RE: Fig. 1, Fig. 2, and Experiment I of Table 1

Due to a mix-up in the ordering of mice strains, an inadvertent error was made in the selection of controls for our *c-src*-deficient mouse study during one period of our investigation, when C57 BL/6J mice were used as the *c-src* wild-type control counterpart for the *c-src*-deficient mice, instead of B6, 129-*src-tm1Sor*^{+/+} wild-type littermates. Because the former is a TCDD-sensitive, and the latter is a TCDD-tolerant strain, a direct comparison of these two would not be a valid approach to study the effect of *c-src*-deficiency on TCDD's toxicity. The examination of all shipping records from the Jackson Laboratory to date indicated that the mix-up occurred immediately prior to the experiments conducted to produce the data in Fig. 1, Fig. 2, and Experiment I of Table 1. Additional experiments verified this error. Therefore, we wish to withdraw these data from our publication.
