In "The Use of a Fluorescent Sterol to Investigate the Mode of Action of Amphotericin Methyl Ester, a Polyene Antibiotic," by D. B. Archer, pp. 195-201:

Further experimentation has shown that the extent of trivial reabsorption of the emitted radiation from dehydroergosterol by AME had been underestimated. Although the reversible nature of the polyene/sterol complex has been demonstrated, a value for the dissociation constant cannot be estimated.
