Multisite Mutagenesis of Interleukin 5 Differentiates Sites for Receptor Recognition and Receptor Activation, by Carmela G. Plugariu, Sheng-Jiun Wu, Wentao Zhang, and Irwin Chaiken\*, Volume 39, Number 48, December 5, 2000, pages 14939–14949.

Page 14946. The title for Table 2 should read as follows: Binding Parameters and Biological Activities of *E. coli*-Expressed Multisite Mutants of GM1<sup>a</sup>. Also, the straddle headings should read (left) direct binding of GM1 proteins to the immobilized IL-5R $\alpha$ -Fc and (right) binding of IL-5R $\alpha$ -Fc to GM1 proteins captured by 4A6 mAb.
