

The Green Flame

Surviving Government Secrecy

This lively and entertaining volume provides a first-hand account of secret defense research being performed in the years following the Korean War.

Author Andrew Dequasie shares his memories from the start of his work on the government-sponsored boron fuels project through his appointment to manage one of the first commercial plants, to the final government decision to kill the project. Backed up with documentation that has only recently been declassified, this volume paints a vivid and intriguing picture of the chemical and engineering challenges involved in the work as well as the perils faced daily by the researchers.

Written for the general public, *The Green Flame* explores the worlds of sabotage, explosions, and possible spy activity and explains why this billion dollar effort ultimately failed.
