

"I am sending you, with my compliments, the index of articles published in the latest volume of this journal. I invite you and your colleagues to submit suitable original articles for editorial consideration and rapid publication (three to six months after acceptance).

I hope also you will become a subscriber to this journal and/or that you will recommend its acquisition by your departmental or institutional library. Subscription rates and notes to contributors are given on the inside pages."

TOMIZO YOSHIDA—University of Tokyo

AIMS

This international journal is devoted to research into the development of biologically active substances, and into their mode of action at sub-cellular and biochemical levels.

Reports on studies of all types of cells (plant, microorganism, and animal) are published, in which emphasis is placed on biochemical pharmacology, including chemotherapy. It is hoped to stimulate research by collecting together in one publication investigations from different fields having fundamental problems in common.

In addition to printing original research papers, the journal offers immediate publication for Short Communications. Comment on previous articles, in the form of Letters to the Editors, will also be accepted when the Editors consider the contribution warranted. Selected Book Reviews are also published.

Full length papers will be published within about four months, and short communications within six to eight weeks after final acceptance of the manuscripts.

From time to time critical summaries will be published of the proceedings of Conferences and Symposia held on topics related to the biochemical aspects of pharmacology. Suggestions for conferences to be reported are most welcome, and should be addressed to the Regional Editors. It is hoped to publish such reports within about three months of the meeting.

The contents of papers shall be the sole responsibility of the authors, and publication shall not imply the concurrence of the editors or publisher.

Publishing Offices: Headington Hill Hall, Oxford (Oxford 64881)

122, East 55th Street, New York, 22

Annual subscription: (A) For libraries, £21 (U.S.A. \$60.00); (B) for private subscribers

£5 5s. (U.S.A. \$15.00).

M. M. AJRAKSENIN: The effect of the route of administration on the metabolism of 5-hydroxytryptamine. 8, 245-246	80

FEBRUARY

L. L. BENNETT, Jr., DONALD SMITHERS, CAROLINE TEAGUE, HARRY T. BAKER and PATRICIA STUTTS: Some effects of 4-amino pyrazolo (3:4- <i>d</i>)pyrimidine on purine metabolism	81
J. H. WEIKEL, Jr. and JAMES E. SALMON: Biochemical properties of N-Benzyl-N'-isopropylhydrazine	93
I. W. DELAMORE and W. H. PRUSOFF: Effect of 5-iodo-2'-deoxyuridine on the biosynthesis of phosphorylated derivatives of thymidine	101
L. C. BLABER and A. W. CUTHBERT: Cholinesterases in the domestic fowl and the specificity of some reversible inhibitors	113
A. E. F. H. MEIJER: A change in the shape of the pH activity curve of acid phosphatase in the liver and spleen of mice after intraperitoneal administration of macromolecular substances	125
W. R. STERLING, J. F. HENDERSON, H. G. MANDEL and P. K. SMITH: The metabolism of 1-amino-cyclopentane-1-carboxylic acid in normal and neoplastic tissues	135
A. HORITA: The influence of pH on serotonin metabolism by rat tissue homogenates	147
A. HAMPTON, E. G. HAMPTON and M. L. EIDINOFF: Nucleotides-III. Synthesis and effects with cells in culture of ¹³¹ I-labeled 5-iodo-2'-deoxyuridine-5'-phosphate	155
Short Communications:	
A. R. FREEMAN and M. A. SPIRITES: Effect of some phenothiazine derivatives on the hemolysis of red blood cells <i>in vitro</i>	161
M. HEIMBERG and IRA WEINSTEIN: A mechanism for the induction by carbon tetrachloride of fatty liver in the rat	163
P. GÖRÖG and L. SZPÖRNY: The depleting effect of vincamin on the cerebral serotonin level	165
A. GOLSTEIN and R. WARREN: Passage of caffeine into human gonadal and fetal tissue	166
D. P. RALL and WENDY SHELDON: Transport of organic acid dyes by the isolated choroid plexus of the spiny dogfish <i>S. Acanthias</i>	169
TI LI LOO and R. H. ADAMSON: The enzymic oxidation of certain folic acid antagonists	170
E. A. CARLINI and C. G. HUGGINS: Enzymic conversion of valine ⁵ -angiotensin-I into an oxytoxic principle by impure preparations of alpha-amylase	171
Book Reviews	175

MARCH

W. P. BURKARD, K. F. GEY and A. PLETSCHER: Differentiation of monoamine oxidase and diamine oxidase	177
W. G. SMITH: The effect of ethanolamine on changes in lung lipids induced by anaphylaxis	183
S. M. SCHANBERG and N. J. GIARMAN: Drug-induced alterations in the sub-cellular distribution of 5-hydroxytryptamine in rat's brain	187
PAUL B. HAGEN and E. ZEBROWSKI: Action of TM 10 (choline 2:6-xylyl ether bromide) and its β -methyl derivative on the conversion of dopamine to noradrenaline by chromaffin tissue	195

	<i>page</i>
J. E. CHAPMAN and E. J. WALASZEK: Inhibition of diamine oxidase by bulbocapnine	205
R. KATO, E. CHIESARA and P. VASSANELLI: Factors influencing induction of hepatic microsomal drug-metabolizing enzymes	211
R. KATO, E. CHIESARA and G. FRONTINO: Influence of sex difference on the pharmacological action and metabolism of some drugs	221
W. C. WATSON and R. S. GORDON: Studies on the digestion, absorption and metabolism of castor oil	229
LARS RONEBERG: Uncoupling of oxidative phosphorylation in rat liver mitochondria with desaspidin and related phlorobutyrophenone derivatives	237
I. ARTHUR MICHAELSON and H. GEORGE MANDEL: Some effects of 5-bromouracil on a thymine-requiring mutant of <i>Escherichia coli</i>	243
Short Communications:	
LEWIS S. SCHANKER: Concentrative transfer of an organic cation from blood into bile	254
LINCOLN T. POTTER, JULIUS AXELROD and IRWIN J. KOPIN: Differential binding and release of norepinephrine and tachyphylaxis	254
T. J. BARDOS: Consideration of chemical reaction mechanisms in relationship to the biological action of "dual antagonists"	256

APRIL-MAY

F. KALBERER, W. KREIS and J. RUTSCHMANN: The fate of psilocin in the rat	261
TIBOR ZSOLNAI: Versuche zur Entdeckung neuer Fungistatika—IV. Organische Schwefelverbindungen	271
BERNARD KRAMER: Isolation from human urine and preliminary characterization of a metabolite of "pyridine-2-aldoxime methiodide"	299
H.-D. FISCHER: Der Einfluss von Barbituraten auf die Entgiftungsgeschwindigkeit des Äthanol	307
ALAN BURKHALTER: The formation of histamine by fetal rat liver	315
RAYMOND A. GAITO and WILLIAM H. PRUSOFF: Studies on the metabolism of thymine and 6-azathymine	232
MORIFUSA ETO, JOHN E. CASIDA and TADAKO ETO: Hydroxylation and cyclization reactions involved in the metabolism of tri- <i>o</i> -cresyl phosphate	337
GLYNN P. WHEELER and L. L. BENNETT, Jr.: Studies related to the mode of action of actinomycin D	353
D. F. EVERED and HEATHER G. RANDALL: The absorption of amino acid derivatives of nitrogen mustard from rat intestine <i>in vitro</i>	371
INGER ENANDER, ANDERS SUNDWALL and BO SÖRBO: Metabolic studies on N-methylpyridinium-2-aldoxime—III. Experiments with the ¹⁴ C-labelled compound	377
FREDRIK BERGLUND, CARL-ERIC ELWIN and ANDERS SUNDWALL: Studies on the renal elimination of N-methylpyridinium-2-aldoxime	383
Short Communications:	
ARNOLD SCHWARZ: The effect of ouabain on potassium content, phosphoprotein metabolism and oxygen consumption of guinea pig cerebral tissue	389
JOHN N. FAIR: Reversal of mitochondrial inhibition of glycolysis by styrylquinolines	391
EDWIN S. HIGGINS: The effect of ethanol on GABA content of rat brain	394
ROBERT J. LEVINE: Inhibition of monoamine oxidase activity in sympathetic ganglia of the cat	395
A. KLÁLA PFEIFER, E. SZ. VIZI and EVA SÁTORI: Studies on the action of guanethidine on the central nervous system and on the norepinephrine content of the brain	397
A. M. HAENEN-SEVERYNS, M. VRANCKEN-PARIS, G. LEJEUNE, A. CASTERMANS and H. DIEU: Separation of a transplantation antigen	398
E. HABERMANN and B. KRUSCHE: Wirkung der Phospholipasen A und C auf Plasmalipoide und Erythrozyten <i>in vivo</i>	400
Book Reviews	403

JUNE

Editorial	
J. R. COOPER and M. M. KINI: Biochemical aspects of methanol poisoning	405
S. SYMCHOWICZ, W. D. PECKHAM, M. EISLER and P. L. PERLMAN: The distribution and excretion of radioactivity after administration of ³⁵ S-labeled perphenazine (Trilafon)	417
M. Y. CHU and G. A. FISCHER: A proposed mechanism of action of 1-β-D-arabinofuranosyl-cytosine as an inhibitor of the growth of leukemic cells	423

	<i>page</i>
E. SILVERSTEIN: Inhibition of certain mitochondrial oxidative enzymes by prophyryns and metalloporphyrins	431
L. SCHOTTE and N. NYGÅRD: The five-membered disulphide ring system—I. General chemistry and therapeutic aspects	445

NOTES FOR CONTRIBUTORS

Submission of Contributions

Original contributions should be sent direct to the Regional Editors: those from the American Continent should be addressed to Prof. N. J. GIARMAN; those from the European Continent to Prof. M. WELSCH; and those from the United Kingdom to Dr. P. ALEXANDER: authors from other countries may apply to any of these Editors.

Form of Contributions

Papers may be submitted in English, French, or German, in each case with an Abstract in English. The manuscript (including figure captions and references) should be sent in duplicate, and it must be typewritten with lines double-spaced. The form generally accepted by learned societies should be followed, with an Abstract, Introduction, Experimental section, Results, Discussion, and Summary: these sections may be combined, e.g., Experimental and Results, or Results and Discussion.

Abstracts and Summaries

The Abstract to each paper will be published in English, and will briefly summarize the essential contents. In addition, when the original paper is in French or German, a Summary in that language should appear at the end of the article.

Proofs and Reprints

Fifty free reprints will be provided, and additional reprints may be purchased at reasonable cost. A reprint order form will be supplied with the page proofs that are sent to the authors for correction.

Nomenclature and Abbreviations

Where possible, nomenclature and abbreviations should be in accord with internationally agreed rules. When an enzyme is first mentioned in the text, specification by its code number, preferably accompanied by its systematic name (as distinct from its trivial name), will be welcomed by the Editors, but not checked for correctness. Official names of drugs are preferred to trade names.

The following abbreviations may be used without definition, except in titles: CoA (for coenzyme A), EDTA, Tris (for 2-amino-2-hydroxymethylpropane-1:3-diol), DNA, RNA, FAD, NAD (*not* DPN, for nicotina mideadenine dinucleotide), NADP (*not* TPN). Accepted abbreviations may be used for 5'-ribonucleotides (GMP, IDP, UTP, etc), and for 5'-deoxyribonucleotides (dAMP, dCDP, TTP, etc.).

Temperatures denoted by an unqualified degree symbol^o are assumed to be centigrade. For solution strengths, percentages should be expressed by the sign %, followed in cases of ambiguity by w/w, w/v, or v/v (e.g. 5% (w/v) means 5 g/100 ml). In spectrophotometry extinction (*E*) should be used, rather than optical density.

The following sources give useful guidance on the preparation of manuscripts:

"Suggestions and Instructions to Authors," *Biochem. J.* 82, 1 (1962), reprints of which may be purchased:

"T.U.P.A.C. Tentative Rules: Abbreviations and Symbols for Chemical Names of Special Interest in Biological Chemistry," in *Report of the Commission on Enzymes* (I.U.B. Symposium), Pergamon Press, London (1961).

"Style Manual for Biological Journals," American Institute of Biological Sciences, 2000 P Street, NW, Washington 6, D.C.

Illustrations

Illustrations for reproduction should normally be about twice the final size required. They should be separate from the typescript with captions typed together on a separate sheet. Particular care is taken with the reproduction of photographs, and good quality originals should be provided. If line diagrams are well drawn, without weak lines, it may be possible to reproduce from them directly, or from clear photoprints. Figures for redrawing should contain all relevant details, with clear instructions for the draughtsman. The following standard symbols should be used on all line diagrams:

Tables

Tables should be completely intelligible without reference to the text. Each table, and every column, should be provided with an explanatory heading, with units of measure clearly indicated. The same data should not be reproduced in both tables and figures.

References

References are made by consecutive superior numbers in the text, the full reference being cited in a numbered list at the end of the paper. References should contain the names and initials of *all* the authors of each paper, together with the abbreviated journal title, the volume number, first page number, and the year, as follows:

1. I. B. WILSON, F. BERGMAN and D. NACHMANSOHN, *J. biol. Chem.* **186**, 693 (1950).
2. S. T. YOFFE and A. N. NESMEYANOV, *Handbook of Magnesium-Organic Compounds*, p. 380. Pergamon Press, London (1956).

The titles of journals should be abbreviated in accordance with *The World List of Scientific Periodicals*.

Footnotes

Footnotes, as distinct from literature references, should be indicated by the following symbols: *, †, ‡, §, starting afresh on each page. They should not be included in the numbered reference system. Footnotes should be used for references to unpublished work, personal communications, proprietary names of trade-marked drugs, and other material not appropriately referred to in the text or in the numbered reference list.

OTHER PERGAMON PRESS JOURNALS OF SPECIAL INTEREST

Comparative Biochemistry and Physiology: A monthly journal of animal Biochemistry and Physiology in which special attention is paid to papers approaching the subject from a comparative point of view.

Biorheology: A quarterly journal publishing papers specifically concerned with problems of deformation and flow of biological systems or materials directly derived from living organisms.

Neuropharmacology: A bimonthly journal publishing studies relating to drugs and substances of biological origin acting on the central and peripheral nerve system in animal and man.

"In order to assure your prompt receipt of those journals you desire, your order for the current year's subscription, and for previously published issues, should be sent promptly to any of the offices listed in this folder."
