

## FALCON 040

### DISTRIBUTOR

Power Computing 01234 273000

### PRICE

£499.95 + RAM

### SYSTEM

REQUIREMENTS  
A1200

### SPEED

At the moment, nothing else even comes close to making your A1200 go this fast.

### MANUAL

The manual is a little on the skimpy side, and unfortunately, slightly inaccurate in places.

### ACCESSIBILITY

The Falcon is as easy to install as any other A1200 board.

### FEATURES

It effectively turns your A1200 into a A4000 and the 060 version will make it go even faster!

### VALUE

The board is quite expensive, but still makes more economic sense than buying an A4000.

**"This board will take your A1200 to the limit."**

8MB.....£269.99	32MB.....£799.99

The above SIMMs are 72pin industry standard PS2 70ns.

# ScanDoubler II

**Looking to banish forever flickering video on your A4000? John Kennedy does a double-take at a new Amiga video card.**

**A**miga graphics are unique because they can be displayed on a television or recorded on a VCR with no additional hardware. Unfortunately, this friendly behaviour can also be their undoing, because the video signals which are great for TV are significantly different to those required by standard high-resolution, PC-style VGA monitors.

The AGA chipset was a cost-effective solution to this problem, and the DBLVideo modes (such as DBLPalNoFlicker) provided a signal which was sometimes good enough for display on a PC monitor.

Way back when the AGA Amigas were launched, rumours abounded that an add-on card flicker fixer for the Amiga 4000 was coming "real soon". Amazingly, three years later, it's finally here.

It works too – slot it into the A4000 and all Amiga modes can suddenly be viewed on a VGA monitor via the 15-pin socket. Even better, interlaced displays become rock steady. Picture quality in general is excellent.

Use the card straight out of the box and you may obtain some pretty rosey images. However, take the time to read the instructions and experiment with the banks of jumpers mounted on the board, and everything becomes (literally) clear.

The only noticeable side-effect of using the card is when an interlace display is used. Moving objects, the mouse pointer for example, develop a slight jagged edge. This is unavoidable and is a consequence of the interlaced display, not a fault of the card. Even modes such as SuperHiRes Laced (1440 by 1024) can display pin-sharp text, readable on 15 inch monitors or better – not bad for a computer without an extra video chipset.

## HOW IT WORKS

The ScanDoubler cards fits to the A4000's internal video slot (which is in line with a normal Zorro III slot). This provides access to the raw video signals which are normally piped out to the 23-way connector.

In order to re-transmit the video signal at frequencies suitable for VGA monitors (about 31kHz as opposed to 15kHz for standard video) the ScanDoubler caches the video in its own internal RAM – there is 1.5Mb of RAM provided on the card for this purpose. If the Amiga is working in interlaced mode, two interlaced frames are stored in the video memory and are combined. The new, improved video is then supplied at a rock-steady, VGA-friendly 31kHz.

*If for some reason you have a genuine need to see Amiga graphics on a VGA monitor, ScanDoubler is the only solution.*

Comparing the ScanDoubler to a graphics card can be a painful experience. For the same money you could have a choice of video cards and still have some left over.

The advantage of the ScanDoubler is that it works with the original video modes. There is no emulation, no fancy screen promotion; all the original modes are simply up-rated. No software is supplied at all; this is a purely hardware solution and, as a result, all software is guaranteed to work perfectly. This includes demos, games and the dreaded Guru message.

As a bonus, the ScanDoubler provides composite socket and SVHS video socket too. This means that at last there is a sensible way of displaying and recording Amiga video signals from an A4000 without resorting to a Genlock (or a video card).

Of course, using the AGA screen modes means keeping their

disadvantages too. Displays with lots of colours are deadly slow, and eat chip RAM at a fearsome rate and are limited in the number of colours.

Try running a 256 colour Workbench on a Picasso II and you'll know true happiness. Interestingly enough, the ScanDoubler works very well in unison with another graphics card – my Amiga has a Picasso fitted and the scan-doubled modes simply pass through as normal.

This means I no longer need to keep several monitors on my desk; my SVGA-only display will happily show PAL as well as 1024 by 768. Heaven!

To be honest, being able to display the complete set of flicker-free Amiga video modes is not really a good enough reason to spend a lot of money on this card. It should not be thought of as a true substitute for a video card, rather as an excellent (although expensive) addition.

## SCANDOUBLER II

### DISTRIBUTOR

Power Computing 01234 27300

### PRICE

£399

### SYSTEM REQUIREMENTS

A4000. To display all modes, a monitor with a maximum horizontal frequency of 64kHz and 60Hz vertical.

### SPEED

Rock steady 31kHz for all PC monitors, and up to 64kHz for extra large modes. Doesn't speed up the Amiga itself, only video frequencies.

### MANUAL

Three sheets of paper cover everything, but look tacky.

### ACCESSIBILITY

Plug in and go. Setting jumpers is

tricky and may cause a few problems for technophobes.

### FEATURES

Sorts out all the old problems with AGA and works with games and demos. Good video signal (in overdrive) for recording.

### VALUE

Very pricey compared to a video card such as Picasso II or CyberVision, but nice with it. Some find it essential.

**"Beefs up the Amiga's standard video – but at a high price."**

# VACANCIES

We are currently formulating a freelance team to develop and publish software for the Amiga, PC and Mac computers.

- **Games Software** developing for the Amiga and PC, converting to other formats
- **Multimedia 'Point and Click' Software** titles in development for Amiga, PC and Mac computers
- **Application Software** in-house or commercial application software for Amiga and PC

We are currently seeking people in the following areas:

- Software Engineers**  
Must possess a strong "C" and/or Assembly knowledge with experience with either or both the 680x0 and 80x86 processors. Previous work would be very beneficial (games, scene work such as demos on Amiga/PC etc).
- Artists**  
We would like 2D (DPaint, Brilliance etc) and 3D artists (Lightwave, 3D Studio etc), as well as animators. Previous graphic work in the commercial industry, the 'scene' or in the public domain would be very beneficial.

**Development Teams**  
If you are a development team currently working on games, multimedia or application software contact us for possible joint venture or publishing of your software.

If you think you are interested then contact us as soon as possible. Send examples of your previous work (Amiga or PC disks) along with a CV to the address below. UK or European based applicants only please.

## ACTIVE SOFTWARE

**Personnel Department, PO Box 151, Darlington, County Durham DL3 8YT**

# Apollo 1230 Turbo

New accelerators are all the rage. David Taylor finds a new one that won't hurt the piggy bank. A while ago we looked at the 1220 board from this series. The 1230 is the bigger brother, but it offers more than just a faster processor. And less...

We can dispense with the preliminaries immediately. This is a trapdoor expansion card – you open your trapdoor, make sure the card is the right way up and then slot it home. Well, ram it home is perhaps more accurate (or RAM it even?). It is a very tight fit, but you just have to be confident that it fits and pushes.

There is no software to install in order to use the faster processor. Just turn on and you've now got an A1200 fitted with a 50MHz 030.

In speed tests, it comes out at about twice the speed of the 030 chip in A4000s (which means over six times the speed of the original A1200). As you can imagine, this card is no slouch.

One slight surprise was that this card (and indeed the one we tested) can be bought without an FPU. Now, if you are interested in buying an accelerator that offers the sort of power that the 1230 Turbo does, then what's the likelihood that you're going to do without an FPU?

This card is for serious people using serious applications and some of these programs require an FPU to run. The upshot of this is that you should probably bung another £90 on the price for a decent FPU to go in the glaringly empty FPU slot. And some extra RAM for the two SIMMs is a good idea too.

The card does come with some software and a manual, because it also has a SCSI module that gives you access to SCSI devices. This side of the card is slightly more difficult to fit. The SCSI ribbon fits on to the card easily enough, but then threads through to the spare

In speed tests, this trapdoor expansion card comes out at about twice the speed of the 030 chip in A4000s (which means over six times the speed of the original A1200). It's certainly no slouch.

expansion port that sits on the right hand side of the A1200 (the far left if you look at it from the back).

To get the new port there, you really need to take your floppy drive out from its holding and screw it down. It isn't very difficult to do at all, but might put off some of the more weak at heart. It shouldn't really.

The manual details the software, which is an auto-booting disk, that allows you to format and partition drives so that they can autoboot. This is brilliant, because it means that you can now use an external SCSI device as a first hard drive. Before, you would have

needed an internal IDE hard drive as well, in order to be able to access further devices.

The downside is that the software could do with some tweaking. I had a few problems that were overcome, but did find that some SCSI devices could not be used. (As one manufacturer said, "There's SCSI and there's SCSI – the industry standard isn't that standard".) It wasn't possible to get it to recognise a magneto-optical drive, but, hopefully, it would be possible for a few improvements to be made to give better compatibility.

As it was, it did allow me to use a hard drive, one from Siren Software themselves incidentally, and a CD-ROM.

All in all, this card offers a whole host of possibilities. Extra speed, an FPU (slot!), SIMM slots for more RAM and the addition of some SCSI devices. It's very cheap considering this, but remember that you're going to want to get the extras too.

## APOLLO 1230 TURBO

### DISTRIBUTOR

Siren Software 0161 7965279

### PRICE

£289.99 (£89.99 68882 MHz FPU, 4Mb RAM SIMM £129.99)

### SYSTEM REQUIREMENTS

A1200

### SPEED

It's fast, damn fast, but the FPU version will be even better.

### MANUAL

A very comprehensive guide to the SCSI side, but some details on the fitting would have been better.

### ACCESSIBILITY

Not difficult – as easy as it could be, but it may worry the more nervous user.

### FEATURES

All singing, all dancing – everything a card for the A1200 could offer.

### VALUE

Very cheap, but don't forget to work out how much more RAM and an FPU will cost.

**"Excellent value for money, but with a few minor shortcomings."**

# The Fall & Rise in Amiga Frame Grabbing...

ProGrab™ has caused a Real Fall in the Price of Quality Frame Grabbing - the Rise in Standards speak for themselves!

The revolutionary NEW S-VHS ProGrab™ 24RT Plus, with Teletext, is not only the best way to get crisp colour video images into your Amiga, it also costs less than any of its rivals. This real time, PAL-SECAM-NTSC\*, 24-Bit colour frame grabber/digitiser has slashed the price of image grabbing on the Amiga, and at the same time has received rave reviews for its ease of use and excellent quality results. ProGrab Plus™ is now S-VHS compatible too!

ProGrab™ has received honours from just about every Amiga magazine! And... with ProGrab™ you needn't be an expert in Amiga Video Technology either...

A simple 3 stage operation ensures the right results - Real Time, after time.

## STAGE 1...

Select any video source with S-VHS or composite output. This could be your camcorder, TV with SCART output, satellite receiver, domestic VCR/player or standard TV signal passing through your VCR/player... the choice is yours.

## STAGE 2...

With ProGrab's software, select an image you wish to capture using the on screen preview window - and Grab (because the hardware grabs frames in real time, there's no need for a freeze frame facility on the source device). ProGrab™ even includes a Teletext viewing/capturing facility from either TV or satellite sources. Once grabbed, simply download and view the full image on your Amiga screen.

## STAGE 3...

Use the image with your favourite word processor, DTP or graphics package.

Grab images with your camcorder including S-VHS

Take a signal from a TV with SCART output

Use a satellite receiver as your output device.

Grab TV or video pictures from your VCR's video output including S-VHS

**ProGrab™** ... supports all recent Amiga's and is also fully AGA Chipset compatible. You can even work in the new graphics modes up to 1472 x 512 pixels in HAM & (Amiga B&B) palettes. Images can be saved in 24-Bit, 18.7 million colours.

**ProGrab™** ... supports PFI, ILM, ILM24, Clipboard, PFI, B&B, PFI, TIF, ProGrab™ File and Amiga File output formats. All these formats can now also be read into ProGrab™ directly too. A range of image processing effects, palette computing (AGA only) and dithering computers are also new to ProGrab™ V2.5. ProGrab's fully supports ProGrab's with a custom Loader to enable grab directly from within the program using VCR's.

**ProGrab™** ... software has built in image and colour animation facilities. The number of frames is dependent upon your Amiga's RAM.

**ProGrab™** ... includes 2.5 software now available. \* Support for Virtual Memory, allows the highest resolutions - even with low memory Amiga's (all Hard Drive Systems without the need for an MMU, requiring just 1Mb. Hard Drive Space). \* Additional Teletext Facilities... Now available with Teletext TV set too. \* Larger Preview Double resolution & 4 times as fast as standard support. \* New works with composite PAL, SECAM and NTSC straight from the box.

### For just £129.95

ProGrab™ is supplied with everything you'll need.

- **ProGrab™ 24RT Plus Digitiser** (with power & composite video input leads)
- **New Version 2.5 Software**
- **Parallel Port Connecting Cable**
- **Main Power Supply Unit**

ProGrab™ optional PCMCIA interface can extend performance even more for the serious/professional user.

- **PCMCIA Interface for A4001 and A1200s only £29.95**

giving FASTER operation...

- **Fast Downloading Times** (up to FIVE times quicker)
- **Improved animation speeds** of up to 11fps (mono) and 3.5fps (colour)
- **New sound sampling and animation capabilities** (separate sound sampler required)
- **Save animations** direct to your Amiga's hard drive

A file manager  
and database for  
under £30! Graeme  
Sandiford checks  
what's hiding under  
the 'floorboards' in  
this dream bundle.

# InfoNexus

No matter what serious use you put your Amiga to the one thing you can be sure that your programs will do is generate files. Whether it's text, images, or music that your programs produce, it's no good spending hours on a project if, in the end, as soon as you switch off your machine the fruits of your labour are lost.

The trouble is that while being able to save your work is an essential part of modern computing, it can cause more

**InfoNexus 2's** interface may not be to everybody's liking, but there is no doubt that it is very functional.

**The Image Browser** makes finding the picture you want a lot easier.

than a few headaches. Trying to keep your files organised on a floppy-only system is bad enough, but once this relatively contained chaos is unleashed on to a hard disk things can very quickly get out of hand.

This is why file managing programs are an essential part of most people's software collection. However, file managers can do more than simply help keep your hard disk tidy by moving files around, they can also be used to give you a clear indication of the nature of a file. Most file managers can now show pictures, animations and play sounds.

**InfoNexus 2** is the latest version of Optonica's file management system and, at the moment, is being distributed with a free database - **DataNexus**.

The release of **InfoNexus** has come at an interesting time as some Directory Opus-users are a little disgruntled with version 5 of the program. If **InfoNexus 2** is up to scratch, it just might convert a number of Opus-users.

One thing that is immediately obvious is that the interface of the program has hardly changed at all. I must admit to not liking the appearance of **InfoNexus**'s interface and preferring the clean and sharp Workbench 2 look of Opus 5 over the custom-styling of

**InfoNexus**. However, this interface has one distinct advantage - this product is compatible with Workbench 1.3.

While I dislike the physical appearance of the program, which is purely a matter of personal taste, it is constructed logically and looks a lot less cluttered than Opus 5 tends to appear.

Although not as configurable as Opus 5, it is possible to alter the programs appearance by changing it's colour and it's highlights to make it look a little sharper and cleaner. One of the unique features of **InfoNexus**'s interface is it's Pop and Roll menus which enable quick and easy access to menus - wherever the pointer is on screen clicking on the right-hand mouse button will bring up a bank of menus.

So what's new in version two of **InfoNexus**? It still has features such as Data Type viewing, playing CDXL animations and its excellent network support, but now has several unique and important new features.

Perhaps the most visually appealing of these is its Image Browser function. This tool will create thumbnail images of any picture files contained in a directory, so that you can tell at a glance what the images look like. Initially, this is quite a slow process, but once it has been performed, a catalogue is kept in that directory so that it can be read quickly. To view an image at full-size you can simply double-click on its thumbnail.

Another graphics-related new feature is Dynamic Typing. This is similar in function to Opus 5's File Sniffer - it lets you know what kind of files are in the list. However, where Opus only types this information in the list, **InfoNexus 2** will display small icons that match the file type. The advantage of this is that you can tell at a glance what kind of file you are looking at.

Surprisingly **InfoNexus**'s Dynamic Typing is actually quicker than Opus' Sniffer. In fact, **InfoNexus** is generally quicker at reading directories than Opus.

**InfoNexus 2** now has support for file types. This is the same as Opus's function - it can be used to identify different types of files through their extension or binary information.

Once a file type has been defined, you can specify a certain action to take place when that particular file type is double-clicked on.

Whether or not more people will prefer **InfoNexus 2** over Opus 5 is hard to tell. As with Opus 5, I'm sure that some people will be put off by the program's

# EXUS 2

interface. However, once they take the effort to explore its features they will be rewarded with several useful features and a powerful file manager. However, *InfoNexus 2* is still not a match for *Opus 5's* power and incredible configurability, but it's certainly getting there.

## DATANEXUS

Right, on to *DataNexus*. Since *DataNexus* is being bundled with *InfoNexus*, many people may not take it very seriously and that would be a big mistake because *DataNexus* is a fully-featured package in its own right.

The two programs share a great deal in common, including their Envoy support and also, unfortunately, the same interface style. As with *InfoNexus*, its design makes it very easy to use, even in low resolution. In general operation *DataNexus* is much like any other database — you lay out your database and then enter the data for each field in a record.

*DataNexus* has a surprising number of different types of fields, including text, number, date and time.

Aside from these, the program has

**ABOVE LEFT:** *InfoNexus* has extensive support for image file formats and display 24-bit images even on ECS Amigas (A600s and A500+ss) quite well.

**ABOVE RIGHT:** Pop and Roll menus are a unique and very useful part of *InfoNexus'* interface.

calculation fields capable of performing relatively complicated computations, serial fields for automatically creating serial numbers such as those for club membership, summary fields for totalling up, or averaging field values and external fields. External fields are similar to the ones in *Twist 2*, but not only can they be used to display DataTypes, they can also play animations, music modules, samples and CDXL files.

The program also has an extensive, but very easy to use, search tool. This tool enables you to add logical operations, such as search criteria, by

simply clicking on them. *DataNexus* also has several other useful features and nice touches that make this a surprisingly good program.

While this program does not possess the raw power of database programs such as *Twist 2* or *Superbase Pro*, it can certainly match them in terms of ease-of-use and is the ideal complement to *InfoNexus*. For under £30 these two programs represent exceptional value and, while they are not the most feature-laden examples in their markets, they should be more than adequate for most peoples' needs.

*DataNexus* comes absolutely free with *InfoNexus 2*, but is still a good program in its own right.

## INFONEXUS 2

### DISTRIBUTOR

Optonica 01455 558282

### PRICE

Until the end of November £24.99 to Format readers. Normally £29.99.

### SYSTEM REQUIREMENTS

1Mb of RAM, hard disk recommended

### SPEED

Both programs are surprisingly fast at both sorting files and reading directories.

### MANUAL

The manuals are clearly written, have plenty of tutorials and meaty reference sections.

### ACCESSIBILITY

Both products are extremely intuitive

to use and have a relatively high degree of configurability.

### FEATURES

There are more than enough features to meet the needs of the average user.

### VALUE

The Amiga's second best file manager and a database program for 25 quid has got to be one the best value bundles around.

**"All the software you need to organise your hard disk shortcomings."**

The **essential** magazine for Amiga enthusiasts

# AMIGA SHOPPER

## Picture perfect!

You want a monitor for your Amiga, but don't have a clue which one is best for you? Just read our monitors Superstest this month and all your questions will be answered. We tell you exactly how a monitor works, we review nine of the best monitors around and we give you some top tips for using a monitor. Read this before you spend your hard-earned cash!

## Super storage

If you want to get more serious with your Amiga, a single floppy drive won't get you very far. Amiga Shopper investigates all the latest ways you can store your data and reviews all the drives we could lay our hands on. Don't miss our top tips to solve your storage problems.

## Public Domain

We've given PD Select a facelift this month. Nick and Dave have contacted over 100 PD libraries to find the best available programs to

review. And they've come up with a bumper crop. We've also included Licenceware and Internet sections too - from now on these will be

featured every month. You'll find the list of PD houses and the User Groups on the Coverdisks.

## Disks

We have two complete packages for you on our Coverdisks this month. First is HiSoft's excellent programming language, BASIC version 1. Then we have introducing Workbench, one of F1 Licenceware's most popular programs ever.

And don't miss our money-saving HiSoft offers.

## There's more

By the time you read this Amiga's will be back on the shelves again. We give you the low-down on the prices and the software bundle in our special news report.

Plus! We have a brilliant competition to win a Canon BJC-600E printer, worth £450.

Amiga Shopper **November** issue on sale **NOW!**

This one is especially for Bill Eaves of Caitness, who pointed out in his letter in *AF75* that we hadn't taken much notice of cross stitch programs available for the Amiga, although they are regularly advertised in *CrossStitch*, one of our sister Future Publishing titles. In fact, the last time *Amiga Format* reviewed a cross stitch program was way back in *AF52*, where we put *X-Stitch Designer v3* through its paces – so we thought it was about time we had a look at another one.

Producing your own original charts for your cross stitch designs can be extremely fiddly and time-consuming. You have to be very accurate too – if so much as one square of colour is in the wrong place, it could ruin your

With a certain amount of artistic talent and a little time you can create gorgeous designs – unlike this sad effort!

# Power Stitch 256 Plus

**Sue Grant shrugs off her hard nut reputation, unlaces her boxing gloves and gets stitching.**

completed picture and result in a lot of frustration and unpicking.

Having a program on your Amiga that plots your chart for you can only be a bonus. *Power Stitch 256 Plus* does just that and is an upgrade to *Power Stitch 256* which was released last year.

To attempt to reproduce a picture on a chart by hand requires skill and patience and plenty of graph paper, but this program makes it all very simple. Producing your own design is easy – except that a little artistic talent goes a long way and I missed out on this virtue – as you can see from my pathetic attempt to draw a woodland scene!

A real bonus is the fact that you can use IFF files and quickly turn them into cross stitch designs – just choose your image, load it in and away you go. Loading an IFF file of Peter Pan (see pic) took a while, but took a lot less time and hassle than converting the picture into stitches by hand.

There's no shortage of IFF images you can load in to the program, either – there are thousands of them in the Public Domain.

You can also create IFF picture files from your stitched designs.

All the stitches you need are here, including cross stitch, backstitch,

Producing great designs is easy. *Power Stitch* gives you the option to convert IFF images into cloths.

knots and beads and a wide range of colours for yarn are already installed. You can edit these colours to match manufacturer's yarns and alter their screen representation. You can also create your own symbols to represent different-coloured stitches on the final printed chart – useful when using lots of different shades of a colour.

Trying to produce a motif of some text was more complicated. I advise anyone without a hard drive to get one, I was using the only Amiga in the office without one and it was a right pain swapping disks all the time.

Another new feature of this upgrade is making borders. Creating a border is simple. Just design your corner piece and a small portion of the horizontal and vertical border, then all you do is grab the bits you want repeated and the software does the rest, producing a nice neat border around the edges of your cloth.

There were a few programming glitches and my Amiga crashed a couple of times while I was running the program, but on the whole *Power Stitch 256 Plus* was well structured and simple to use.

**80%**

# NEC 6Xi

**A**lmost before people have got used to the idea of quad speed drives and certainly way before they've become considered as standard, we've now got a six speed drive knocking on the door. The problem with faster CD-ROM drives is that you often don't notice the difference between them and even a single speed drive.

This drive is an internal SCSI drive, so you need a box Amiga with a SCSI controller to use it. Many external CD drives are just internals placed in a generic casing, but that isn't on offer with this drive. So if you're an A1200 owner, you'll need to also have the HiQ PowerStation, or a suitable case.

Fitting the drive inside your machine is easy enough. All you have to do is attach the SCSI ribbon and the power cable. Since you can't put either of these in the wrong way around, you've got nothing to worry about.

Should you have another CD drive or other SCSI devices, you may need to adjust some of the jumpers on the back. With these tiny switches you can adjust the SCSI ID number and turn termination on/off. If you do end up with two SCSI devices on the same ID number, you'll get a conflict and your machine won't boot properly.

With the hardware set up, it's a simple case of setting up the software. If you've installed a drive before, you'll have everything you need and can just make a few adjustments to the mountlist. If you haven't, then you'll need to get hold of some PD software, because the drive doesn't come with any.

**If you're an A1200 owner, you'll need to also have the HiQ PowerStation, or a suitable external case, if you are to use and benefit from this six speed CD drive.**

Loading a CD is a bit of a step back in time, because instead of a tray loader, you have to put the CD into a caddy and load that. To put the caddy in, you need to pull down the cover, which can be locked open, so that you don't need to keep messing around.

For the majority of people a dual speed drive is sufficient. You need to be constantly accessing CDs or have some special needs to consider a faster drive. If you are a heavy user and have a fast controller, you will notice a difference between this drive and dual speeds.

Although directory scanning is faster, copying files does not practically

**Another step forward for CD-ROM technology, but just how quick a drive do you need? David Taylor finds out.**

turn out to be six times as fast as single speed drive. With multiple small files, the difference is reasonable, reduced because of the time it takes to initialise the copy each time. The sustained transfer for larger files is pretty good.

Of course, it's not often that you want to copy 20Mb CDXL files from CD, so just how important is that speed to you? If you do want to copy a file that size, it's likely to be so rare that you can afford to wait. On the other hand, if you can, on average, cut your CD accessing time in half, then I'm all for it.

Whilst you should be able to play audio from this CD, there are a couple of obstacles. Firstly, you can't link up the audio outputs from the back, so you'd have to use the earphone socket. More importantly, I could not find a software CD player that was compatible.

I tried my five favourite SCSI CD players and some others from Aminet, but none of them managed it. One got as far as recognising the number of tracks and play time, but bottled out at the last minute and failed to play.

This CD is therefore a bit of a mixed bag. It costs more than a dual speed and for normal users I wouldn't say it was worth the extra. But for high-end users, who don't want to have to hang around when accessing, it's not that expensive. You will notice the difference. As far as the audio is concerned, if you're forking out £300 for a drive, you're probably not doing it to listen to the latest Blur CD.

## NEC 6Xi

### DISTRIBUTOR

First Computer Centre 0113 2319444

### PRICE

£312.99

### SYSTEM REQUIREMENTS

SCSI controller for internal SCSI devices

### SPEED

Mmm. It might not be six times as fast in practice, but I'm not swapping back to single speed until I have to.

### MANUAL

One sheet of A4 with the jumpers explained. No additional information on how to set up a CD drive for Amiga novices.

### ACCESSIBILITY

The hardware itself is pure simplicity

to fit. Getting any CD drive running requires some work with the software, but shouldn't baffle you.

### FEATURES

Audio CDs should work. It's the Amiga's fault not the drive's.

### VALUE

Over a hundred pounds more than a dual speed, but still not outrageous.

**"If CDs are your life and passion, this is fast."**

**85%**

# CD-Write

Graeme Sandiford looks at a new CD-ROM system that's been generating a great deal of interest lately...

This product has generated the most enquiries from readers than any other since the advert appeared. Who wouldn't want to find out more about a software system that enables you to write to CD-ROMs!

CD-ROM technology is an integral part of Amiga computing both on serious and games levels and being able to write data to CD would provide users with lots of additional functionality – anything from removing unwanted files from sight, to updating CDs and customising CD-resident programs.

Of course, being able to write to a CD-ROM using a standard drive is impossible at the moment and if most people had read the rest of the advert they would have noticed the phrase "virtually write". *CD-Write* gives you the benefits of writing to a CD without doing so physically. The manual goes to great pains to explain the principles behind read-only media and re-writable media, so even novice Amiga-users are able to understand how this product works and what it can do for them.

**So how does** this marvel of modern technology work? Well, there's a big clue in that one of its system requirements, as well as Workbench 2+, is a hard drive. The *CD-Write* filesystem is one of re-direction – a bit like virtual memory where data is re-directed to hard disk rather than real memory. However, in *CD-Write*'s case, instead of your machine being fooled into thinking that hard disk space is memory, it uses a buffer directory to make it think that areas of your hard disk are part of a single device – a virtual CD-ROM.

On installation, which is simple, you are asked to specify a modifications directory where the details of any changes you have made to a CD are stored. Each time you make a change a new sub-directory is created and named after the disc's creation date and its name. An important point to remember is that it is only the changes that have been made to a CD not changes to the files it contains that are stored. The difference? If only the changes to a file were stored this would save on hard disk space. *CD-Write* stores literal changes made by programs.

To clarify this here's an example: if you were to load an object into LightWave, add a surface to it and save the altered object then

Unfortunately, altering files such as 3D objects results in the creation of another file of the same size.

data stored on your hard disk would be the literal data saved out by LightWave – the whole object plus the surface added. If only the differences were stored then only the surface data would be stored and therefore take up less space.

However, while this would make a better and more economic system it would be a more complicated and slower-working filesystem to create. But it is a feature that would make the best use of this idea. As it is, because it uses the same amount of hard disk space as copying files to hard disk and

modifying them, the only benefit of the *CD-Write* system is ease of use. Once installed, *CD-Write* is transparent – each time a CD is mounted a second re-writable icon and logical device is also mounted suffixed with characters of your choice. This device is then recognised by any program and data can be modified as normal.

While this is a great idea, it hasn't been implemented as fully as it could be and really is of use only by those who prefer convenience over having £40 to spend elsewhere.

Whenever a CD-ROM is inserted two icons appear – a normal one and one for the virtual CD.

## CD-WRITE

### DISTRIBUTOR

PDSoft 01702 466933

### PRICE

£39.99

### SYSTEM

**REQUIREMENTS**  
2Mb RAM, a hard disk and Workbench 2+

### SPEED

Reading directories can be a little sluggish at times, but not very.

### MANUAL

Not only does the manual cover the program's features well, it explains the principals behind it.

### ACCESSIBILITY

Extremely easy to install and completely transparent in use.

### FEATURES

The program has failed to make the most out of a good idea.

### VALUE

Over-priced, but hey, I guess it's the only one of its kind.

**"The only real advantage CD-Write has over copying things from CD to hard disk is ease-of-use."**

**79%**

## World-Info '95

PD Soft ■ 01702 466933 ■ £TBA

World-Info '95 is intended to be a virtual guide for the world and includes interesting information on just about every country. This includes things such as climate, population growth, average life expectancy and natural hazards.

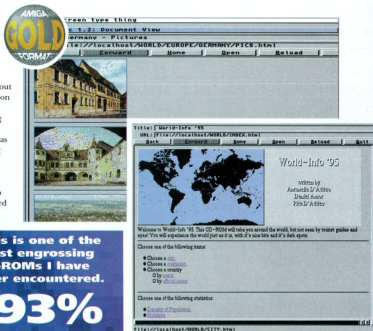

Cunningly, the producers of this disc, three enterprising students, have used the HTML document language to store the database of information, which means that *AMosaic* acts as an interface and that the CD can be used on any computing platform. This makes using the disc intuitive, especially for those who frequent the World Wide Web.

However, this does mean that you need to have an installed copy of *Mosaic*, which on the Amiga means you also need MUT installed. It is a shame that these were not supplied on the CD, but I suspect that this is because of the huge amount of space the data has taken up.

The main menu enables you to choose between English and German and to search for a country by continent, name or by city. It is possible to browse world statistics such as mountains, population, telephone access codes and geographical size. There are simply too many interesting features, such as a basic vocabulary for several languages, to mention here. Put simply, this is one of the most engrossing and excellently presented CD-ROMs I have ever encountered. ☺

This is one of the most engrossing CD-ROMs I have ever encountered.

# CD-ROM

## AmiNet 7

PDSoft ■ 01702 466933 ■ £12.99

The AmiNet has long been an excellent place for artists to show their work.

Yet another very good offering from the AmiNet.

83%

AmiNet 7 includes the full version of *Personal Paint 2.1* and a demo of 6.3.

**A**miNet 7 follows the same format as its predecessors – the same as the Internet site itself. It might have been interesting if the interface had used *AMosaic* too to complete the feeling of being on-line. However, the CD comes with an *AmigaGuide* formatted document that does a better job.

Since the files on the AmiNet disc are archived the *AmigaGuide* can be used to not only view descriptions of a file or program, but to de-archive them as well.

The contents of this volume are actually stronger than the previous one, with more new files, especially in the comms directory. There is the usual selection of utilities, demos, music modules and info – although I was a little disappointed not to find much in the way of 3D objects and pictures.

On the whole this is a good disc with a surprise inclusion of *Personal Paint 2.1*, but it would have been better released in a month or two's time. ☺

# The Grolier Electronic Encyclopedia

EPIC MARKETING ■ 01793 490988 ■ £26.99

consists mainly of three large icons that enable you to explore the information in the Encyclopedia in three ways.

The Topic Tree is the first and is the one to use if you want to look for information by subject. The subjects are Geography, History, Science, Society, Technology and the Arts. Each of these will take you to further sub-menus that become more and more specific until you reach the articles themselves. An article is an entry on a given subject and not only contains text, but has pictures and hotlinks to other articles as well.

The FactFinder is basically the search engine of the program – you can type in any word and ask it to search articles for each occurrence. When you get to the article, the keyword will be highlighted each time it is mentioned in the article and you can skip from one mention to

another. It is also possible to extract text from articles. The Picture browser is simply used to view pictures.

However, it is not only the excellent way this CD-ROM is organised, it's the little extra touches, such as the friendly-sounding American voice that explains its functions and the ease with which you can navigate through the encyclopedia. In short, if you have a CD-ROM drive and the vaguest of interests in the planet, then get this CD.

As you may have guessed from the spelling of its title, this CD-ROM is an American Encyclopedia. It is a product that has been popular on the PC for a number of years and has taken a surprisingly long time to be converted for use on the Amiga. It seems that this wait has been worthwhile since the result is a highly polished product indeed.

The main menu of the program

The encyclopedia has plenty of colourful images like this.

These buttons are used to navigate through articles.

Find out about the place we all live in – get the Grolier encyclopedia.

# Round-up

## Makin-Musik

CD Exchange ■ 01603 261060 ■ £24.99

Makin-Musik is, rather unsurprisingly, a CD full of files and tools for making music on your Amiga. The disc contains several sequencers and composing programs, including demo versions of OctaMED 6, Aural Illusions, MusicX and NotatorX.

There are also several utilities for editing samples, ripping them and handling Midi files – not to mention the biggest collection of AudioCD players around.

However, the thing that really makes this collection

This is one of the many musical utilities on this CD.

Aural Illusions v1.02 © Blackford

As well as several PD music programs Makin-Musik also has demos of several commercial programs, such as Aural Illusion.

special is an enormous collection of top-quality sounds from Akai, supplied in both 8-bit IFF and 16-bit Wav formats.

The instruments included cover all of the ones I have ever heard of (and plenty I haven't, including some nice Japanese, Chinese and Indian ones).

If you are looking for a CD for creating music, you'll be hard pressed to find a better choice.

Making sweet music on your Amiga has never been easier.

92%

## ZOOM ACTIVE SOFTWARE ■ 01325 352260 ■ £19.99

This CD could best be described as an old-style PD CD-ROM, but this hasn't stopped it from having a bang up to date and innovative interface. Well actually it's quite simple, all you have to do is scroll down a list of the disks from the library. Clicking on a disk will bring a description of its contents. If it sounds interesting, you can un-DMS it by clicking on Extract.

The content is quite varied as the disc covers the combined software of Active Software and Ground Zero libraries released between the December '94 to July '95 period. This is a good buy for anyone wanting to get their hands on a huge chunk of recent Amiga PD.

83%

**A powerful set of cataloguing tools.** Catalogue your Record, CD, Video and disk collection with ease, and search on any aspect or field. Suitable for use with Kickstart 2 & 3 only. Only £5.00

Over 7,000 top quality colour images. Subjects include: cats, avatars, animals, people, hi-tech, space, cars, boats, flowers, nature, sports, pinups, boats, towers, plants, seasons, trees, technology, raytraced, cartoons, fantasy, art, reptiles and dozens more subjects. The perfect CD for presentation, and Desktop publishing work.

**TIME TABLE OF HISTORY** (C0129) £14.99

This original time table includes over 6,000 stories covering events in business, politics and media from the Trojan horse to Desert Storm. Stories are linked to exciting multimedia effects, including hundreds of graphics, sounds, maps, & charts. Every word of every story is hot-linked to all other stories with the same word. Just click & go. Another superb multi-media encyclopedia.

**ADULT SENSATION** (C061) £19.99

Adult Sensation Volume One contains over 4,000 high quality photographs of glamour models of various poses to take your months to ponder. Only available for humans over the age of 18 and under the age of 65.

**ILLUSIONS 3D** (C064) £9.99

Create your own fascinating 3D stereogram images. Contains numerous tools as well as hundreds of pre-rendered 3D images, hundreds more for you to render your self. Very easy to use.

**THE SPACE SHUTTLE** (C0138) £19.99

Includes over 3000 high quality colour images and over 3700 effect documents covering every Shuttle mission. Delve into the history and excitement of The Space Shuttle Shuttle.

**ARCADE CLASSIC** NEW!!! (C076) Now £14.99

ArCADE Classic is an original collection of ALL your favourite arcade favourites, including: Amiga & PC versions of PACMAN, SPAN INVASIERS, ASTEROIDS, MISSILE COMMAND, PENSO, FRODOG, LION RUNNER, GALAXIANS, DONKEY KONG, NUMEROUS TETRIS GAMES, BATTLZONE, COMBAT, THON, SPACE WARP, THURST, OBERT, HUNCHBACK, MOON PATROL, TRAIL BLAZER, BREAKOUT, CENTREPIECE, CYCLES, BEZEPK, SNAKI, SCRAMBLE, PING PONG, BREAKOUT, NUMEROUS C64 CONVERSIONS. A COLLECTION OF JEFF MINTER GAMES AND HUNDREDS MORE. Over 6000s of unforgettable retro-gaming. This CD will keep you busy for months!!! Floppy drive required, Keyboard recommended.

**THE EPIC COLLECTION** NEW!!! (C0160) £39.99

Contains our most popular floppy based software titles on one giant CD-ROM. Now you can purchase the entire Epic collection in one go. This compilation contains hundreds of megabytes of Amiga software, subjects include: Amiga & PC versions of clipart, numerous 3D objects for Imagine & Lighwave, Colour, Bmp, Compugraphic fonts & Adobe fonts, Graphics converters, Music tutorials, Beginners guide, 3D stereogram generators, Hundreds of Sound FX and samples, Virus Killers, Hard disk installer & tools, Various Hardware projects, A number of classic demo's, Hundreds of games including Shoof up wps, Mine teasers, Puzzle, card, arcade and board games. The latest Assassins games & the latest LDI utilities are also included. Dozens of Emulators are included. The Epic collection CD-ROM is updated monthly, and user updates are available to registered users for as just £9.99, this means you can have the very latest range of software regularly without having to keep purchasing new CD-ROMs. You simply return your Epic collection CD-ROM, we'll update it and send it straight back to you. It's as easy as that. \*Supplied with printed index booklet.

**STAR TREK MULTIMEDIA GOLD** (C064) £27.99

A superb CD-ROM for all STAR TREK fans, contains Hundreds of graphic images in IFF & GIF from the very first series to the very latest (colour & mono), films/series. Dozens of IFF and WAV sound samples are also included as well as the Next Generation & Original Star Trek Theme tunes. Also includes dozens of Star Trek animations in both Amiga and FLI & a number of Star Trek games for the Amiga & PC are also included. UPDATED VERSION

**C64 SENSATION "Blast from the Past"** (C0120) £19.99

Features hundreds of all-time classic C64 games. Over 10,000 Commodore 64 Megademos, over 3000 of classic C64 game tunes and loads more.

**GROLIER ENCYCLOPEDIA** Version 2, (C046) Special £26.99

The Grolier electronic Multimedia encyclopedia contains thousands of pages of information on every subject, with Thousands of great colour photographs and illustrations and hundreds of sound clips from the BBC. This CD-ROM is an essential purchase for all CD-ROM users. Includes high quality desktop video clipart, and more.

**DESKTOP VIDEO CD** (C068) £14.99

The Professional Desktop Video CD-ROM contains hundreds of top quality anti-photographs and illustrations and hundreds of original backdrop textures, symbols, 3D objects, desktop backgrounds, high quality desktop video clipart, and more.

**THE SPACE SHUTTLE** (C0138) £19.99

Includes over 3000 high quality colour images and over 3700 effect documents covering every Shuttle mission. Delve into the history and excitement of The Space Shuttle Shuttle.

**EPIC MARKETING (AUSTRALIA)**

If you live in Australia or New Zealand you can now purchase any of the above CD ROM titles from our Sydney based warehouse. Send your order or enquiries to: **EPIC MARKETING (AUSTRALIA) PO BOX 5050 NEWCASTLE NSW 1590 Australia** For a free trial phone send a SASE. For prices in NZ/CD ROMS simply add the UK £100 phone costs.

# Workbench

Life is full of mysteries and the Amiga is certainly no exception. Graeme Sandiford knows all about the quiet strength and willfulness of his "favourite" machine. So, send your queries to Workbench, Amiga Format, 30 Monmouth Street, Bath, Avon BA1 2BW.

## SURFER DUDE

1. I want to be a 'Net-surfer', but I have limited funds and need a cheap modem. Yep, you guessed it, what shall I buy (for about £100)?
2. What is my local BBS (B'ham)?
3. On the TV they say their e-mail address is Compuserve whatever @ blah, blah, blah. Does this mean I can only contact them on Compuserve or can I use my local BBS?
4. Should I join CIX or Compuserve, as well as my local BBS? I only really need it for sending e-mails and sending/receiving faxes (and for a bit of fun).
5. What are the phone bills like (BT) compared with the local BBS and CIX/Compuserve. Does it cost per minute or according to how much data you load?
6. Can I put my own stuff on the BBS or CIX/Compuserve?

George  
Birmingham

What? Another person trying to get on the Net. When will it all end - I already get enough grief from my mum trying to get on all the nursing newsgroups? Well if you do insist on joining the information superhighway, then the first thing you'll need to bear in mind is that faster is better and nearly always works out cheaper in the end. Faster modems usually pay for their initial expense quite quickly through reduced phone bills.

As it happens, we'll review the Harmony modem from OnLine PD next issue. Not only does it operate at 28,800 bps and supports the V.34 protocol, it also comes with a nice bundle of software to get you started in the world of comms, which is rare because most modems only come with PC software. You might also like to check the box overleaf, explaining what you need to get access to the Web.

2. I have no idea.

If you are going to visit the World Wide Web sites in your Cyber travels, you'll need a fast modem.

3. I'm afraid it is most unlikely that you'll be able to contact them through your local BBS. Compuserve offers both Internet access and e-mail. The fact that Compuserve's name is in the address simply identifies them as the providers for the company. CIX also has an e-mail service as do all Internet providers - all can be used to send e-mail to any address.

4. Joining CIX or Compuserve as well as BBS is necessary if you want to connect to the Internet. CIX doesn't have as many Internet services, but if you simply want to send e-mails, you are probably better off subscribing to CIX, although many BBSs also have Internet mail capability.

5. A phone bill is a phone bill - the only difference is where you are calling. You may get charged for downloading files by the company as part of your subscription. For example, Compuserve offer a range of services, some of which cost more than the standard ones.

6. Yes. It is viewed as particularly bad form, especially on BBSs, to download stuff without uploading anything (known as "Troughing"). This is understandable as they rely on people uploading things to keep them going - if no one uploads anything, there will be nothing to download. CIX and Compuserve also have file areas where you can upload files and there are plenty of conferences to air your opinions.

## FLICKER FIXERS

I have seen advertisements for a Flicker-fixer for the A4000 from Power Computing.

Does a Flicker-fixer double the scan rate of all Amiga screens so that an SVGA monitor can be used?

Do the programs run oblivious to what is

Continued overleaf →

Fix that flickering display with the AGA Flicker-fixer for the A4000, reviewed on page 35 of this issue.

## IF YOU HAVE A QUERY...

Graeme Sandiford

At Amiga Format we aim to answer as many questions as possible. Unlike some magazines, we don't just concentrate on our areas of expertise - we take on all your problems (as long as an Amiga is involved). Here are a few tips on sending in questions:

- Be concise.
- Detail the actual problem as best as you can.
- Describe the events that caused the problem.
- Give full details of your equipment.
- Make sure your question is relevant and wouldn't be more easily solved by contacting the dealer from whom you bought the goods.

Bear these points in mind and fill in, photocopy, or copy the form below as best you can.

Send your letters to Workbench, Amiga Format, 30 Monmouth Street, Bath, Avon BA1 2BW

Your Amiga:

## SPEED DEMON

I have been thinking of buying an accelerator for my unexpended A1200 and I have a few questions I hope you can help me with:

1. Will TFX run smoothly on a 28MHz 020 accelerator with 4Mb of Fast RAM, or would it need an 030 accelerator to get the best out of the game. Also, would TFX benefit from an FPU?
2. I use my A1200 mainly for word-processing work and playing games, plus a little graphics work and I was thinking of getting either an Apollo 1220 with 4Mb of Fast RAM or a Blizzard 1220/4 Turbo with a 68882 PLCC type FPU, 25/33 MHz - which would you recommend?
3. What is the difference between a 68881 and a 68882 FPU and does it make a difference whether they are PGA or PLCC type?
4. I am also thinking of getting an IDE hard drive: what is the minimum memory you would recommend as I have limited funds. I will need to put Workbench, Wordworth 2, Deluxe Paint IV, AGA, TFX and Sim City 2000.

Craig  
Berwick-Upon-Tweed

1. Playing TFX with a 1220 28MHz accelerator is quite smooth, although it is a lot smoother with an 030 and a FPU.

Yep you've guessed it, it's another question about TFX and A1200 accelerator cards.

2. There is actually very little to choose between these two boards, they give similar performances and are about the same price.

The Blizzard has better build-quality, but is a bit more expensive. If the Blizzard has an FPU and the Apollo does not, then you'll probably be better off with the Blizzard.

3. 68882 FPUs are faster than 68881 units in much the same way that a 68020 is faster than a 68000.

Essentially there is no difference between a PGA and a PLCC FPU - the performance is the same, it is just that they require different interfaces.

The PGA has several pins that need to be inserted, while the PLCC has none and can be inserted straight into a socket.

4. 2Mb should be enough to deal with most of the uses you've mentioned above, although the majority of boards at the moment are supplied as standard with 4Mb.

If by memory you mean disk space (tsk), then you should be looking at a 250Mb drive at the least - you'll soon run out of space, believe me.

being done to their output or do incompatibility problems arise with games and poorly written programs?

I have an expanded A1200 - would it be possible to design a box that plugged into the RGB port of my Amiga and doubled the scan rate of the picture and display it on a standard PC monitor?

Could such a device run independently of the Amiga so that games would play (is that what a Flicker-fixer does?) - the electronics in the box would not interact with the Amiga, only affect the video signal once it left the machine? (And why can't it sell for £35?)

Peter Tomkies  
Manchester

Funny you should mention this, we've reviewed the AGA Flicker-fixer this month (page 95).

What you have said is essentially correct - it does double the scan rate of the output from the Amiga while de-interlacing it. Programs and games should work as before because the modes affected by the board are those native to the Amiga.

Most modes are simply by-passed and outputted with little or no modification. It is indeed possible to create such a device, but it is unlikely in the extreme that £35 will even begin to pay for the development and production costs.

### SIMPLY MARVELLOUS

I own an Amiga 4000/030. My user manual states that I can add 4Mb SIMMs (Fast RAM). Do you know if I can add 8Mb SIMMs? (i.e. will they be recognised and used as 8Mb SIMMs?) At present I have 2Mb chip and 16Mb Fast consisting of four 4Mb SIMMs. If I could add 8Mb SIMMs I could achieve 32Mb Fast... would this work?

David Plumley

Yes adding four 8Mb SIMMs will give you 32Mb of Fast RAM. However, it is not possible to mix and match SIMMs of different sizes.

### SERIAL LINKER

1. I will hopefully, soon be acquiring a PowerMac 5300. It comes with a quad speed CD-ROM and hard drive etc.

Although they're not my cup of tea, Doom is, in my opinion, the best of the Amiga Doom clones.

I was wondering if I will be able to run a serial cable from one to the other, so that I can use the CD-ROM to get PD software. Will I be able to do this?

If so what kind of hardware and/or software will I need?

2. I am still looking to expand my A1200. So I am wanting to get some more RAM, possibly an

## GETTING ON TO THE WORLD WIDE WEB

I remember the good ol' days of communications technology, when nerds ruled and mentioning FTP sites to most people would get you a puzzled look. Now things have changed and just about everybody is into the Net and has their own e-mail address. There is someone to blame for this - the World Wide Web. The Web's GUI-based method of operating has made the Internet accessible to anyone who knows how to use a mouse.

However, despite the ease-of-use of the Web, connecting your Amiga is seen as a little more complicated. In fact, getting your Amiga on-line is not really that complicated a task and the rewards for doing so are worthwhile. In order to give you an idea how easy it is, we're going to take you through the process and tell you what software and hardware you'll need.

The first thing you'll need is an Internet service provider. One of the most popular service providers with Amiga-users is Demon Internet Services who can be contacted on 0181

349 0063. After opening an account with Demon you'll obviously need a modem with which to connect your computer to the Internet.

If you are going to be browsing the Web you'll need to get as fast a modem as possible as its graphical nature means that a great deal of data needs to be transferred - a 14,400 bps modem should be considered the minimum, while a 28,800 is more desirable.

On the software side, you'll need the AmiTCP and the programs that accompany it - this can be obtained from a PD library such as On-line PD who do a special ten-disk pack of Internet software that includes plenty of useful programs. You will also need a normal comms package to log on to Demon, obtain your IP address and set your password.

Once that's done you can begin the installation of AmiTCP. The installation script will ask you questions about your computer, modem and yourself - so make sure you're clued up about your setup and read the scripts'

Before you can go on-line, you'll need to install AmiTCP and provide it with your IP address.

help text if you are confused. You'll also be asked for your POP - the place you dial to log on.

To find your nearest POP, have a look at the list. Don't worry if the POP you want is not on the list of installers because you can change the number to be dialled by editing the file amitcp:dbdialscript. To find a POP near you,

accelerator as well. I have my eye on maybe the Power Viper cards or any of the range of RAM Cards. I am looking to spend around £100-130 to begin with. Help!

3. I will be buying a new game in a few weeks – a *Doom* clone, because I'm addicted on my friend's machine. Now, I know the main contenders are *Alien Breed 3D*, *Fears and Gloom* so which do you think is going to be the best. (Please don't say you've just reviewed them all this month, what a fool I must look like).

4. An idea for Escom-Commodore-Amiga-International to use. They should sign up the PD programmers of utilities such as MagicWB and MUT to produce even better software. I use *Super Dark* and a little programme called *ARq* all the time. The Amiga gave birth to PD, I think it's about time that PD brought the Amiga back from the edge.

Alex Williams  
Herts

1. Indeed you can connect an Amiga and a Mac via the serial ports using a null-modem cable. However, this will need to be done through communications software since there are no Mac-to-Amiga networking packages that we are aware of.

This will not enable you to access drives connected to either machine, as with programs like *Parnet* and *Sernet*. You will be able to access Amiga CD-ROM on your Mac and then transfer them through the serial link.

2. I'm afraid it's a bit hard for me to advise what board you should get since I've no idea what you'll be using your machine for.

The best thing you can do is have a look through the ads in *Amiga Format* and try to find a board that meets your needs best for the least amount of money.

If you intend to do a lot of graphics work or play processor-intensive games then I vote for an accelerator.

3. I'm afraid games are not my field of expertise, but for my money – bearing in mind

Here's an example of a Magic Workbench backdrop. You should have no trouble using it if it's an IFF.

that my opinions are not necessarily those of the magazine – *Gloom* seems the best of those I've seen.

4. Er, yes.

## IT'S MAGIC

I have an A1200, with a printer and 420Mb IDE hard drive. I have just purchased Magic WB and its Icon Archives. It's a brilliant package and I've already begun to update my WB.

The problem I got was when trying to load in the backdrop Sys: Prefpatterns/ Marble-classic, I got an error message saying that the 'file does not contain graphics', but it does since I've loaded it into *DPoint IC*. I have had the same problem with other images (all filetype ILBM).

My other problem is concerned with the icon archives, they are all .lha, and did not come with an unpacker. I've tried *Dopus v4's* extractor, but it doesn't work. Any ideas?

David Corbett  
West Midlands

That is a bit bizarre, the images are intended for use with Workbench, but you might want to check you still have the IFFParse library on your hard disk. If this doesn't help, check that your DataTypes are okay – there should be a datatype.library, an IFF DataType in your Devs:DataTypes/ directory and in

Creating a PC partition is not for the faint-hearted, but it is not as difficult as most people fear.

Workbench:classes/DataTypes.

LHA files are actually file archives, which is essentially several files compressed in size into a single file. While in this state they are highly compact, but can't be used as usual as with files that have been packed.

To use these files you will need to de-archive them using the archiving program *LHA*. It can be obtained from any PD library and is an incredibly useful program to have around.

## PARTITION BLUES

I have been using PC Task version 3 for some time, but have always had it set up using a hard disk file rather than making a partition on my HD especially for it. However, after reading Roger Denby's review in *AF74* where he said that the emulation works much speedier from a partition I was very tempted to produce such a partition on my HD. The only problem is that I haven't got a clue where to start.

Actually that isn't completely true, but I don't fancy tinkering with something that I'm not completely sure about and I feel that the manual is a bit too vague for me in this area.

For instance in section 5.6 the manual suggests changing the HD's DOS type. Considering I wouldn't know a DOS type from a hole in the ground, I thought I had better hang fire!

Continued overleaf →

This colourful image illustrates why there is a need for a fast modem when browsing the Web.

have a look at the list at the end of this month's Workbench (page 118).

Right, now we've sorted *AmiFTP* out the next thing we need is a Web-browser. At the moment the most popular one is *AMosaic*, but others are being developed. *AMosaic* requires at least an 2.04 machine, but an AGA machine

Help *Amiga Format* get ahead in the FutureNet access charts – visit <http://www.futurenet.co.uk>.

with a minimum of 2Mb of RAM and a hard disk are recommended.

If you wish to view pictures, you'll also need to install the ZGIF Data Type. Using the program is dead simple – just link up and point and click your way around the Web. It is also possible to use *AMosaic* to log on to FTP sites

There's plenty of Internet software available for the Amiga – even *Opus 5.11* is getting in the act.

and read articles from newsgroups. However, it is recommended that you also get specialist software for these tasks and there is no shortage of new programs coming out – there is even a FTP module for *Directory Opus 5.11* on this month's Subscribers' Superdisk. Well that's it – so what are you waiting for, get on-line!

Therefore, would it be possible for you to advise me on how this should be achieved, with the minimum of trips to the smallest room in the house! I have included as much information (on the back of this sheet) as I can think of on my setup and I was planning on mounting a partition 50Mb in size.

Mike Malone  
Manchester

You'll be pleased to know that, while complicated, formatting a PC partition is not as difficult as you might think. Although there really isn't space to go into the whole process, I will explain the difference between creating AmigaDOS and MS-DOS partitions.

You actually touched on the main difference - that of setting the correct DOS type. To do this you have to use *HDToolBox* or similar (the software that you'll be using to reformat your drive). After running *HDToolBox* click on partition drive - this will bring up another window that will enable you to specify the size and number of partitions you want for the selected drive.

Clicking on the advanced options button will bring up several new options; among these you'll find two for altering the file system to be used on the new partition. The button you need to select is *Add/Update...*, this will take you to yet another screen. There are three buttons on this screen; you need to click on the first one - *Add New File System*.

If you already have *CrossDOS* up and running, you should be able to type in *L:crossdosfilesystem* and pressing return. Another requester will then appear asking for the DOS type for the filing system; enter *0x4d534800* - the figure in the manual - and click on OK.

You should now continue as you normally do when creating a partition, but bear in mind that you will need to mount and format the drive if you want to access it from *AmigaDOS*. The *PCTask* manual has a mountlist that you can copy or you can use the utility *PCTCopyMount* supplied with *PCTask*.

## SUBS' DISK WOES

My problem is the *Subscribers Superdisk 75* which will not extract to RAM; giving the following message: "This version of LZX requires at least 68020. Please use the special 68000 version of LZX".

I am sure that the disk is working properly, but evidently I am not!

Equipment used: poor little A600, WB2.0,

A couple of Subs disks have caused problems, but that is all fixed now. This 3D object is on this month's disk.

The Workbench 3+ commodity FKey can be used to assign a variety of functions to your Function keys.

1Mb trapdoor memory, (2Mb overall). Please make any advice very clear, because I am an elderly newcomer to things computing and still approach the machine with trepidation. Many thanks for any help you can give - I'll quite understand if you are unable to answer letters.

John Satorriks  
Wirral

I'm afraid your trust is quite misplaced, as I'll have to come clean and admit that I made a goof with the *Subscribers' disk 75*.

Unfortunately, just before the deadline for the 75 disk it was decided to go with the LZX archiving system rather than LHA. In my haste to meet the deadline, I included the version of LZX that I use on my machine, forgetting that it was the 68020+ version, resulting in the problems experienced by A500 and A600-users.

Sadly, due the time-difference of printing the magazine and the next *Subscribers' disk* deadline I was not aware of my error until disk number 76 had already gone.

Right, enough of the pathetic excuses, the good news is that issue 77's disk is fine and should work with all machines. In the meantime, to fix your disks you can copy the version used on disk 72a. To do so, insert the disk and type the following line while in Shell:

copy AF72a:LZX to Subs75c

For subs disk 76 simply replace 75 with 76.

The disk should now work properly with 68000 Amigas.

## FKEY DILEMMA

1. I have tried using the 'FKey' option in Workbench 3.0. The FKey window appears, but

I do not know how to insert the key sequence in the string gadget. I have tried pressing the 'Alt' key and then the 'F1' key, but nothing appears. I would like, if possible, a dummies' guide to using the 'FKey' commodity.

2. I have recently got my hands on some MS-DOS disks that were used by my girlfriend at university. I had no problem using the 'Cross DOS' commodity to read the files, but I would like to know if it is possible to format these disks to standard AmigaDOS disks.

3. I recently became a subscriber and AF74 was my first issue. On the *Subscriber Superdisk* there was the 'Angel Imagine Object'. I have no problems loading this into *Imagine* and I copied all the files to my hard drive.

The problem arises when I try to render the project - *Imagine* starts to load the objects and then a requester appears asking me to insert the disk 'ModelsDisk2'. I have tried reapplying the brush maps to the object in the Attributes requester, but this does not solve the problem.

Neil Camner  
Northumberland

1. The FKey is a great commodity that is often over-looked in favour of PD programs that do similar things. Unfortunately, though, it is limited to use with the Amiga's standard Function keys - F10 to F10.

This means that you can only assign actions to Function keys and those combined with pressing Shift. To enter a key, you simply need to type in its number; for example "F" "1".

You should then be able to assign several functions to the keys, including several window and screen options, inserting commonly used text strings, running programs and executing *ARexx* scripts.

2. Neil, I hope you don't intend to format over any lovingly-typed letters - you unfeeling brute! Although it goes against my principals as a caring man of the 90s, I'll tell you how. When a PC disk is inserted, a second disk icon labelled DF0:??? or DF0:??? will appear, simply click on this and choose format from the icon menu.

3. That sounds a little odd - if you've copied the textures to a different directory and changed the path accordingly in the Attributes requester you should have no problems. I suspect that you may be in Group mode instead of Object mode - to switch to Object mode, press (right-Amiga) (keypad 2).

buying direct from the manufacturer means both low prices and a service second to none!

FAX 01782 744292

- ▲ With the Amiga Genitrix Graphic Tablet you can streamline the operation of most graphics or CAD programs.
- ▲ The Genitrix Graphic Tablet utilizes latest technology (71000/1000000 and "on-the-fly") with mouse, offer up to 1000 dpi resolution at the tip of a stylus.
- ▲ Complete 17" digitizing area plus super accurate stylus combine to enable fast, accurate and easy control.
- ▲ Works by "mouse emulation" so the Genitrix will co-ordinate with most packages where mouse input is the usual method-DeLuxe Paint, Photon Paint, CAD Packages, etc.
- ▲ Supplied with template for Deluxe Paint.
- ▲ This is the input method used on professional systems.
- ▲ Fast input of drawing by "tracing" is made easy - plus "absolute reference" means you can move around the screen many times faster than by a mouse.

**ORDERING TABLET**  
**NOW ONLY**  
**£29.99**

**GENITRIX PUCK**  
**£29.99**

The Genitrix fits in the serial port of your Amiga 500/500+5000.

▲ Unlike a mouse, the tablet gives absolute co-ordinates so that tracking and menu selections are possible from the tablet face.

▲ A pressure sensitive switch built into the stylus tip activates the Tablet, overriding the normal mouse input. When you are not using the Tablet, you have normal mouse control.

**FREE PC INSTALLATION PACK**  
If you buy a GENITRIX TABLET SYSTEM FOR YOUR AMIGA 500 WILL ALSO RECEIVE OFF-PAPER AND MANUALS FOR PC INSTALLATION. ALL APC ABSOLUTELY FREE!

## SMART UPS

With this un-interruptible power supply unit your system is totally protected from massive data loss due to mains power failure or voltage surges and spikes. If mains power is lost the SMART UPS 300 will automatically switch to standby power within milliseconds enabling your system to continue unaffected.

The SMART UPS 300 has both LED and audible alarm to indicate that the mains has failed, alerting the user to enable a shut down as required. Because many system failures are caused by mains fluctuation and not always mains failure the SMART UPS 300 also has EMI and RFI noise filters to deliver super clean power.

**SMART UPS 300**  
**£119.99** For data security

## HIGH RES HANDY SCANNER

- ▲ An easy to handle Scanner featuring 105 mm scanning width & 400 dpi resolution enables you to scan graphics/text into your Amiga 500/500+5000/2500/1500/2000.
- ▲ Includes hard disk transfer to run under Workbench.
- ▲ Adjustable switches for brightness/contrast levels.
- ▲ Genitrix gives you the ability to scan images, text or graphics & even offers 200 dpi Dual Scan Mode.
- ▲ Scan Grey Software included to convert half tone images to true Grey scales. Includes editing, zoom & processing features.
- ▲ Save images in suitable format for most leading packages including PHOTON PAINT, DELUXE PAINT, etc.
- ▲ View window and position control panel.
- ▲ Powerful partner for DTP that allows for cut & paste editing of images etc.

**£79.99** WITH FREE PHOTON PAINT

## MIDI MASTER PROFESSIONAL MIDI INTERFACE

**NEW LOW PRICE**

## THE BEST SELLING MIDI INTERFACE FOR THE AMIGA

- ▲ Full specification Midi In, Midi Thru and Three Midi out sockets.
- ▲ Stylish case to match Amiga colours
- ▲ Fully Opto Isolated.
- ▲ Compatible

**MIDI MASTER**  
**£19.99** **£39.99**

## MICRO MIDI

**FULL FEATURE MIDI INTERFACE**

- NEW LOW PRICE**
- ▲ Low cost Midi Interface.
- ▲ Midi in, Midi Out and Midi Thru.
- ▲ Opto Isolated.
- ▲ Compact design.

**MICRO MIDI**  
**£11.99** Amiga 500/500+ Amiga 500/1200

## REPLACEMENT POWER SUPPLY

- ▲ Switch Mode Electronic System.
- ▲ 4.5 Amp Output.
- ▲ Cool Running.
- ▲ 13 Amp UK approved mains plug.

**REPLACEMENT SUPPLY**  
**£39.99** Direct Plug in Replacement

## Competition PRO CD 32 JOYPAD

- ▲ **TURBO FIRE**
- ▲ **SLOW MO & AUTO FIRE**
- ▲ **8 WAY SUPERSWITCH.**

**£16.99**

## AMIGA HYPERPAD

**AMIGA HYPERPAD**  
**£12.99** AUTO FIRE SPEED SELECT

## HANDY SCANNER

**£79.99** WITH FREE PHOTON PAINT

## MAGNETIC CARD READER

Explore the data hidden on Credit Cards, Debit Cards, Security & Membership Cards etc.

Simply swipe your card and read the contents. Tracks tracks 1, 2 and 3.

Plugs into your Amiga Joystick Port.

**MAGNETIC CARD READER**  
**£59.99** Complete system

## VIDEO DIGITIZER 2

A low price real time video frame grabber for the A500. Save images as Raw or IFF. Mono digitizing at an affordable price.

**VIDEO DIGITIZER 2**  
**£29.99** IDEAL FOR DTP etc

**NEW**

## GOLIATH POWER SUPPLY

3 times the power of a standard power supply

**£44.99**

## GOLIATH HAS THE POWER

Goliath is a direct power supply replacement with a difference! If you have an Amiga with a large hardrive, extra memory, accelerator board or indeed any powerful add-on then a standard Amiga power supply just cannot cope. The Goliath packs more power than you can possibly need.

▲ Fan cooled.

▲ Heavy duty case.

▲ Switch mode electronic system.

▲ Full 200 watt output.

▲ On/Off switch.

▲ 13 Amp UK approved mains lead.

▲ Direct plug in replacement.

▲ Also available for c632.

**AMAZING 200 WATTS OUTPUT!**

## THE ANSWER TO ALL YOUR DISK BACKUP PROBLEMS!

SYNCR0 EXPRESS is a sophisticated hardware and software package that works by directly controlling your second drive as a slave device ignoring the Amiga's own disk drive controller. This way SYNCR0 EXPRESS delivers power to backup programs when other backup systems fail.

▲ The most powerful disk backup system ever conceived.

▲ Very simple to use requires no user interface.

▲ Powerful "SYNCR0 MODE" actually synchronizes your drives to achieve even greater backup power!

▲ Menu driven selection of start/end track. Up to 85 tracks.

▲ Totally "transparent" hardware switches out automatically when not in use.

## SYNCR0 EXPRESS

**£34.99** For A500/600/1200

**NOW VERSION 5.0**

WARNING 1988 COPYRIGHT ACT

FOR THE AMIGA

# A1200

## NOW PLAY YOUR FAVOURITE GAMES TO DESTRUCTION!

**ACTION REPLAY GIVES YOU THE POWER TO FREEZE ANY PROGRAM AND TAKE TOTAL CONTROL!**

- Save the entire program in memory to disk. The saved program will reload and run from the point where it was frozen. Perfect for backup & game save option.
- Game trainer feature gives you the power to find cheats within any game. Infinite LIVES, ENERGY, LEVELS etc. Ultimate GAME BUSTING POWER.
- Screen Grabber option lets you freeze and save screen to disk. Pictures saved in IFF format suitable for all leading graphics packages.
- Powerful monitor functions give you all the tools to freeze and hack the program in memory. Full 64000 assembler/disassembler. Breakpoint & trace - simple step commands. Remember that ACTION REPLAY lets you view the program in it's frozen state - no other toolkit can offer this feature.
- Powerful hardware features custom logic and on-board scratch ram so No AMIGA MEMORY IS USED.
- Works with up to 8 megs of AMIGA RAM!
- Very simple to install... Just plug into A1200 trapdoor.

**A1200 ACTION REPLAY**  
**£59.99** Amiga1200

Very simple to use - Just press the freeze button to take total control of the frozen program in memory.

**THE POWER TO BUST YOUR GAMES WIDE OPEN!**

**24hr Mail Order Hotline**

**8 BIT SOUND SAMPLER**

**FULL 8 BIT SAMPLING AT A NEW LOW PRICE**

- Full 8 Bit Sound Sampling System.
- For A500/1500/2000/1200.
- Fits into Printer Port.
- Complete Hardware/Software package including Sound Sampler

**8 BIT SOUNDSAMPLER**

**£19.99** Amiga 500/1500/2000

**1500/2000 POWER SUPPLY**

- Switch Mode Electronic System.
- Direct replacement
- Cool Running.
- Fits 1500 and 2000.
- Low, Low price

**1500/2000 REPLACEMENT POWER SUPPLY**

**£79.99** Direct Replacement

**AMIGA VIDEO INTERFACE**

This Amiga video interface allows you to output S-VIDEO or COMPOSITE PAL from your Amiga.

- Connects to Amiga monitor port Thru connector allows standard Monitor to be connected simultaneously.
- Separate output gives S-VIDEO or COMPOSITE PAL output (please state which required)
- Ideal for many video applications including titles etc.
- Allows Amiga to be used with any SCART TV if you don't have an Amiga monitor

**VIDEO INTERFACE**

**£34.99**

**INTERNAL MIDI CARD**

**FULL FEATURE MIDI INTERFACE**

- INTERNAL MIDI CARD FOR A2000/1500/3000
- Full Feature Midi Interface - Midi In, Midi Thru and Three Midi outsockets
- Opto Isolated.

**INTERNAL MIDI CARD**

**£19.99** Amiga 2000/1500/3000

**REPLACEMENT DISK DRIVE**

- Top quality external 3.5".
- Quiet operation.
- Small footprint slimline design.
- Built-in anti-click feature.
- Delay chainable via thru port.
- No need for external PSU.

**REPLACEMENT DISK DRIVE**

**£49.99** Direct Plug-in Replacement

**3.5" INTERNAL FLOPPY DRIVE**

- Quality Chinon Mechanism
- Features special eject button
- Quiet operation.
- Includes mounting pillars.
- Comprehensive instruction manual.

**INTERNAL DRIVE**

Amiga 500/1500/2000 **£39.99** Amiga 2000/1500 **£49.99**

Here at Dattel we have been designing exciting computer peripherals for over 10 years.

By dealing direct with the manufacturer you can be sure we offer the latest products at the lowest prices.

Our sales and technical staff will be pleased to advise you and we will deliver your order to your door within days. Why not give us a try.

### AMPLIFIED STEREO SPEAKERS

**YOUR AMIGA HI-FI STEREO SOUND. WHY PLAY THIS THROUGH A SMALL TV SPEAKER WHEN YOU CAN HAVE FANTASTIC HEAD-BANGINGLY GLORIOUS ARCADE STEREO?**

**10 WATTS**

**£14.99**

**Logic 3**

MAGNETICALLY SHIELDED

### SATURN

**TURN YOUR AMIGA INTO A D2 MAC VIEWING CARD**

This special SATURN viewing card connects your COMAC & VIDEOCAPT decoder directly to your AMIGA! By using the special software provided you can view upto 3 new satellite stations for FREE - including FILMNET PLUS!

Also supplied with software for TV EUROPTICA (Exhibit F1 Videopoint)

Because the system is AMIGA software based you can update simply. Unlike viewing cards which can be bought, there is no need to return a card for upgrade.

Connects to serial port of AMIGA. Monitor mode displays & logs incoming data.

Now you can buy a complete upgradable system for less than you would expect to pay for a single card!

**SATURN CARD**

**£49.99**

**ACTION LINE BBS**

ACTION LINE is the biggest and best BBS yet! Over 10,000 of data. Loads of game cheats, TV, albums, images, chat, adverts. Large AMIGA only section. Plus much, much more!

All speeds to 33.6 FAST.

**SUBSCRIPTION & VIEW NUMBER**

# Amiga.net

**Darren Irvine takes a look at the Internet Gophers and their useful friend Veronica.**

**E-mail us on...**  
amformat@futurenet.co.uk  
Please make sure you mark the relevant subject in the subject line (Letters to the Editor, Workbench, Backstage etc.).

## Know It All

I'm using Gopher here to browse the Amnet mirror held at the Imperial College in London.

Downloading a file using Gopher is as simple as clicking on it, waiting a while and choosing where to save it.

AMosaic can be used to present a slightly more user-friendly interface to Gopher.

If you use the World Wide Web, you may have come across pages that look unusual and have the word "GOPHER://" at the start of their URL, instead of the usual "HTTP://".

### RUMOUR MILL

After last month's (now seemingly correct) rumour concerning the Juggler Web browser, browsers seem to be sprouting like sprouty things on a fresh spring morning. As well as the next version of AMosaic, and the aforementioned Juggler, browsers such as iBrowse (cringe), Weblink, and the bizarrely named P'Jam! are also apparently under development.

Which of these proves to be the best for end-users is a matter of considerably heated debate on Usenet at the moment, with the chief consideration seeming to be which of the programmers involved is the biggest git. Also, apparently, if you think iBrowse is going to be any good then you're a "pathetic sheep".

What has happened when you see this is that your browser has been diverted off the Web into what is known as "Gopherspace" - the area of the Internet inhabited by Gophers (and Veronica too - but more of that later). But what exactly are these Gophers, and how can you make the best use of them?

### WHAT EXACTLY IS A GOPHER

Gopher is a tool invented at the University of Minnesota and was designed to help organise some of the clutter that exists on computer systems.

Instead of having to poke around hopelessly, using nasty 1970's style tools like FTP, Gopher organises things into nice, hierarchical menus that can be easily navigated.

Gopher works on the time-honoured Internet method of Client-Server computing - where one computer system acts as the server and dishes out information when requested and the other acts as a client for this information and presents it in a user-friendly manner (at least in theory).

There are thousands of Gopher servers world-wide, but, thankfully, since most of them know about all the rest, navigating round various Gopher sites is almost as seamless as using the Web.

Some Gopher clients require the user to type in the option can each menu that is required and others, such as those available to you as an Amiga-user, operate in the usual point-and-click manner.

Additionally, Gopher has a search system called Veronica which enables you to quickly and easily perform searches on all the menu items on all the Gopher servers in the World.

You might be forgiven for thinking that, since any given search might be likely to return hundreds of results, the whole thing might be pretty horrible to use.

However, the cunning thing that Veronica does is to return the results in exactly the same format as a "normal" Gopher menu page. This method of treating search results as if they were normal menu items makes using Gopher extremely user-friendly.

### GOPHER ON THE AMIGA

There are three methods of using Gopher on the Amiga (assuming that you have an Internet connection of course).

The first involves using Telnet to connect to a public access Gopher site, and is too nasty to discuss here. The second option is to use a program, rather astoundingly called "Gopher",

The implementation of Gopher that runs under AmITCP uses AmigaGuide as its method of display.

You can easily get a list of all the Gopher servers in the UK. Then it's just a matter of making good use of them.

Searching for stuff using Veronica is also possible and makes using Amiga Gopher extremely user-friendly.

The results of a Veronica search are presented as if they were just another Gopher menu.

## SAD USENET CONTRIBUTOR OF THE MONTH

Although the clamor to port Netscape to the Amiga seems to have died down a bit recently, much amusement was bestowed upon the Amiga Usenet community by the offer of one Bartosz Pampuch to port Windows '95 to the Amiga. Despite the fact that:

- a) This is an obviously mad idea since no-one actually wants it.
- b) Microsoft wouldn't let him do it.
- c) It would take so long that Microsoft themselves

would probably have finished the next version before he finishes.

Bart is determined to get started, and has asked for interested parties to e-mail their support.

One of the best suggestions to speed up the completion of this project was to develop a program that simply displayed the Win95 boot screen and then crash with an out of memory error - thus providing full Win95 emulation.

The results of a Veronica search (in this case for the word "Amiga") are presented as if they were just another Gopher menu.

which uses AmigaGuide as an interface to Gopherpace.

Sometimes, this is bundled with

AmiTCP distributions - to see if you have it, simply type "Gopher" in a Shell - if it's there, it'll pop up an AmigaGuide window. If you don't have it, it is available from any of the Aminet mirrors in the "comm/tcp" directory.

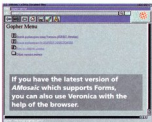

If you can use AmigaGuide, then you can use Gopher using this program. Everything works fine, and you'll soon find yourself getting to grips with navigating Gopher menus and performing Veronica searches.

## IT'S THAT WORLD WIDE WEB AGAIN

The third method of accessing Gopher on your Amiga, is to use *AMosaic*. To access any given Gopher server, just type in its address preceded by "GOPHER://" in the URL requester and you will have instantly turned your Web browser into a Gopher Client.

Note, however, that to get the most of Gopher you will need to be running at least *AMosaic 2.0 Beta* (actually called version 1.4). This is because this is the first version which supports HTML forms, which are necessary for inputting information - in this case the search strings required by Veronica.

Now that you know what Gopher is, there's no need to be afraid of small rodents infesting the Internet. And now that you're familiar with forms-based search systems, you'll also be able to get the best of Web search engines like Yahoo and Lycos.

## VERONICA SEARCHES

The simplest form of Gopher or Veronica search is to type in a single word and press Return.

If the word is specific enough to your search category this may be enough, but chances are using a single word search with Veronica will result in a returned menu containing literally thousands of items.

It is usually better to specify a number of keywords with which to do the search.

### SEARCH OPTIONS

The first way in which you can restrict the number of items returned from a Veronica search is to use one of the available option flags.

These are specified by a minus (-) sign followed by either a "t", and "m", or an "i". These options may be placed anywhere in the query line. The meaning of the three options is as follows:

-t This option selects particular Gopher item types. The "-t" is followed by a number representing the Gopher item type which are as follows:

- 0 Item is a file
- 1 Item is a directory
- 2 Item is a CSO (q) phonebook server
- 3 ERROR
- 4 Item is a BinHexed Mac file
- 5 Item is a DOS Binary archive
- 6 Item is a Unix uncoded file
- 7 Item is an index-search server
- 8 Item is a text-based Telnet session
- 9 Item is a binary file of some sort
- T Item is a TN3270 connection (Telnet)
- S Item is a sound file

- g Item is a GIF graphics file
- M Item contains MIME data
- h Item is HTML type
- I Item is an image
- i Item is an "inline" text file

For example, to search for all Directories with the word "RS232" type:

-t1 RS232

You can search for more than one type of item, so, for example, to search for all Telnet sessions, GIF files, or sound files with the word "curry" type:

curry -t8gs

-m This option restricts the maximum number of items returned directly, by specifying a number after the -m option (the default with no "-m" option is 200). So, to search for up to 500 items with the word "sausage" type:

sausage -m500

The -m option on its own with no number specifies that you wish an unlimited number of items to be returned.

-l This option returns the link information as a file.

### QUERIES USING LOGICAL OPERATORS

The other way to make your search more specific is to use more than one search keyword and you can use the following logical operators: AND, OR and NOT.

Interpretation of the query is from right to left, but if you are in any doubt, you can use parentheses. In addition to this, adjacent search words without a logical operator between them are treated as if there was an "AND".

### EXAMPLES

If you want to do a search for any records that have both the words "window" AND "curtain" in the title you would type:

window and curtain

You can use the logical operators at the same time as using the option flags and so, for example, to search for all Gopher Directory items that contain the word "fidonet" OR the word "strange" you would type:

fidonet or strange -t1

The search area can also be specified by the use of the NOT operator. If you wish to use more than two search keywords, it is usually a good idea to use parentheses to define exactly the way in which you want your search keywords and logical operators to interact. For example...

curry and (vindaloo or fal)

...will search for items which have the word "curry" AND either "vindaloo" OR "fal" in the title. You can also use the metacharacter "\*" to specify wildcard matches at the trailing end of a search word. For example...

war\*

...will search for all titles with words like "war", "warbaby", "warlord" etc.

**Send your letters to: Letters To The Editor,  
Amiga Format, 30 Monmouth Street, Bath, Avon BA1 2BW.**

Your Super Skidmarks registrations are being dealt with as we speak.

## ACID REMARKS

I know you've been 'sucking up' to a few of the minority software houses because they are still supporting the Amiga, but I am sure that even you will not support the sale of games software under false pretences.

I refer to Acid software's *Super Skidmarks* which, having read your review (AF71, 92%), I purchased (in April) after consulting the manual accompanying the software to ensure hard disk support.

I never buy software which won't install on my hard disk. To date, the installation software promised as my prize for wasting a stamp to register hasn't appeared.

I welcome Acid's support of the Amiga, but why do software companies in general consider Amiga users either too

untrustworthy to allow them unprotected software, or too stupid to recognise when they are being taken for a ride?

Come on Acid etc. I may only own an Amiga but I still help pay your wages!

*Nigel Lines*  
*Shropshire*

*You can install the game, except for the track disks, which does make a great difference to its playability. We spoke to Guildhall Leisure and they said they had processed many thousands of orders so far, and have been rather overwhelmed by the amount of registrations they have had back.*

There are less than 1,000 more to deal with and they ask these people to be patient, because they will all be dealt with soon.

## GOING DIGITAL

So now it has been announced when the Amiga 1200 will be released back into the shops. It is time Amiga owners, programmers and publishers start the offensive and make people want to buy one.

I read the teletext computer games thingy *Digitiser*, a multi-format game mag. They never review that many Amiga games, the last one was *Gloom*.

Of course, many loyal Amiga owners have written in to complain (I did last year, and I was called an Amiga Whine!), but they either

## FAIR COP

I feel that for the sanity of fellow Amiga enthusiasts and myself I must put ink to printer paper for the first time. I have read over and over again in Amiga magazines that the Amiga will only survive if we expand (i.e. hard drives, accelerator cards, CD-ROM drives, second disk drives etc.), making the Amiga easier for software developers to make quality products to keep the computer in the forefront of technology.

Bearing this in mind and considering that Escom are supposed to be selling Amigas with fitted hard drives, in future could you please, please, please supply your Coverdisks with the option to de-archive them to a hard drive (e.g. DataNEXUS/InfoNEXUS).

**Nigel Stone**  
Wiltshire

Indeed, it is something we should do. Unfortunately, so many times we have a struggle with getting everything on the disk. This month for example, we have got four disks into one, to give you the full *Real 3D* package and that wouldn't have been possible if we had used the Commodore installer on the disk too. We are looking into alternatives at the moment though.

insult that person, or claim that they do not receive any games from Amiga publishers.

The major shame is their 'best games this year' chart, not one Amiga game has made the grade. Come on, the reason for this is that they have not reviewed any classics (except *Gloom*). Games like *Super Skidmarks*, *Sensible World Of Soccer* and *Colonization*, are better than *Return Of Fire* on the 3DO.

Now going straight to the point, I am requesting that the Amiga game publishers start using their heads and send their games

to Digitiser. When they score better than that PC game, the Amiga will have the publicity it needs. With over 1 million readers, it is bound to help sales of the particular game. Show these multi-format "mags" that the Amiga is still the king. Spread my message *Amiga Format!*

Andrew Maddocks  
Shropshire

*Hmm. Obviously, this is one for the software houses, but it does seem*

**Continued overleaf =>**

# The Gallery

TEIJIN

by Lars Martensson, Sweden

A new incarnation of the Teijin pic. A familiar image to demo coders and fans of the Wit Premium demo alike. Lars proves that the Amiga combined with artistic talent is a formidable combination in anyone's book.

✦ rather odd that a service designed to review games on all formats is neglecting some of the biggest-selling games on any format.

### ANY COLOUR YOU LIKE

Three cheers and my thanks go to Escom for taking up the Amiga tower. It's a relief to know that such a fine series of machines shall not fall by the wayside in the manner of the TRS-80.

But, at the risk of irritating many of my fellow devotees, I have to say that the new A4000T has to be one of the ugliest designs I've ever seen! My A500 is much prettier, despite all the different third-party peripherals that comprise my hodgepodge system.

Commodore's crew may not have been good at marketing, but their products were dynamic and aesthetically pleasing. Perhaps Escom could at least get rid of that combat-ready green and replace it with a safe beige.

If this is what Amiganauts have to look forward to, I may keep my current system until it gives up the ghost, or buy a new one and hope that someone will manufacture a different box to hide it in.

But ultimately, there must be new Amigas for me to buy. Rumour has it that Escom has no real interest in this side of the Atlantic, primarily because it is overrun by the Big Blue clones.

If the Amiga is to survive, it must go head to head against the competition on MS-DOS turf—a fact which Ali, Gould & Co. refused to acknowledge. This is the birthplace of the Amiga, and ignoring the North American market will undoubtedly bring down the final curtain on this noteworthy machine.

Kenneth E. Lizotte  
Vermont, USA

Someone famous' A4000 tower. The new A4000s will be in beige cases.

Well, I think it may be a little harsh to not buy a machine based entirely on its colour. Besides, the vanilla colour is a little tame don't you think? You can rest easy however, because the model shown was only that, a model, and the new-look A4000s will probably be entirely different. The initial 4000s will come in beige tower cases.

If you are really offended by the colour, you could take matters into your own hands, and give it a respray, as this rather sad reader (it's okay John, we won't let on it's you) has done. Does anyone else have severely customised Amigas they'd like to share with the world? Send your pics to "Show us yours" at the usual address.

### THE PRICE IS WRONG

I run a PD Library and am horrified at the prices some companies have the nerve to charge. In my opinion PD or Shareware should be free and available to everyone.

For this reason we are running this offer. Buy any 10 or more disks from our collection for only 60p each and get one PD disk of your choice free.

Only one of 10 PD Libraries we obtained software from had a catalogue disk that was anything near organised, gave a prompt service and had decent prices. We

still use them now for replacement copies of our disks.

If any of the PD Libraries out there think we are wrong with what we say or wish to try and justify their charges then please write to this magazine and prove us wrong.

Why not give us a try? Send a blank disk with an S.A.E. to the address below and we will copy our catalogue (with a free up-to-date virus killer and game) on it and send it back to you immediately.

Barry, Pigny Crush PD  
5 Shomer Place  
Swansea SA5 5PH

Actually, we haven't had any letters complaining about the price of PD programs for a long time, but if you think you can give better service at a decent price, then fair play to you.

### EXTRAVAGANT RESPONSE

Firstly, I would like to thank Oliver Roberts for his excellent *Formula One Grand Prix* editor.

I was very upset when I bought my A4000/030 two years ago and noticed there was no speed increase on *FIGP* from the A500 version but thanks to the brilliant *FIGP*Ed I can now play the game at a silky-smooth 16fps. It's now a completely different game.

Secondly, I would like to complain about Mr Sandiford's response to Andrew Frodsham's letter (AF73). He should not be saying that buying an accelerator to play games is "extravagant", but instead should encourage all Amiga owners to buy accelerators. PC games now require most users to have at least a very fast 486 and about 6Mb of RAM.

If more Amiga owners have faster machines, then the better games will soon appear on the Amiga, just like what happened to

the PC in the last few years. *FIGP* 2 on the PC for example needs 8Mb, a CD-ROM and a 486 running about 66MHz.

If it came out to run with 8Mb, a 25MHz 68040 and a CD drive, I would be quite happy to pay an extra few hundred quid on a CD-ROM, an accelerator and another 2Mb because I would hope that other games requiring similar specs would be released.

Yet instead we live in a world where half the games released are still not AGA enhanced and even more do not install on a hard drive. I do find it annoying that I have a 1Gb hard disk in my Amiga and I can't even install my favourite games like *SWOS* and *Mortal Kombat 2*.

I just hope that one day all Amiga owners decide to upgrade their machines so games publishers will start producing games worthy of it.

Gideon Cresswell  
Kent

Some steps towards upgrading the common man have already been made — by Amiga Technologies. The appearance of a standard hard drive-equipped A1200 is a great boost to the Amiga community.

I suspect that the biggest block to releasing AGA enhanced games are the game publishers and distributors. The problem is that the shops which stock games don't want to bother ordering a number of A1200 versions of a game as well as A500 versions. To succeed in pleasing both the shops and the punters, the game companies would have to make what is called "auto-enhancing" software, which in most cases would require more production time and money.

It is a step forward that a lot of modern games will use extra features like accelerators, but I take the point that more could be done.

**PHOTOLAND** by Michael Håkansson, Sweden  
Rendered using Real 3D v2, Brilliance, Vista Pro, Image FX v2 and ADPro.

**ROBOCOP** by Paul Sullivan, Oldham  
Paul drew this excellent image of Robo by hand, using TrueBrilliance.

**BATMAN** by Mark McFadden, Eire  
His full name is Batman Digital Justice and it was hand drawn using DPaint IV and Brilliance 2.

## BUNDLES AHOY!

Photogenics is an excellent image processing program and graphics tool.

I would like to defend Escom's decision to release the A1200 for close to £399 this Christmas. I read that they had to pay through the nose to jump the manufacturing queue and that cost has to be passed on.

The alternative seems to be the absence of the Amiga for another Christmas and nobody wants that. The secret of success for the Amiga this year lies with the bundle arrangement, though I would have preferred the option of an unbundled A1200 for £299. However, as with *Batman* so many years ago, a carefully-chosen bundle could really help the Amiga.

Key pieces of software for the Amiga must include either *Wordworth 3.15E* or *Final Copy 2 Release 2* and also *Championship Manager 2*. *CM2* will be a guaranteed number 1 hit with the Premiership full of exciting new players. *Gloom* or some variant could also be bundled to tip the cap at that genre.

The £399 Amiga should be a strictly limited edition so that when the Escom

manufacturing lines are set up next year, a £299 Amiga can be released with a 3.5-inch hard drive built in without too many £399 Amigas on the street.

Paul Chan  
West Yorkshire

Well, you will have read in the news pages by now that the bundle is very strong on the productivity front, containing excellent packages like *Wordworth 4SE*, *Photogenics* and *Personal Paint*.

The games side isn't so strong. *Gloom* (or *Fears* or *Allen Bred 3D*) would have been good, or even *Super Skidmarks*, *Colonization*, *UFO Enemy Unknown*, *SWOS* even.

Still, at least the bundle is good, and will hopefully sell well. The big question though is what do A500 owners wanting to upgrade do? When will we see a standalone machine? My personal feeling on this is that it should not be until such a time as improvements have been made to the design.

## MEGASATENDOSTATION

Reading an article in the *Financial Mail* about the console war between Sega's Saturn, Sony's PlayStation and Nintendo's non-existent Ultra-64, which stated that the PlayStation was easier to write for, and the Sega Saturn was more complex, due to it's two (although some idiots say that it is four) 32-bit processor architecture. Sony have been hoping developers will develop for THEM, as the two processors allow for better games.

1. Hang on. Are Sega actually telling us that spectacular 3D texture maps make a game the best in the world and that everyone should buy a copy? I remember the good old days when games only used 16 colours and 3D meant ugly polygons.

And as for Nintendo, which I have not mentioned too much, countless Nintendo freaks that I know have reformed to Sega freaks, and have bought Saturns.

2. The Amiga dilemma. Well, no Amiga yet, but more on the way! Hurray! One-and-a-half years of blackness, darkness, shadiness, dimness and *Gloom* (By Mark Sibly - See part three). A1200s coming in Autumn. And with rumours of A1200s at £199, it's a joy.

However, I read Teletext (Ch4, p174, *Digitiser Hot Topic*) and the hot topic was: Amigas £399 too much? And to my despair, anguish, and er, horror, I found that mostly the answer was YES. Eek! Surely Escom can match Commodore's price of £299, or even lower? But then I thought... Hang on!

Maybe Escom are releasing a mega 030-based A1200 with 4Mb of RAM? Or maybe *Digitiser* is "the foul creature of the Networld" that caused the recession and spread deceitful, fallacious rumours". Ahem. Yes. Viva Amiga!

3. Oh and by the way... I have found another weapon on *AB3D*. I'm not going to give too much away, but it is behind a door that you have to press FORWARD and SPACE simultaneously. Watch out for the alien behind, and pick up the futuristic sewing machine thing. Press 2 to select it, and you can start kicking some butt!

Make sure you pick up the ammo as well. If you run out of ammo, simply press 1 to get back to your pistol-type-thing. Oh, and as you may have guessed, I read *Amiga Power*. Natch. (Sorry).

Stuart Brown  
Lancs

P.S. I am only 12. Honest.

1. I know what you mean. It's no wonder that ZX Spectrum emulators are probably the most popular PD software at the moment on the Mac, PC, and to some extent the Amiga.

Hang on a minute, though, if you're only 12 how do you remember the joys of 16 colours and terrible collision detection? It's nice to have the power to produce stunning graphics, but as you say, that doesn't necessarily make the games any better to play (well, only for sad people who are too cool to play anything that isn't rendering 20 million polygons per second).

2. It's true, but the bundle is quite tremendous. Hopefully, as I said before, when a standalone Amiga is released it will be enhanced - at least with some amount of fast RAM and maybe a faster processor.

3. Thanks for the tip. The capital letters are a giveaway.

## THE CD ALTERNATIVE

I am writing to express my concern over the proposed price-point of the new A1200s. £399 - even for such a superb machine, coupled with some excellent software (I hope!) - is too expensive.

This judgement is not made purely from the relative price points before the demise of Commodore, but also from looking at the prices of the (much under-rated) CD<sup>32</sup>. SDL are currently selling the CD<sup>32</sup> at £199 with seven games. Add to this the cost of an SX-1 module (£100, keyboard (£55), and disk drive (£45), and you have a total of just under £500.

The equivalent A1200 system would cost £399, plus around £180 for a CD<sup>32</sup> - compatible CD-ROM drive. This equates to about £580. And the A1200 CD-ROM isn't 100 per cent CD<sup>32</sup>-compatible!

This comparison shows that any prospective A1200 buyers should go instead for a CD<sup>32</sup>/SX-1 combo. In the form I mentioned above, it's just as fast as the equivalent A1200 system, and just as expandable, but £80 cheaper!

If Escom intend to sell many A1200s, they are going to have to rethink their pricing policy.

Jonathan Duke  
Herts

Yes, that is more or less true, although you won't be able to add accelerators like the Falcon or Blizzard to the CD<sup>32</sup>. Interestingly, when the 68060

version of these accelerators come out, you will be able to have a faster Amiga even cheaper.

## GLOBAL SUFFERING

Regarding Mike Davenport's letter in *AF* concerning his unwavering resolve not to buy and products being made in China simply because he does not like what goes on in that particular country.

There is suffering going on all over the world - the Chinese are not the only people to receive such pitiless wages for what amounts to slave labour - and it figures that the more products we buy from them then the more prosperous the country shall become.

Attempting to enforce an embargo will spell economical decline and then where would all these workers be?

Does he expect countries such as India and Africa to stop buying our homegrown/made goods simply because they were once part of the "Great British Empire" and suffered terribly as a result?

I doubt it.

David O'Connor  
Dimington, S. Yorkshire

I think there is a difference between human rights violations allegedly being perpetrated here and now, and those crimes committed many years ago, but it is a reasonable point. No one seemed very concerned about working conditions in the Philippines...

However, as we have pointed out before, Amigas are not being made in China now. But they are being manufactured in France, which hasn't made very many friends recently either (although it is only fair to point out that the majority of French people are against nuclear testing, it is just their Government that don't seem to see anything wrong with it).

More top tips for the brilliant *Alien Breed 3D* from Stuart Brown.

[illegible]

# AMIGA

## special FORMAT OFFERS

Check out our **AF** readers' offers, all at low, low prices. After choosing your special offer, turn to page 137 to fill in the order form.

All prices include postage and packing

Call our Order hotline on  
**01225 822511**

### Siegfried Antivirus Professional

Save £5 on one of the best virus checkers available. SAP will help guard your Amiga against the unwanted attentions of viruses – it's more powerful than the various Public Domain virus checkers and includes several unique features. SAP works with all Amigas with Workbench 1.3 or better, although 1Mb of RAM and a hard drive are recommended. When it was reviewed in AF72, SAP scored an impressive 81 per cent and was described by Nick Veitch as: "Possibly the most thorough virus protection system for your Amiga".

**NEW!**

Description	Siegfried Antivirus Professional	
Order code	AMFVIR	AF Price £34.99

### The Serial Killers

Nothing can beat the thrill of playing the best Amiga games head-to-head with another human player using a serial link cable. And Amiga Format can bring you that experience with this specially selected pack of three of the best-ever serial link games – all for under £30.

The Serial Killers kit includes WW1 flight sim Knights Of The Sky, driving games Stunt Car Racer and Lotus 2 plus a three-metre serial link cable – everything you need to get hooked up and running.

**NEW!**

Description	The Serial Killers	
Order code	AMFSK	AF Price £29.99

### Directory Opus 5

Save £10 off the recommended retail price of one of the most useful and time-saving utilities for your Amiga. Directory Opus 5 (AF72, 95%) more or less replaces your Workbench and makes many of those file management tasks much easier. An essential utility for the well-organised Amiga.

**NEW!**

Description	Directory Opus 5	
Order code	AFOPU	AF Price £49.95

### TV\*Text Professional V2

Upgrade to the brand new Format Gold-rated version of TV\*Text Professional now at a huge saving over the RRP!

See the review in in AF64 for full details of this tremendous video titling program then choose which upgrade option suits you:

- The complete TV\*Text Professional v2 package complete with both manuals and 50 extra outline fonts for just £89.99.
- The AGA upgrade and supplementary manual at £59.99.

Description	TV*Text Pro	
Full Package	AFTVTF	AF Price £89.99
Upgrade	AFTVTU	AF Price £59.99

### Turbotech Clock Cartridge

Your Amiga will always know what day it is with this handy device which sets the correct time and date. The Turbotech Clock Cartridge simply fits into the disk drive port (or on the back of your second drive). Comes complete with software. Save £2 off the recommended retail price.

Description	Turbotech Clock Cartridge	
Order code	AMFCLO	AF Price £17.99

## Personal Paint 6.3 and Personal Fonts Maker 2

Take advantage of our very special AF mail order offer and get the truly excellent *Personal Paint*, plus the bitmap pixel editor, *Personal Fonts Maker*. *Personal Paint* is a paint, image processing and animation program, and is an ideal graphics package for programmers and the more serious Amiga user. *Personal Fonts Maker* offers support for standard mono and colour fonts, as well as outline fonts and AGA screen-modes. The program uses the same graphics engine as *Personal Paint* and enables you to create bitmapped fonts of your own, which you can colour and use for posters, business stationery, album covers and so on. *PFM* is easy to use, has lots of features and gives results that are really impressive. Now you can get both these great programs for a bargain price of £49.95.

**NEW!**

Description	PPaint 6.3 & PFonts Maker 2		
Order code	AFPP	AF Price	£49.95

## Music-X 2

This sequencer package, (85%, AF60), is one of the most ground-breaking releases since the original *Music-X* made such a huge impact back in 1989. *Music-X 2* is a full MIDI sequencing package for controlling synthesizers, drum machines and any other MIDI equipment, or you can use it with internal Amiga samples. The leading sequencer for the Amiga.

**SAVE £100**

Description	Music-X 2	EVEN LOWER PRICE
Order code	AMFMX2	AF Price £49.99

## Mouse 'n' Mat

At last! A quality replacement mouse at a bargain price, complete with mouse mat. The 260dpi resolution mouse is 100 per cent Amiga- (and Atari ST-) compatible and both buttons are fully micro-switched for maximum reliability and performance. The tastefully-coloured neoprene mouse mat, essential for keeping your mouse free of dust and dirt, is 5mm thick and has a non-slip backing surface.

Description	Mouse 'n' Mat
Order code	AFMM
AF Price	£12.99

## Helm

A true multimedia authoring system, *Helm* earned 91% in AF53. Create image editors, databases, information managers, or educational courseware. *Helm* is an authoring system and a graphics program, combining paint and image processing tools with a scripting language, a hypertext database manager and user interface objects.

Description	Helm
Order code	AMF503
AF Price	£99.95

## Amiga Format Binder

If your magazines live in large piles on the floor and you can never find the one you want, then keep your Amiga Format collection neat and tidy with these practical, yet stylish black-and-silver AF binders. Why not buy two and save on the deal?

Description	Binders		
One binder	AF108	AF Price	£5.99
Two binders	AF109	AF Price	£9.99

## Digita Organiser

Another Amiga Format Gold, after using *Digita Organiser* you'll wonder how you ever kept your appointments in order. Easy to use, but packed with features, this is truly the king of electronic Filofaxes.

**NEW!**

Description	Digita Organiser
Order code	AFDO
AF Price	£34.99

## Aladdin

This Disney-inspired platform adventure not only looks great, but it also plays brilliantly and earned a glowing *Format Gold* award in AF66. And now *Aladdin* can be yours for £10 off the RRP. AF games editor Stephen Bradley was so enchanted by *Aladdin*'s spell that he wrote: "It's just like being a real baggy-trousered sword-wielding little man in a cartoon in Khazadûm. Or somewhere".

● A1200 only

Description	Aladdin
Black code	AFAL
AF Price	£16.99

## Communicator III

If you have a CD<sup>32</sup> and an Amiga with Communicator, you can use your CD<sup>32</sup> as a CD-ROM - and it brings many new features, including AGA Viewer (view CD pictures and animations in 16.7 million colours), Virtual CD (select which menu the CD boots with) and more. Comes with software and leads to connect to the serial port.

**Communicator needs at least 1Mb Chip RAM and Kickstart 2 or 3.**

<b>Description</b>	<b>Communicator III</b>		
<b>Order code</b>	<b>AMF505</b>	<b>AF Price</b>	<b>£69.99</b>

## Ami-FileSafe

The new standard filing system for the Amiga. Not only does Ami-FileSafe achieve greater speed and efficiency than FFS, it also brings the extra security of a filing system that can survive Guru meditations and crashes without causing disk block errors.

**NEW!**

<b>Description</b>	<b>Ami-FileSafe</b>		
<b>Order code</b>	<b>AFAFS</b>	<b>AF Price</b>	<b>£69.75</b>

## Datstore

The full version of our tremendous AF68 Coverdisk is available now. Datstore is a revolutionary database, which is accessible, sophisticated and powerful. The number of records is limited only by the amount of RAM you have available (minimum requirement 1Mb with WB2 or 3).

Easystart templates that come with the package include Club Membership, Recipes, Address Book, and a complete up-to-date Amiga Format Magazine Guide. Many commands are performed simply by clicking on icons, and multiple file editing allows several databases to be opened simultaneously. A ground-breaking release.

<b>Description</b>	<b>Datstore</b>		
<b>Order code</b>	<b>AFDAST</b>	<b>AF Price</b>	<b>£49.99</b>

## TechnoSound Turbo Pro

The latest version of this brilliant sampling software was reviewed in AF76. It's fast enough to produce samples at higher-than-CD quality and has more than enough features for most beginners. If you want to get into sampling, this is the one.

**NEW!**

<b>Description</b>	<b>Technosound Turbo Pro (8-bit)</b>		
<b>Order code</b>	<b>AFTTP</b>	<b>AF Price</b>	<b>£29.99</b>

## Tiger Cub Manual

To get the most from your excellent Tiger Cub Coverdisk (AF66), we are offering the official 100-page manual from Dr T's Music Software for the special price of just £9.99.

Featuring in-depth articles on getting started, the tape recorder, the graphic editing display, menus, instruments, drum kits, quickscore, tables of assignments and much, much more.

<b>Description</b>	<b>Tiger Cub Manual</b>		
<b>Order code</b>	<b>AFTCM</b>	<b>AF Price</b>	<b>£9.99</b>

## PageSetter 2: The Manual

To enjoy the full benefits of the brilliant AF63 PageSetter 2 Coverdisk, you need the official manual. Learn how to design, create and print your own leaflets, posters, party invites and stationery with in-depth tutorials.

The manual also contains information on importing format images, formatting text, drawing structured illustrations and a full listing of keyboard shortcuts.

With our Coverdisk and the full manual a whole new world of Amiga design and desktop publishing will open up before you.

<b>Description</b>	<b>PageSetter 2: The Manual</b>		
<b>Order code</b>	<b>AFM/PSM</b>	<b>AF Price</b>	<b>£9.99</b>

## A500+ And A600 1Mb RAM Upgrades

A600 version shown

If you have less than 2Mb RAM, you are at a serious disadvantage, so why not upgrade at this low price. These boards for the A500 Plus and A600 plug into the Amiga's trapdoor connector. Built to the highest standards, they are fully guaranteed for a year.

<b>Description</b>	<b>A600/A500+ 1Mb RAM Upgrade</b>		
<b>A600 code</b>	<b>AF6H1M</b>	<b>AF Price</b>	<b>£29.99</b>
<b>A500+ code</b>	<b>AF5P1M</b>	<b>AF Price</b>	<b>£29.99</b>

## Syndicate American Revolt Missions

If you thought the original Syndicate (91%, AF49) was tough, the American Revolt Missions Disk will test your skills to the absolute limit in a series of 21 fiendishly difficult missions.

You can't buy this exclusive disk in the shops or from any other magazine, but you need a copy of the original four-disk game to use the Missions Disk.

<b>Description</b>	<b>Syndicate Missions Disk</b>		
<b>Order code</b>	<b>AMFDS</b>	<b>AF Price</b>	<b>£12.99</b>

# It's a free world!

For just **£5** you can treat yourself to a back issue of *Amiga Format* complete with creative Coverdisk programs and great game demos – or discover one of our special editions.

## Get The Most Out Of Your Amiga

A special edition of the latest in the popular series. Includes loads of info on graphics, DTP and more. Free with AF77.

### MORE GREAT ISSUES

**AF76** October 1995

**Coverdisks:** Demos of the excellent file manager, *InfoNEXUS 2*, plus, packaged with *InfoNEXUS*, is *Optonica's* new multimedia database, *DataNEXUS*. *TimeKeepers* is the game.

**AF75** September 1995

**Coverdisks:** The Maxon Magic Workbench enhancement system, exclusive Odyssey training level.

**AF74** August 1995

**Coverdisks:** Convert pictures between formats with *Transition* and become a footie manager in *Player Manager 2*.

**AF73** July 1995

**Coverdisks:** Use the complete version of sampler *Technosound Turbo 2* to edit and create sound effects. Plus, play around with a five-hole demo of *Sensible Golf*.

**AF72** June 1995

**Coverdisks:** Add JPEG support to your software with *Pinger* and create a book with *Magic Storybook*. Plus *Virocop* demo and 10 years of the Amiga feature.

**AF71** May 1995

**Coverdisks:** Make music with the full version of *Bars&Pipes Professional* and thrill to our *Death Mask* and *Alien Breed 3D* alien-blasting demos.

**AF70** April 1995

**Coverdisks:** Wordworth AFC, an exclusive version of the outstanding Wordworth word processor, plus *King Pin* and *Bubble 'n' Squeak* game demos.

**AF69** March 1995

**Coverdisks:** Exclusive demo of the incredible 95%-rated *Photogenics* image processing program plus *Super League Manager* game demo.

**AF68** February 1995

**Coverdisks:** Special demo version of *Digitia's* new *Datastore* database and four action-packed levels from *Sensible's* sensational *Cannon Fodder 2*.

## InfoNEXUS/DataNEXUS

You'll find two great demo utilities on the AF77 disks. *InfoNEXUS* is a file manager while *DataNEXUS* is a configurable multimedia database.

## TimeKeepers

A tremendous three-level demo of the rather fantastic puzzler that's had Bradley confused for weeks.

# AMIGA FORMAT COVERDISKS

This is the full *Real 3D Classic* package that will let you create some incredible rendered images on even a 1Mb Amiga.

They're small, definitely not big. They form an army of little troops. And they can be found on our game Coverdisk.

Imagine playing *Cannon Fodder* mixed together with the control interface of *Lemmings* taking place on cute domestic backgrounds.

## Tiny Troops

Imagine playing *Cannon Fodder* mixed together with the control interface of *Lemmings* taking place within the confines of cute domestic backgrounds such as sand pits and kitchen floors and you've just about sussed the idea behind *Tiny Troops*.

We've brought you an early demo of the game, so be patient with some of the functions. Some don't work the way they should and others are limited in their importance. Due to the fact that we wanted to get the disk to you this month rather than next, there's no sound to speak of.

Right, now that you know the limitations of the demo, let's get to grips with the game itself. It's imperative that you familiarise yourself with the double-click, the arrow pointer and the issuing of commands. Check out the annotated diagram on the page for more information on the control icons themselves.

To select a single troop, double-click on him. A pointer will appear above his head showing that you are now in control. To move him select the arrow button (middle icon on the bottom row of icons) and point to his destination with the left mouse button.

Don't worry about obstacles, he's intelligent enough to walk round them. It's unlikely to happen in this demo, but, if required, you can use the right mouse button to mark out a path that he'll take.

To order him to attack, select the Fist icon (top left control icon). Now point to an enemy character and away he goes. It's best to gang up on the enemy if you want to win.

Also, take a careful look at your troops. One of them has got a little grenade above his head. He is your Grenadier and he is capable of destroying the enemy's disc by lobbing grenades at it. A case of *Amiga Format*

This is the first level in its entirety. You'll never be able to look at a box of Fisons again without thinking of *Tiny Troops*.

An exclusive, never-seen-before demo of *Tiny Troops*, a game that crosses the mechanics of Lemmings with the playability and strategy of Cannon Fodder. **Steve McGill** takes time out from playing around to explain some of the basics of getting to grips with the demo.

## GET TO GRIPS WITH THE GAME

### TOP ROW STARTING FROM LEFT

**1.VIEW BATTLES:** Move to the next battle in progress. Easy for checking troops' performance.

**2.LOAD/SAVE:** Unfortunately disabled for this demo, but it's nice to know that it's going to be there in the full game.

**3.PLAY VIEW:** Increases or decreases the size of the scanner in the bottom left-hand corner of the screen.

**4.INFO:** Not used in the demo. Gives feedback about the health and progress of troops.

**5.HOME:** Full retreat by every troop back to home base. Can be useful if the base is under attack.

**6.RADAR:** This isn't going to be included in the final game because it duplicates the scanner.

### BOTTOM STARTING FROM LEFT

**1.ATTACK:** All out attack on enemy's home base. Not recommended unless you're feeling suicidal.

**2.ATTACK:** Once one or several troops are selected, this will send them out on the warpath.

**3.GUARD:** Surrounds troop with a rescalable circle. This is the area the troop will guard with its life.

**4.REJUVENATE:** If a troop's energy has fallen, this will top it up to at least half strength.

**5.SELECT PATHS:** Not available on this demo.

**6.MOVE:** Sends troop to destination of your choice. Using the right mouse button selects a path.

**7.GROUP:** Surrounds a chosen troop with all remaining troops for protection.

Hold down the mouse button and drag a box round as many troops as needed. Then give them an order.

handshakes to the person who manages this on all of the levels.

To select a group of troops, draw a rubber-band round them. You can then send them to their destination in a variety of formations. Select which from the buttons on the right.

Finally, it's worth experimenting with the various icons, if only to discover the new strategy and tactics that *Tiny Troops* makes allowance for.

Hope you like the demo. Any feedback, positive or negative, let us know.

When a whole troop has been selected, the formation they move in is chosen from the right.

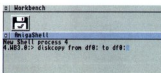

It's best to gang up on enemy troops. It might not seem fair, but it's the best way of winning the level.

## BACKING UP YOUR COVERDISK

Copying your Coverdisk is really very simple. Just follow the stages below...

**1** Boot up with your Workbench disk and find the Shell icon, in your system drawer. Double-click on this to go into the Shell.

**2** Type in the following line exactly as it appears here, taking care to put the spaces in the correct places:

DISKCOPY FROM DFO: TO DFO:

**3** When asked for the Source disk, insert your write-protected Coverdisk and press Return. All of the info on this disk will then be copied from the disk into memory.

**4** Once your Amiga has read the info, it will ask for the Destination disk. Insert it and press Return. All information on this disk will be destroyed.

**5** On an unexpanded machine, the Amiga may ask for the source disk again, because it copies in chunks. Finally, type **endcl** to close down the Shell.

## DISK NOT WORKING?

We take every care to test the Coverdisk software, but Future Publishing cannot accept any responsibility for any damage occurring during its use. If your disk is faulty, send it back, including an SAE, for a free replacement to:

Amiga Format (insert name of disk)  
Disk, DisCopy Labs Ltd, PO Box 21,  
Davertry, NN11 5RT

The editor window is where you will create 3D models. The gadgets are explained in the book.

On the cover of this issue, you'll find the booklet that explains exactly how to use and get the most out of *Real 3D Classic*. All you now need to know is how to use the Coverdisk. The full package takes up four disks, so we've obviously had to archive them! Don't worry, though, it's very simple to unpack, because the whole process is automatic.

Before you start, you need to format four spare disks, since you'll need four blank disks to unpack the program – refer to your manual if you need help doing this.

Now, put the *Real 3D* Coverdisk into your internal disk drive and reboot your Amiga (i.e. turn your machine off and back on again). The disk will set up the first disk and then ask you to insert the first spare disk, so that it can unpack on to it. When that disk is finished, you'll be

# Real 3D

If you haven't noticed yet, *Real 3D* is this month's astounding Coverdisk. Here's **David Taylor** with details on how to get it up and running.

Rendering a final image will be achieved through skillful use of this window – again, read the book.

asked to put the Coverdisk back in the drive; do so and then put the next spare disk in when asked. All four disks are automatically unpacked for you like this. When you've finished, you'll have four unpacked disks, called Real1-4.

You can now boot your Amiga with Workbench and use the full *Real 3D* program. If you have a hard drive, then on the first disk, you'll find an installation icon, which will copy all the files to the hard drive and also assign the volume real: to the destination directory.

If you are running from floppy, you don't need to worry about this, but will find that you get some messages if you double-click on certain icons. This is because the icons have the default tool set to look for this "real:" volume.

You need to change the icon tools to sort this out. To do this, click once on the icon and

then select Information from the Icon menu on Workbench. Click where you see the default tool line, and change it. For instance, on disk four you can find some example pictures. These are set to use the display program on real: (real:display), and you need to change this to use display on real disk one (real1:display).

Here's a quick guide to the main files on each of the four disks:

**Disk One (Real1):** Real (the main program), Display (to view rendered images), InstallHD (to install *Real 3D* to a hard disk), Textures (a folder containing example textures), Objects (a folder including examples objects).

**Disk Two (Real2):** TurboReal (a version of the main program for use with Amigas with FPU's), Accessories (a folder with extra libraries), Textures2 (more textures).

**Disk Three (Real3):** Contains a full 3D font.

**Disk Four (Real4):** More of the fonts and the example pictures.

This quick guide should help you overcome any small technical difficulties you may experience when getting *Real 3D* running. I must stress that you only need to worry about this if you aren't going to use the program with a hard drive. If you do have a hard drive, install the program to it to try it out.

It doesn't copy any files to any other directory, so it's easy to un-install. Even if you don't do this, you may never need to make any of the changes mentioned above.

That's it. Get modelling!

DT

The rendering options cover many resolutions and screenmodes, including greyscale – it's all in the book given away with this issue.

# Classic

## Three great offers from Amiga Format and Activa!

### Upgrade to version 2.5 of Real 3D

Take advantage of the new, improved interface and enhanced rendering modes of this more advanced version of *Real 3D*. This version also features the ability to apply properties such as gravity to your scenes and the animation features are far more advanced. It also features inverse kinematics and object skeletons – a must for complicated object animation. *Real 3D v2* was awarded 96% in *AF46*.

**Normal Price £200 – SPECIAL OFFER £175**

### Upgrade to version 3 of Real 3D

Version 3 of *Real 3D* is a power users tool. In our opinion, it comes with more powerful features as standard than any of the competition. With its updated interface and powerful new features such as post-processing effects, collision detection, shrink wrapping and many more. *Amiga Format* awarded *Real 3D v3* 93% in issue 74. Please understand, to get the best out of *R3D3*, you must invest time to learn how to use it.

**Normal Price £400 – SPECIAL OFFER £350**

### Buy the official manual

We will of course be running further tutorials in *Amiga Format* over the coming months, but you may like to take advantage of this special offer for the original manual which goes into great detail about all the features, functions and commands available in this powerful software.

**SPECIAL OFFER £25**

# AMIGA FORMAT PRESENTS

## New Order

The world of the Amiga has changed since Escom bought out Commodore. But who are Amiga Technologies; who does what and where do they do it? Next month, we bring you a definitive guide to the new world order, the location of distributors and territorial offices, the people in high places, their hopes and ambitions, and where we all fit in to this new scheme of things.

## FORMAT FORUM

Dale Bradford is  
your host  
for the page  
that gets the  
industry talking.

### Who would have thought that you can get so many laughs out of spending time in a computer shop?

**T**he idea behind this page is that we ask you a question and print the replies we receive in a forum format. We then send the correspondents an AF sweatshirt for their trouble. Last month we asked about your more memorable experiences of computer shops and this is what you said:

"Last year, I walked into the (now defunct) Wimborne computer shop Caltec with my dad," begins Andrew Crane of Bournemouth. "Playing on the shop's A1200 was a strange Tankslike game called *Total Wormage*. 'Is that a PD game,' asked my dad? 'No, I programmed it,' replied the spotty assistant. That Christmas, I was reading AF and I saw the spotty assistant's picture. At last he had got *Total Wormage* published, now called *Worms*. Congratulations should go to young Mr Davidson." Indeed, they should!

"In August 1994, I walked into Dixons with £300 in my hand to buy an A1200," remembers Harpreet Gagneja of Wembley. "I handed over the £300, but the assistant told me it was only £99 because Commodore was dead and they wanted to get rid of all the old stock." I wonder how Dixons held their, within a few months, A1200s became so scarce that they were being sold second-hand for prices higher than the original RRP?

Paul Newton of Belper recalls taking his mother into a computer shop: "Upon seeing some console on display, she asked one of the assistants whether you put the 10p pieces in, thinking it was an arcade machine. Oh, the shame."

"I was in Dixons looking for an A500, as I was hoping to buy that as my first proper computer," says Nick Donnelly of Ely. "I asked one of the staff if I could try some software with Workbench. He replied 'There is no need, Sir, the Amiga will be fine on the desk'."

"I needed a 1Mb upgrade," says Neil Darraugh of Portsmouth, "so my grandad took me to our local computer store. It was £64, which my grandad reluctantly paid. On the way back, we went inside a new shop to price-match. Their price was £47, so my grandad

bought it, took the other one back to the first shop and yelled: 'You are absolute crooks in this shop and I want a full refund on this as I can get it for £47 up the road'."

The astonished lady offered to price-match, but he continued: "I would not buy anything off you again, all you do is rob people". The lady gave us a refund, but my grandad still wasn't happy and said he was going to report them to the local paper and Commodore. In the end, the distressed lady called a male colleague to throw me and him out." Quite right, too!

Spencer Jarvis of the Imagine User group used to work for a retailer and

has ever achieved mainstream success. What, therefore, do you think the future holds for the 'Virtual Reality' headsets being marketed by Amiga Technologies? If they are to be a success, what will the 'killer' application be, that prompts us all to rush out and buy one?"

Please, share your thoughts with the AF community by writing to me at the address below:

Format Forum, Amiga Format,  
30 Monmouth St., Bath BA1 2BW.  
Or fax us at: 01633 896087.

### You are absolute crooks in this shop.

recalls a telephone call from a man who had just bought an Amiga, complaining that his mouse pointer kept disappearing. The customer returned the machine, Spencer tested it and found it to be working fine: "When I moved the mouse in a figure of eight, the man looked at me with a puzzled expression. He told me that he hadn't been using the mouse like that. He demonstrated by picking up the mouse, placing the bottom of it flat against the screen and moving it around. The pointer was disappearing because it was going underneath the mouse."

I had many other funny experiences and a colleague even had a

### He picked up the mouse, placing it flat against the screen.

woman return floppy disks because they weren't floppy! Computer shops, eh? All human life is contained therein.

Thanks to everyone who responded to this question. For the next month, can I ask you to consider the following:

"Over the years there have been many add-ons produced to 'enhance' the gaming experience, from the reasonably sensible, such as light guns, steering wheels, footpads, etc., to the frankly bizarre. None of them, to date,

### How to contact us

The best way to get an answer from Amiga Format is to make sure you're addressing your letter to the right person.

1 We get hundreds of letters and faces a day, so we can't reply in person.

2 Amiga Format is available for vital enquiries by phone every Sunday between 10.30am and 1pm.

3 Our advertising complaints department can be reached by calling Sophie Collins on 01225 482264, or e-mail: [meep@futurenet.co.uk](mailto:meep@futurenet.co.uk).

**WORKBENCH:** We'll only answer technical problems in the mag.

Workbench, Amiga Format,  
30 Monmouth Street, Bath BA1 2BW.

**GAMEBUSTERS:** If you've found a cheat code, or found the passwords for a game, send them to Steve McGill and you could win a prize. If you're stuck, ask Helping Hand for advice. Steve McGill, Gamebusters, Amiga Format,  
30 Monmouth Street, Bath BA1 2BW.

**READERS' LETTERS:** The letters pages are there for you to air your views. Remember not to ask questions that should be in Workbench! Letters to The Editor, Amiga Format,  
30 Monmouth St, Bath BA1 2BW.

**COMPETITIONS:** Write the answers and your name and address on the back of a postcard. 'The name of the competition', Amiga Format,  
29 Monmouth St, Bath BA1 2BL.

**SPECIAL OFFERS:** If you've ordered something from the AF Mail Order and you've got a problem, call our Mail Order department on 01225 922511.

AF Mail Order, Future Publishing, FREEPOST (S4500), Somerton, Somerset TA11 6BB.

**SUBSCRIPTIONS:** Send subscription enquiries to: AF Subscriptions, Future Publishing, FREEPOST (S4500), Somerton, TA11 6BB, or e-mail: [subscriptions@futurenet.co.uk](mailto:subscriptions@futurenet.co.uk)

**FAULTY COVERDISKS:** If your disk is faulty, send it, enclosing an SAE, to: Amiga Format (insert name of disk) Disk, DiscCopy Labs, PO Box 21, Deventry NN11 5RT.

**E-MAIL:** Send E-mail messages to AF at: [infoformat@futurenet.co.uk](mailto:infoformat@futurenet.co.uk). Include the department in the subject line (Workbench, Letters etc.) If you write info in the subject line you will receive a list of all relevant departments.

**COVERDISK SUBMISSIONS:** Future Publishing only accepts Coverdisk demos and submissions on the basis that they may be incorporated into a Future cover-mounted disk, unless expressly stated in writing to the contrary.

# POWER CD-ROM

## power cd-rom

The Power CD-ROM for the Amiga 600/1200 plugs directly into the PCMCIA port and provides a direct SCSI-I and SCSI-II interface, allowing up to six additional devices to be connected. What's more the Power CD-ROM features a 'Hot-plug' which allows you to connect and disconnect the CD-ROM and any other additional devices even when the Amiga is switched on.

The CD-ROM drive comes with a SCSI interface, PSU, manual, audio lead, mains lead and software which includes Audio CD, CD32 Emulator, MPEG Film Decoder and Photo CD.
