NOTES FOR CONTRIBUTORS

Submission of Contributions

Original contributions should be sent to one of the Regional Editors whose addresses are given inside the front cover.

Form of Contributions

Papers may be submitted in English, French, or German, in each case with an Abstract in English. The manuscript (including figure captions and references) should be sent in duplicate, and it must be typewritten on one side of the paper with lines double-spaced and with wide margins. The form generally accepted by learned societies should be followed, with an Abstract, Introduction, Experimental section, Results, Discussion, and Summary: these sections may be combined, e.g., Experimental and Results, or Results and Discussion.

Abstracts and Summaries

The Abstract to each paper will be published in English, and will briefly summarize the essential contents. In addition, when the original paper is in French or German, a Summary in that language should appear at the end of the article.

Proofs and Reprints

A reprint order form will be supplied with the page proofs that are sent to the authors for checking. *Any corrections to proofs must be restricted to printer's errors.* Other than these, any substantial changes at this stage may be charged to the author.

Nomenclature and Abbreviations

Where possible, nomenclature and abbreviations should be in accord with internationally agreed rules. When an enzyme is first mentioned in the text, specification by its code number, preferably accompanied by its systematic name (as distinct from its trivial name), will be welcomed by the Editors, but not checked for correctness. Official names of drugs are preferred to trade names.

The following abbreviations may be used without definition, except in titles: CoA (for coenzyme A), EDTA, Tris (for 2-amino-2-hydroxymethylpropane-1:3-diol), DNA, RNA, FAD, NAD (*not* DPN, for nicotinamide-adenine dinucleotide), NADP (*not* TPN). Accepted abbreviations may be used for 5'-ribonucleotides (GMP, IDP, UTP, etc.), and for 5'-deoxyribonucleotides (dAMP, dCDP, TTP, etc.).

Temperatures denoted by an unqualified degree symbol ° are assumed to be centigrade. For solution strengths, percentages should be expressed by the sign %, followed in cases of ambiguity by w/w, w/v, or v/v (e.g. 5% (w/v) means 5 g/100 ml). In spectrophotometry extinction (*E*) should be used, rather than optical density.

The following sources give useful guidance on the preparation of manuscripts:

Suggestions and Instructions to Authors, *Biochem. J.* **98**, 2 (1963).

Terminology and Abbreviations, *J. biol. Chem.* **238**, 6 (1963).

Report of the Commission on Enzymes (I.U.B. Symposium), Pergamon Press, London (1961).

Style Manual for Biological Journals, American Institute of Biological Sciences, 2000 P. Street, NW, Washington 6, D.C.

Illustrations

Illustrations for reproduction should normally be about twice the final size required. They should be separate from the typescript with captions typed together on a separate sheet. Photographs should be included only where they are essential and must be in the form of good quality glossy prints. Wherever possible line diagrams should be in the form of good quality originals or clear photoprints from which it is possible to make direct reproductions.

Tables

Authors are asked to keep tabular matter to a minimum. Tables should be completely intelligible without reference to the text. Each table, and every column, should be provided with an explanatory heading, with units of measure clearly indicated. The same data should not be reproduced in both tables and figures.

References

References are made by consecutive superior numbers in the text, the full reference being cited in a numbered list at the end of the paper. Reference should contain the names and initials of *all* the authors of each paper, together with the abbreviated journal title, the volume number, first page number, and the year, as follows:

1. I. B. WILSON, F. BERGMAN and D. NACHMANSOHN, *J. biol. Chem.* **186**, 693 (1950).

2. S. T. YOFFE and A. N. NESMEYANOV, *Handbook of Magnesium-Organic Compounds*, p. 380. Pergamon Press, London (1956).

The titles of journals should be abbreviated in accordance with the 4th Edit. *The World List of Scientific Periodicals*.

Footnotes

Footnotes, as distinct from literature references, should be indicated by the following symbols: *, †, ‡, §, starting afresh on each page. They should not be included in the numbered reference system. Footnotes should be used for references to unpublished work, personal communications, proprietary names of trade-marked drugs, and other material not appropriately referred to in the text or in the numbered reference list, but should be kept to a minimum.

The Journal Will Publish:

1. **Original Research Papers** in the form set out in the notes for contributors.

2. **Short Communications** which may be presented without sub-division into sections such as Introduction, Experimental, etc.

The time for publication of Short Communications and full papers after acceptance by the editors will be approximately four months.

3. **Preliminary Communications** giving data of outstanding importance will be published as rapidly as possible. It is hoped that publication will take place about two months after acceptance but the publication delay will depend upon the actual date of receipt by the publisher after acceptance. This speed of publication will only be made possible through the checking of the proofs against the typescript at the publisher's office. It is therefore essential that the typescript should be absolutely accurate. A reprint order form will be sent out by the publisher on receipt of the accepted paper from the Editor, but proofs will be sent out only when specifically requested by the author at the time of submission. Preliminary Communications may not contain figures or complex tabular material and in general will not be accepted if they are longer than three pages (i.e. 2,000 words including the allowance for tables). The manuscript should be prominently marked Preliminary Communications.

4. **Reports and Reviews.** From time to time, critical summaries will be published of the proceedings of Conferences and Symposia held on topics related to the biochemical aspects of pharmacology. Suggestions for conferences to be reported are most welcome, and should be addressed to the Regional Editors. It is hoped to publish such reports within about three months of the meeting. Periodically an editorial will be published which reviews an active area of research in biochemical pharmacology with the aim of focusing attention on points of controversy and uncertainty. Suggestions for the publication of such editorial should be addressed to one of the regional editors.

The contents of papers shall be the sole responsibility of the authors, and publication shall not imply the concurrence of the editors or publisher.

MARCH

	page
L. BLUMQUIST and Å. HANNGREN: Fluorescence technique applied to whole body sections for distribution studies of tetracyclines	215
KINYA KURIYAMA, EUGENE ROBERTS and MORTON K. RUBINSTEIN: Elevation of γ -aminobutyric acid in brain with amino-oxyacetic acid and susceptibility to convulsive seizures in mice: a quantitative re-evaluation	221
ARTHUR J. PRANGE, JR., MORRIS A. LIPTON, ROBERT B. SHEARIN and G. NEIL LOVE: The influence of thyroid status on the effects and metabolism of pentobarbital and thiopental	237
B. SILVESTRINI, B. CATANESE and P. DEL BASSO: Researches on the increase of liver weight produced by some drugs	249
B. E. LEONARD: The effect of the chronic administration of barbitone sodium on labile compounds in the rat brain	255
B. E. LEONARD: The effect of the chronic administration of barbitone sodium on pituitary-adrenal function in the rat	263
ARNOLD J. FRIEDHOFF and LEO E. HOLLISTER: Comparison of the metabolism of 3,4-dimethoxyphenylethylamine and mescaline in humans	269
M. H. VAN WOERT and G. C. COTZIAS: Anion inhibition of monoamine oxidase	275
JOHAN H. STRØMME and LORENTZ ELDJARN: Distribution and chemical forms of diethyldithiocarbamate and tetraethylthiuram disulphide (disulfiram) in mice in relation to radioprotection	287
O. G. FAHMY, MYRTLE J. FAHMY and CHARMIAN E. DE VRYE: The mutagenic properties of the nucleosides of pyrimidine analogues in <i>Drosophila melanogaster</i>	299
S. GABAY and S. R. HARRIS: Studies of flavin-adenine dinucleotide-requiring enzymes and phenothiazines—II. Structural requirements for D-amino acid oxidase inhibition	317
TETSUO SATOH and TAKIO IWAMOTO: Neurotropic drugs, electroshock, and carbohydrate metabolism in the rat	323
ROBERT J. ROBERTS and GABRIEL L. PLAA: Effect of norethandrolone, acetoexamide, and Enovid on α -naphthylisothiocyanate-induced hyperbilirubinemia and cholestasis	333
JON M. STOLK and ROGER P. SMITH: Species differences in methemoglobin reductase activity	343
KENNETH E. MOORE: Amphetamine toxicity in hyperthyroid mice: effects on blood glucose and liver glycogen	353
R. W. DISNEY: A comparison of two methods for the measurement of cholinesterase inhibition in human blood	361
WILLIAM A. CREASEY: Tumour-inhibitory effects of combinations of the vinca alkaloids with actinomycin D	367
SORRELL L. SCHWARTZ, JUDE R. HAYES, ROBERT S. IDE, CARL B. JOHNSON and PAUL D. DOOLAN: Studies of the nephrotoxicity of ethylenediaminetetraacetic acid	377

Short Communications

DONALD G. HOFFMAN, WILLIAM F. BOUSQUET and TOM S. MIYA: Lycorine inhibition of drug metabolism and ascorbic acid biosynthesis in the rat	391
N. S. MIZUNO: Distribution of tritiated methyl ester of streptonigrin in mice bearing sarcoma 180	394
O. Z. SELLINGER and AURA GARAZA: The inhibition of cerebral glutamine synthetase by structural analogs of the convulsant <i>dl</i> -methionine sulfoximine	396
RICHARD P. SPENCER and FRANCA E. VISHNO: Inhibition of intestinal amino acid transport by dimethyl sulfoxide	399
D. G. JOHNS, A. C. SARTORELLI, J. R. BERTINO, A. T. IANNOTTI, B. A. BOOTH, and A. D. WELCH: Enzymic hydroxylation of 5-fluoropyrimidines by aldehyde oxidase and xanthine oxidase	400
ROBERT J. LEVINE: Variation in gastric histamine levels and effects of histidine decarboxylase inhibition in rats from different sources	403
MEYER D. LIFSCHITZ and HERBERT L. KAYNE: Cardiac myofibrillar ATPase activity in hypophysectomized or thyroidectomized rats	405
M. TIMAR, S. SAUVARD, A. BOTEZ, M. SIMIONOVICI, D. WINTER, C. M. GEORGESCU, C. CRISTESCU and TH. PANAITESCU: Pharmacological effects of some 6-azauracil derivatives	408

APRIL

A. K. PRINCE: A sensitive fluorometric procedure for the determination of small quantities of acetylcholinesterase	411
A. PLETSCHER, M. DA PRADA and G. BARTHOLINI: Temperature dependence of the passive in- and outflow of 5-hydroxytryptamine in blood platelets	419
H. M. REDETZKI, J. E. REDETZKI and A. L. ELIAS: Resistance of the rabbit to methotrexate: isolation of a drug metabolite with decreased cytotoxicity	425
B. A. KOECHLIN, F. RUBIO, S. PALMER, T. GABRIEL and R. DUSCHINSKY: The metabolism of 5-fluorocytosine- ^{214}C and of cytosine- ^{14}C in the rat and the disposition of 5-fluorocytosine- ^{214}C in man	435
P. M. KEEN: The binding of penicillins to bovine serum albumin	447
A. ALPERT, R. L. KISLIUK and L. SHUSTER: A simple radioisotopic assay for choline acetyltransferase and its application in the <i>Lactobacillus plantarum</i> system	465

Z. HUSZTI and J. BORSY: Differences between amine oxidases deaminating mescaline and the structurally related 3,4-dimethoxyphenylethyl amine	page 475
A. W. LESSIN, R. F. LONG and M. W. PARKES: Conversion of indolylalkylhydroxylamines to stimulant amines <i>in vivo</i>	481
ROLF HÅKANSON and CHRISTER OWMAN: Distribution and properties of amino acid decarboxylases in gastric mucosa	489
Short Communications	
THOMAS S. S. MAO and JOSEPH J. NOVAL: Some relationships concerning the chemical structure, hemolytic activity, and therapeutic potency of phenothiazines	501
KONSTANTY WIŚNIEWSKI and ANDRZEJ DANYSZ: The influence of posterior pituitary hormones on drug passage into the tissue	504
G. A. DOMBRADI, IRENE CSÁNYI and GY. DOMJÁN: The analysis of changes in the activation energy of succinate dehydrogenase as influenced by some antitumour agents	508
Erratum	513

MAY

R. M. J. INGS, G. L. LAW and E. W. PARNELL: The metabolism of metronidazole (1-2'-hydroxyethyl-2-methyl-5-nitroimidazole)	515
R. M. WELCH, A. H. CONNEY and J. J. BURNS: The metabolism of acetophenetidin and N-acetyl-p-aminophenol in the cat	521
NICO M. VAN GELDER: The effect of aminooxyacetic acid on the metabolism of γ -aminobutyric acid in brain	533
W. N. ALDRIDGE and J. M. BARNES: Further observations on the neurotoxicity of organophosphorus compounds	541
W. N. ALDRIDGE and J. M. BARNES: Esterases and neurotoxicity of some organophosphorus compounds	549
D. G. JOHNS, A. T. IANNOTTI, A. C. SARTORELLI and J. R. BERTINO: The relative toxicities of methotrexate and aminopterin	555
J. R. BERTINO, A. T. IANNOTTI, J. P. PERKINS and D. G. JOHNS: Dihydrofolate reductase from guinea pig liver and small intestine	563
D. KUPFER and L. PEETS: The effect of <i>o,p'</i> DDD on cortisol and hexobarbital metabolism	573
C. C. PORTER, J. A. TOTARO, A. BURCIN and E. R. WYNOSKY: The effect of the optical isomers of α -methyl-p-tyrosine upon brain and heart catecholamines in the mouse	583
GEORGE ZOGRAFI and IVAN ZARENDA: The surface activity of phenothiazine derivatives at the air-solution interface	591
JAMES V. DINGELL and ELAINE SANDERS: Methylation of desmethylimipramine by rabbit lung <i>in vitro</i>	599
A. GIACHETTI and P. A. SHORE: Studies <i>in vitro</i> of amine uptake mechanisms in heart	607
EUGENE ROBERTS, DAISY G. SIMONSEN, HAYATO KIHARA and K. KANO TANAKA: Influence of intraperitoneally administered amino acids on amino acid patterns of Ehrlich ascites tumor cells and brain in mice	615
JOHN E. CASIDA, JUDITH L. ENGEL and YOSHIHIKO NISHIZAWA: 3',5'-Diesters of 5-fluoro-2'-deoxyuridine and thymidine: hydrolysis by esterases in human, mouse, and insect tissue	627
D. E. SCHWARTZ, H. BRUDERER, J. RIEDER and A. BROSSI: Metabolic studies of tetrabenazine, a psychotropic drug in animals and man	645
T. HARGREAVES and V. PRICE: The uptake of conjugated bilirubin by rat liver	657
Short Communications	
KONSTANTY WIŚNIEWSKI and ANDRZEJ DANYSZ: The study on the insulin controlling and directing of chlorpromazine action and level in brain tissue	669

JUNE

J. F. BARRETT, PATRICIA A. PITT, A. J. RYAN and S. E. WRIGHT: The demethylation of <i>m</i> -methyl orange and methyl orange <i>in vivo</i> and <i>in vitro</i>	675
P. W. TAYLOR, JR., C. A. CHIDSEY, K. C. RICHARDSON, T. COOPER and I. A. MICHAELSON: Subcellular distribution of norepinephrine in the normal and surgically denervated cat heart	681
S. G. KALYANPUR and BRENDA E. RYMAN: Some effects of local anaesthetics on cell metabolism	691
P. W. DAVIS and T. M. BRODY: Inhibition of Na ⁺ K ⁺ -activated adenosine triphosphatase activity in rat brain by substitute phenothiazines	703
GILBERT DURITZ and EDWARD B. TRUITT, JR.: Importance of acetaldehyde in the action of ethanol on brain norepinephrine and 5-hydroxytryptamine	711
SURENDRA S. PARMAR, L. D. JOSHI, K. KISHOR and R. KUMAR: Interrelationship of chemical structure and antiacetylcholinesterase activity of disubstituted quinazolones	723
T. L. B. SPRIGGS and M. A. STOCKHAM: Is N-hydroxyurethane an active metabolite of urethane in the rat?	729
D. K. MURALI and A. N. RADHAKRISHNAN: 5-Hydroxytryptophan decarboxylase activity in monkey and rat small intestine	735
ROSS J. BALDESSARINI: Alterations in tissue levels of S-adenosylmethionine	741

Short Communications

- A. VARDANIS: Activation of some organophosphorus insecticides by liver microsomes from phenobarbital-treated mice 749
- ÉVA GÁTI and ZOLTÁN KÖRÖS: *In vitro* decomposition rate of degranol in sensitive and resistant NK/lymphoma ascites tumors 753
