Expression and Characterization of Four Recombinant Human Dihydrodiol Dehydrogenase Isoforms: Oxidation of *trans*-7,8-Dihydroxy-7,8-dihydrobenzo[*a*]pyrene to the Activated *o*-Quinone Metabolite Benzo[*a*]pyrene-7,8-dione, by Michael E. Burczynski, Ronald G. Harvey, and Trevor M. Penning*, Volume 37, Number 19, May 12, 1998, pages 6781–6790.

Page 6783. In column 2, line 31, the sentence should read as follows: Coding regions of DD2, DD4, and DDX (in the SP6 orientation) were excised from pCRII using *Nco*I and *Xho*I and were inserted into the *Nco*I and *Xho*I sites of the prokaryotic expression vector pET16b (Novagen).
